This is funny Jim, there is a thread about posting Spanish to the newsgroup, and once again you have nothing intelligent to add to the thread, just some 4th grade name calling. Why not share your thoughts on the thread? Are you so uneducated that you can not form even a general opinion or comment about the topic? Are you not able to discuss anything? Your posts certainly don't show any sign of an ability to debate or discuss a topic.

The best you could come up with was to say I had a bloated face and I am a grease ball? Which by the way had nothing at all to do with the subject. I've noticed over the years your posts never amount to anything but calling names, making accusations, posting pictures of anyone who points out your ignorance, and posting phone numbers and ISP information.

I've noticed an interesting trait that you share with people like Burt, LibNet, & Masa, you flame away with a bunch of meaningless statements and when someone calls you on it and actually want's to engage you on the topic your best response is to post a picture with cute line like "Any questions?" Are you afraid to engage someone in a discussion or do you simply not have the ability to intelligently discuss an issue?

Clearly your comment about being Spanish was a put down, now let's discuss it. Explain to me Jim, what is the connection between having a thick coat of grease on my fat bloated face have to do with being Spanish? I mean if your going to put someone down shouldn't the comment at least be funny or have some relevancy?

Tim, ka8ddz,

who is not holding his breath waiting for any type of intellegent reply from Jim.

It is possible to build very tight LC filters--as I recall a well designed inductor on a 2.4 inch diameter coil form will give you a Q around 700--this is good enough for building 2 pole bandpass fiters with 30 kHz bandwidth and 6 dB insertion loss on 40 meters. Lower loss filters can be made with larger coil forms and 1/4 inch copper tubing, but I think this is overkill.--Zack Lau W1VT

I am posting this for a friend, who is looking for a volt meter that "talks" to him... giving him in an audible voice what is being displayed on the readout screen. Radio Shack made them several years ago, but does not have them now. If anyone has one laying around they are not using, or knows of any distributor/manufacturer that has them, please respond direct to him. His email address is:
k7uc@juno.com
Thanks, Kay, N7KH

Ok if it work with other. how about the number of users? is it set to a
low number- that might get a busy. might check to parameter controling
which station can connect don't remember the name but it allows certain
station to be rejected. is there a local node? might try connecting to
the node and have the node connect to your mailbox.

Well Dave keep in mind that DOUBLING your outuput power only get's you 3db now if we consider an S-Unit to be approxamatly 6db that means going from 250 to 500 to 1000 watts only get's you 1 S Unit!

I love to run QRP when approprate, think about a 1000 watt signal being S-9 at a particular recieve site, 65 watts would be an S-7 at the same site! Get yourself a good radiator a well positioned dipole with 5 watts will get you a lot further than an antenna in a poor location/position with 500 watts.

>source was mentioned as being in the U.K. But regardless of the
>source, why didn't Bill confirm the story with the RSGB?

The following is a verbatim copy of the Newsline Text of the story.
From Newsline #1084 (c) Newsline. Decide for yourself if FISTS
is quoted or not. Also decide if it's mentioned.

UK CW: RSGB vs FISTS
The other hot topic heard across the Hamvention
floor had nothing to do with Amateur Radio in the
United States. Rather, it was two United Kingdom
ham radio groups on opposite sides of the issue of
continued Morse code testing.
Both the Radio Society of Great Britain and a group
called Fists had booths at Hamvention '98. The
R.S.G.B. is the national ham radio society in the
UK. Fists is a UK based organization dedicated
to the preservation of Morse code. It now has
chapters worldwide.
Two weeks ago, the R.S.G.B. announced that it will
support the abolition of mandatory Morse code
testing at a World Radiocommunications Conference
now slated for the year 2001. Peter Kirby is the
General Manager of the R.S.G.B.:
"The society made a decision to change its policy
and after a fairly lengthy period of consultation
visiting clubs, talking to people at the grassroots of amateur radio.
We are very aware, we made a survey of our
membership some three years ago. The results of
that survey were announced 24 months ago. And the
survey predictably said that our Class A license
holders wished to retain morse, compulsory morse
testing, but our VHF, UHF license holders wished to
do away with it. However we feel after discussions
that have taken place that there is a mood change
in the UK. Actually there is around the world, we
have not just spoken to UK Amateurs. We have

spoken to amateurs from this side of the water at
Dayton last year and European Amateurs atFredrickshaven." Peter Kirby
The R.S.G.B. decision to oppose continued mandatory
Morse testing has angered CW enthusiasts across the
UK. George Longren, G3ZQS, was the Fists
representative attending Hamvention '98. He told
Newsline that the R.S.G.B. is acting contrary to the
wishes of most British hams:
"This is an undemocratic action because the R.S.G.B.
did not consult anybody and it wasn't too long ago
they did take some sort of survey and the results
were positive in preference to keeping the morse
requirement. But what the R.S.G.B. has done. They
have done without the consent or consultation of
the members." George Longren, G3ZQS
What real power do Fists or any U.K. ham have to
oppose the R.S.G.B. position? Longren admits that
there is little that can be done:
"If you disagree with the national society, can you
go directly Radiocommunications Agency and say we
don't agree?" Bill Pasternak, WA6ITF
"No, we are not as liberal as that. What they say
goes." Longren
Longren says that when he gets back to England he
will be meeting with the Fists board of directors
to see what steps can be taken to keep Morsetesting alive.(Via Newsline)

Bob makes a good point.
Increasing penalties and escalating the War on (some) Drugs has increased the murder rate per 100,000 in a manner very similar to the other failed "drug war" Prohibition. If congress gets it's way we'll soon have a War on Tobacco, with smuggling and turf warfare amongst rival tobacco gangs go through the roof.

Yes, there should be background checks and a waiting period for handguns, but we should not restrict gun access by law abiding citizens anymore than there is now. Prohibiting or making guns inaccessible to rape victims is not the way to solve the countries problems.

>Thanks for any help.
>
>73 George in Phoenix
>
>

Well, while this may not be the sort of solution many would favor, I would drop the phone operation altogether until you have logged your fill of CW contacts.

If you MUST work fone and CW on the same band, consider using seperate transmitter and receiver. Dig out an old handbook and find schematic and construction article for an old-time Q-multiplier. These are a hassle to use, but should be able to reject CW interference to nearby fone operations if you use max freq separation.

An all-out effort at a maxed out filter/preamp unit would help too. You want a variable gain preamp to make up for the 10 dB or so that proper filtering will cost you, but you may need to turn the gain down or even bypass the amp altogether. Use your RF gain intelligently and you will avoid a lot of interference. I would pick just 2 or 3 freqs for phone and build some nice tight 4 pole LC filters, one for each freq. Try different AGC constants, too, and even disabling it. A slow AGC will probably be worse than a very fast attacking AGC or no AGC at all.

Another reason to use a separate reciever is that you may want separate RX and TX antennas. Try a Beverage or something like that for RX.

Use QRP as much as possible for CW, and QRO only when needed. I assume it is mostly interference by the CW station that interferes with your fone RX and not vice versa.

Another solution: forget about most or all the above ideas, and simply rotate the bands back and forth between he CW and fone stations. An hour on 40M CW and 20M fone, an hour on 20M CW and 40 fone, etc. You might still have some problems, but not as bad as when orking both modes on the same band.

Above all, have a good time and try not to get frustrated. Tell the fone guys to chill out and have a beer when they get frazzled, or let the CW guys work

fone for a while if you can pry the key out of his hand.

I have to agree with you in part.

A GOOD antenna is the key. If you can't here them you can't work them. A
good antenna will help you with your S/N ratio.

Power isn't very effective if it isn't radiated well. A large amp will let
you do your part in raising the QRM & QRN. Just think about it. You feel as
though the horn on your car isn't loud enough so you put a bigger one on.
Your neighbor doesn't think anyone can hear his because yours is louder, so
he gets even a bigger one. Now what was gained? QRM?

The more efficient your rig is the better.
Work on your antenna, Get it adjusted right.

Match your radio to antenna
Try not to over modulate, but push if to 90-95%.

You will be heard!

Jimmy's latest tantrum started May 22. He turned 36 on May 22 and as Jimmy has often said, he had a "reality" check. Yes folks, for once Jimmy did in fact have a "reality" check. At 36 years old, he's broke, married to a bowling pin almost 15 years his senior and not a dam dime in the bank! No education, no credit, no assets, and definitely n'O'brain.

Meanwhile, Jimmy has yet to figure out why everyone else has money, credit, families, and success! We all know the answer, but Jimmy will never figure it out! He's completely bankrupt, financially, morally, and most important, spiritually.

God Bless you Jimmy!

> Must be true, though, since I see you're not denying it.

Denying what? Saying someone has a bloated greasy face is an opinion not fact. What an idiot you must be not to recognize that. Actually let me stoop way down here to your level for a minute so we can communicate. I've noticed you've never denied being a spineless anon who will never identify himself, so it must be true. If not just site the post where you signed you name.

C'mon be a REAL man instead of the fantasy one you pretend to be behind the keyboard. Show us just how tough libnet is by identifying yourself. You talk so tough for someone who isn't man enough to stand behind his words. Your not unlike the Wizzard of Oz, big fire, big talk, , but in reality a little man at the controls.

Nevermind the anon behind the curtain. heh heh heh.

What a pitiful way to go through life, having everyone thinking your a complete moron and not even having a name.

Tim, ka8ddz

It is not because they don't see eye to eye with 'someone.' Persons who do this in one medium certainly do it in another. When in doubt, yell, swear, threaten. Look at the people they grant medical licenses to and admit to the bar for christ's sake! Amateur radio has a few more incompetents and trouble-makers (the Internet has a few *million* more), oh well. You should remember that these rubes say this stuff when they are happy, they say it in church, they say it tome their dearly beloved. x They enter it on forms when the question is 'occupation' or 'zip code' or 'blood-type.' Some people only *need* a vocabulary of 50 words or so, including plumbing noises.

Hello,

I just bought a CT22 Transceiver. After a CPU-reset (as described in the manual), the frequency-range seems to be limited to 144.000 - 146.000. This is, of course quite annoying, as I use my radio for Maritime and land-based rescue comm.
I have not found anything in the manual describing this situation, not to mention how to solve the problem.
I would be grateful for a response.

Regards,
Erik Westnes

If response thru mail, please remove "denial_"

I am currently working on at least 2 seperate articles on Amplitude Compandored Single Sideband use by Ham radio operators. Unfortunetly, there isn't a wealth of information on the subject available.

So, I am looking for any licensed amateur radio operators who are actually involved in the use of ACSSB on the air to provide me with some information on the mode, its uses, the equipment being adapted, etc.

Anyone interested in helping out can contact me by e-mail at <ko6ux@adi-radio.com>. Thanks!

3918. ARRL Open House

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-04 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6l52ag$ek3$1@nnrp1.dejanews.com>
Source record: 170728

The ARRL once again holds its open house this month. See the improvements made in the past year. An Olympic-size swimming pool has been added on the first floor. The mens and womens lavatories have been augmented with jacuzzis, with a by-appointment unisex saun common corridor. The foyer has been resurfaced in hand polished Vermont marble, and leather seating now greets visitors from distant lands like Iowa.

One of the most impressive additions is the Senate-style tram which now connects the HQ building with W1AW. The basement of W1AW itself, formerly wasted space, has been converted into a weight training facilty with nautilus equipment.

A walk outside W1AW will reveal the (seasonal) cappucino and croisant bistro, where W1AW operators dine al fresco as a cool summer breeze blows across the converted parking area, which now sports a Romanesque fountain and English-style flower garden. Of course, prior to this year it was announced that W1AW would become the personal contest station of multi-op expeditions from the HQ building.

The HQ building may be seen by appointment, in parties of 5 or less. Black-soled shoes will not be permitted.

3921. How important is TX power ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-04 00:00:00 UTC
From: Jennifer Lee <jennifer@calldei.com>
Message-ID: <01bd8f6d$d2a9ea00$0b25b3cd@jennifer.calldei.com>
Source record: 170731
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

After 20 years absent from ham radio I'm re-studing for my General exam.
I would appreciate any feedback concerning how important TX power is
for 'normal' ham radio use. Back when I was 14 ('78) I had an Kenwood
TS520s running about 120 watts through a badly grounded 1/4 wave vertical
and a few dipoles.
I rarely found this a limiting factor. I could usually contact anyone I
could hear.
Yet, some of my 'adult' ham friends at the time routinely used 500 or 1K
watts ...
I used to dream about having a 1K linear ... but simply couldnt afford it.
Now that I'm a self-sufficient adult with a significantly larger budget I
wonder about it still.
Certianly I can 'pound' the airwaves with a Kwatt linear if I wanted to but
is it really
any use ? First, I dont want to use more power than is needed, and secondly
no matter
how much power I've got I can never talk to anyone who I cant hear!

So whats the realistic ham world like nowadays ? If I got general purpose
Yaseu, Kenwood or Icon
HF rig with 100 - 120 watts would that be sufficient for simple-minded
rag-chewing and an occasional
DX ? I dont *plan* on setting up a huge Quad and trying to work distant
DX'ers, just a dipole or 2
and maybe a vertical, and some leasure rag chewing, maybe a few occasional
DX'ing, but nothing
serious. Would having 500 watts improve this in any way ? how about 1.5 K
?

Any feedback would be appreciated

Thanks,

-David Lee
(was KA6DHM .. still studing for my new license after 20 years absent)
FYI - living near Santa-Cruz, CA about 850 feet, on the side of a 1500 foot
'mountian'.

NCI is clearly a hate group bent on the extermination of Morse code and CW as a ham's way of life. Their statements show they are anti-Morsites. Their diabolical plan is to next displace tubes, moving transistors in to the areas where tubes used to shine brightly..These DTs will be scattered all over the world, where governments resources will be strecthed to their limits. Don't let this happen. Call or e-mail the Morse anti-defamation league or MORZCOR today.

Here's another little squirt of wisdom for ya. Read carefully and slowly
because it is very complicated.

"I'm My Own Grandpa" - Lonzo & Oscar
Composed by Moe Jaffe & Dwight Latham.
Recorded by many people, including Guy Lombardo, Phil Harris, Jo Stafford
("I'm My Own Grandmaw"), Homer & Jethro, and Ray Stevens.

From: paul@moore.com (Paul Maclauchlan)
Organization: Moore Corporation Limited, Toronto ON, Canada
Date: Thu, 3 Jun 93 11:53:25 GMT

From a previous discussion:

From: jonb@Ingres.COM (Jon Berger)
Organization: Ingres, an ASK Company
Date: 17 Dec 92 20:12:15 GMT

Here's what I've got stashed away, courtesy of Jeff Osier of SCO, and
complete with handy performance tips:

It sounds funny, I know,
But it really is so,
Oh, I'm my own grandpa.

I'm my own grandpa.
I'm my own grandpa.
It sounds funny, I know,
But it really is so,
Oh, I'm my own grandpa.

Now many, many years ago, when I was twenty-three,
I was married to a widow who was pretty as could be.
This widow had a grown-up daughter who had hair of red.
My father fell in love with her, and soon they, too, were wed.

This made my dad my son-in-law and changed my very life,
My daughter was my mother, cause she was my father's wife.
To complicate the matter, even though it brought me joy,
I soon became the father of a bouncing baby boy.

My little baby then became a brother-in-law to Dad,
And so became my uncle, though it made me very sad.
For if he was my uncle, then that also made him brother
Of the widow's grown-up daughter, who, of course, was my stepmother.

*** Note: I find it's generally a good idea to pause at this point
to allow the listeners time to process the ramifications

of that last stanza!

Father's wife then had a son who kept him on the run,
And he became my grandchild, for he was my daughter's son.
My wife is now my mother's mother, and it makes me blue,
Because, although she is my wife, she's my grandmother, too.

Now if my wife is my grandmother, then I'm her grandchild,
And everytime I think of it, it nearly drives me wild,
For now I have become the strangest case you ever saw
As husband of my grandmother, I am my own grandpa.

I'm my own grandpa.
I'm my own grandpa.
It sounds funny, I know,
But it really is so,
Oh, I'm my own grandpa.

I am not suggesting anyone be censored in any forum or format. I encouraged everyone to voice their opinions on everything, in the greatest detail. I just wanted to say that when someone espouses division, violence, and hate, I will simply exercise my "right" to point out that such opinions are wrong, intellectually indefensible, and immoral. Calling for separation of races is more in line with Chinese social policy than working against such bigotry

3935. Hy-Gain HyTower 18 HT vertical antenna FS in NE Ohio

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-04 00:00:00 UTC
From: W8EK@usa.net
Message-ID: <6l6382qpa1@nnrp1.dejanews.com>
Source record: 170745
Cross-posted to: rec.radio.amateur.antennas,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

I have a Hy-Gain Hy-Tower 18 HT vertical antenna for sale.

This is the large vertical with about 25 feet of tower, and extending for a total of about 55 feet. It is full size (no traps) on 80 thru 10 meters.

A tilt base is included.

We are moving June 10, and need to have the antenna picked up by then.

Only $150 picked up in NE Ohio.

73,

Ken, W8EK

> DX ?

I've been doing this for a long time and never have had an amp (thinking about it, though). I run 100 watts base and mobile; and I've had some nice DX contacts, and lots of ragchews, with the mobile -- which has definite antenna limitations.

You should be able to do well with 100 watts. If you have a "mountain" in the way, adding power will not punch thru it.

Best is to get a 100 watt radio and give it a try. YOu will need it anyway to drive any amp you might later buy.

Phil

We have a problem every year, with 40 meter phone interfering with
40 meter CW and vice versa. Does anyone have a solution for this
problem? We run 100 Watts on all stations and have tried differnt
kinds of filtering and maximum allowable separation etc.
Thanks for any help.

I personally used Super Morse. After trying to learn code on and off for years with tapes and listening to code on my receiver, I finally buckled down and studied with Super Morse. In 3 weeks, I passed my 5 wpm test...I SHOULD have tried for 13 wpm, because while taking my theory tests, I was copying the 13 in my head as it was going on in the background. :)

The only times I've ever seen this really solved is when the site
operates battery/QRP. What kind of radios are you using? Perhaps
something with a really strong front end would help, have a look at
the dynamic range and IP3 specs. Don't overlook the transmitter,
either - favor radios with lower transmitted IMD. However, you'll
really only solve it if you operate QRP ;-)

3941. Re: How important is TX power ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-04 00:00:00 UTC
From: Al Dolgosh <al.dolgosh@hamradio.org>
Message-ID: <3576B34F.735F@hamradio.org>
Source record: 170751
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

"If you can hear 'em, you can work 'em" is only true in a digital environment with no outside influences.

In the real world, QRM, QRN, and varying propagation conditions make this phrase inoperable. In most cases, the QRM and QRN are not reciprocally the same - so you may be able to hear a station since your local QRM/QRN is very low while that station has a very high QRM/QRN level.

It just depends on your desire to "work everything you hear".

For just plain ragchewing on 75 meters in the evening, you may find that 100 watts is adequate - until the QRM starts to build up and move in on you. Then you may have to terminate your QSO, or turn on the amplifier to get some "elbow room".

A 100 watt exciter is a reasonable power level for most conditions, but an investment in a "maximum power" amplifier is wise. Don't consider an increase from a 100 watt exciter to 500 watt amplifier (maybe 7 dB) - it is not an effective "return on investment" strategy. Go for the whole show. Also, every dB increase you get from an antenna works reciprocally on transmit and receive.

But, if you are 700 feet below the top of a mountain, you may find that your 850+ altitude is a real benefit in one direction only - the local utility company can't deliver you enough power to run a big enough amplifier to "burn your way through" the mountain in the other direction. Thsi is particulary critical as you move up in frequency.

And remember......if everyone drove the same size vehicle, we wouldn't be having this debate about whether SUVs are dangerous to smaller vehicle occupants in a collision! It doesn't hurt to have a heavyweight punch available when you need it.

> 73 George in Phoenix

There are two solutions of merit.

1. Teach the SSB folks to properly use RF gain control rather than
AVC control. (Ancient simple technique most SSB operators have
long forgotten).

2. Use gear with tuned front ends. Real RF stages for real tuning
of the receiver front end does amazing things to cure interference
when running multimode on one band. (Ancient simple technique most
modern equipment manufacturers have long forgotten).

Works for our crew. Good Luck on FD98!

>?

In most cases, with a good antenna, 100 watts is all the power you need.
There are a couple of exceptions. On 75m in the evenings during the
summer the static crashes from distant thunderstorms can raise the
noise level of the band to the point where use of 1.5 kW can be warranted.
And at times the interference from region one broadcasters on 40m can
warrant a power boost. On both bands, increasing output power is a
legitimate response to conditions. On 20m and above, IMHO, a better
response is to spend a bit more on a better gain antenna. That pays
better dividends on these bands.

Again IMHO, a jump in power of 10 db is needed for a worthwhile
improvement. So if you decide to use an amp, go the full gallon.
The half gallon amps are false economy. They're cheaper per
watt, but they don't deliver enough watts to make the difference

against the summer static or the SWBC interference.

When feasible, a better antenna is generally the most cost effective improvement you can make in your station. A few dollars spent on wire can deliver better results than thousands spent on more power. That's particularly true if you're currently using one of the severely compromised commercial vertical antennas. Even a basic dipole will generally out-perform them, and cost very much less. A wire beam will drive them into the ground.

A NEW idea?
I think not.
In the 1950's my brother, then W7WKM, had a HAM receiver adapter\
hooked up to his AM car radio.
I guess all that's old is new again.

> operates battery/QRP.

Generally, yes, but not necessarily. QRP is great and with QRP and
really good antennas (I speak from experience here), you can do as
good or better QSO-wise than QRO stations with poor setups and lesser
operator savvy. But, there is a great problem in how operators approach
operating on FD that is seldom (or rather infrequently addressed).

Premise: You cannot effectively operate radios on the same band for both
SSB and CW, UNLESS you operate the SSB stations on manual gain
control or have VERY TIGHT passband filtering systems.

IFF the SSB operators learn that they can advance the audio to about the
point where background hiss becomes significant above the noise floor
(with no antenna connected and no RF gain and no AVC), and then manually
control the RF gain, they can effectively overcome most or all of their
interference problem. In 30 years of running FD operations, I have yet
to have SSB overloading CW stations, but always CW overloading the SSB
stations. Poor modern front ends with no selectivity, coupled with
too much AGC on too much RF gain, is always the culprit on the SSB
stations, and unitil the operators learn how to run their stations to
get around that, the problem always persists.

You can by small ``filter'' blocks that help some, but most of those
are only good for band-to-band filtering, not inband filtering. The
only good way to overcome the problem is better front end tuning,
not passbanding (within limits).

Something to be said for real tuned circuits and real tuned front ends.

Good LUck All on FD 98!

"Agreeing" to serve implies that the membership asked them to serve.

Since this obviously wasn't the case, perhaps it would be better to
describe the current No-Code International Board of Directors as
carpetbaggers.

Hi Albert --- MARS is the acronym for "Military Affiliate Radio System".
A quote:
"MARS is a Department of Defense sponsored program, established as a
separate managed and operated programs by the Army , Navy, and Air
Force. The program consists of licensed amateur radio operators who are
interested in military communications on a local, national, and
international basis as an adjunct to normal communications."

For more info see URL:
http://www.dxer.com/mars.html

Elmers is not an acronnym but a Ham Buddy netwoking arrangement where
new hams can get help and tutoring from the "experienced" bunch.
For more information see URL:
http://www.ac6v.com/pagehh.html#H

Includes The Amateur Radio Elmers Resource Directory which explains the
concept and a Subject Quick-Search Index and a list of Elmers near you
that will most pleased to assist. Or questions and aid by E-Mail can be
used as well.

WE hav e to face the inevitable that expecially above 1 GHz some amatuer spectrum will e sold off. I propose an alternative to selling spectrum. The FCC should charge commercial interests based on what they make using the frequencies. I think 10% is very fair. A portion of every cell phone call would thus go to retiring the national debt. Since the airwaves are the birthright and property of all Americans, any profit from the use of them should be shared with all of US.

** Replace "gateheap" with "g8eap" to respond **

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1998 at the Castle Armoury in Bury on Sunday, the 6th September, 1998.

The Castle Armoury, known locally as the Drill Hall, is the same Venue as Last Year and is just round the corner from the Venue (the Castle Leisure Centre) used for a number of years previously. It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am, half an hour earlier for Disabled Persons. There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

Potential Exhibitors should write to Alan Moore, Exhibitions Manager, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB without delay as there are only a few

Stalls still available.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

** Replace "gateheap" with "g8eap" to respond **

WANT TO BECOME A RADIO AMATEUR?

Well, if you do and live in 'travelling distance' of Bury, why not take advantage of the excellent Tuition offered by Members of Bury Radio Society? The Society has just completed a Course of Instruction leading to the Radio Amateurs Examination held in May 1998.

Bury Radio Society proposes to run a similar Course commencing in September 1998, with Classes at the Mosses Centre on Tuesday Evenings, leading to the Radio Amateurs Examination in May 1999. If you are interested, send a Stamped Self Addressed Envelope marked "RAE 1999" to Mike Bainbridge, Secretary, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB no later than the End of June 1998 to reserve a Place on this Course.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, where it has its own Rooms, from 7.45 pm onwards and Visitors and Prospective Members of all Ages will be made most welcome.

There is a Large Public Car Park adjacent to the Mosses Centre which is on the opposite side of the Dual Carriageway (Angouleme Way) to the Open Market in the Town Centre of Bury, not far from the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway. The Centre is fairly accessible to the Disabled. There is a very comfortable Lounge Area with a Licenced Bar which has both Soft and Alcoholic Drinks at reasonable Prices. Please ring 0161 761 2079 during Office Hours for Directions to the Centre.

According to information published on the web by one of the Directors of NCI, they were not elected, but "agreed" to serve. The term of NCI Director is "indefinite." They make up guidelines/bylaws as they go along.

Sounds like a really member-driven democratic organization! Uncle Fred and his handpicked puppets!

Good point, Will!

Perhaps the FCC would be willing to do as the
motor vehicle dept does here in Arkansas.
A random digit code is assigned to those drivers
who do not wish to have their SSN printed on the
driver's license.

Yes, it is another entry in someone's database, but at least it's not
another illegal use of the SSN.

Yes I did say that, and if you will take note of W2ILP's previous
posting which was much longer than my posting. However, I would not
expect a friend of NCI to address the issues, any more than I would
expect a Democrat. Again, no one individual stands to profit from ARRL
actions.

Careful review of the NCI website does reveal other anomalies.

Additionally, the web page states:

3. Requiring manual telegraphy proficiency is not compatible with the radioamateur's mandated objective of contributing to the advancement of the radio art.

Operators of High Speed Meteor Scatter would disagree.

1.NCI is not opposed to manual Morse code operation. But CW it is just another mode and should not be afforded any special priority over others. It is available to those who wish to use it. Morse proficiency should not be required for those who do not wish to use the mode.NCI is not opposed to manual Morse code operation. But CW it is just another mode and should not be afforded any special priority over others. It is available to those who wish to use it. Morse proficiency should not be required for those who do not wish to use the mode.

A reasonable enough statement, endorsing the right to choose your mode. Yet if the number of HF operators were to swell due to the elimination of CW, would not the next logical foray be to petition the FCC for a growth in the phone sub-bands and a concomitant reduction in the CW bands. Ultimately, liberty could become license with CW being eradicated. Certainly not reasonable in a hobby setting, where all current radios for HF include CW.

Analyzer2000 ist an indispensable tool for every radio amateur and other people, working with signals in the audio frequency range.
It's running on Windows95/NT and needs no additional hardware, only a sound card!

download at
http://members.aol.com/btf1

features/benefits:
+superfast spectrum analyzer with full control over span, dynamic range and resolution bandwidth
-> switch your radio to SSB and you will have a professional IF-panorama for free!
+time analysis with oscilloscope and envelope display
-> use Analyzer2000 as a digital scope with trigger, grid, single shot and more!
+superhighspeed waterfall display with several coloring schemes
-> use this sonagram to see time/frequency agile signals with a resolution of less than 50us!
+several tools like level riding markers with delta function, averaging, peakhold...
-> measure fsk-shift, harmonic distortion or intermodulation with only a few mouse clicks!
+fft-based morse decoder
-> decode several CW signals within one band simultaneously with automatic speed and threshold control!
+realtime processing thanks to the multithreading architecture
-> do not lose any sample even on slow machines
+20 seconds post trigger memory
-> analyze the signal several times with different settings
+Snapshot and recording feature
-> save your signal to a wave file (last 20 seconds or all new)
+Analyzing of standard wavefiles
-> analyze signals from former sessions or other stations

Available or coming options:
+Low IF input on 11.025 kHz +/- 5 kHz for real IF analyzing capability
+TCP/IP server for remote controlled operation (via LAN/WAN) with multi client capability
+Baseband analysis with constellation diagram, phase diagram, frequency diagram for signal classification
+Demodulation of FSK/PSK signals with bit analysis

3987. The Great CW Battle

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-05 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6l9raoba1@nnrp1.dejanews.com>
Source record: 170588

It has been announced that on July 4th at Gettysburg, PA, The Great CW Battle of 1998 will be held. Permitted weapons for infantry include rapier wits, sticks and stones, walkers, canes, pacemaker stun devices.

Permitted mounts for cavalry to include motor scooters, three wheel adult bicycles. Weaponry for officers will be pre-1990 handheld radios when employed as a sidearm.

Air forces will be permitted, but planes must be incapable of speeds greater than 100 mph. "Dumb bomb" projectiles allowed by treaty:

1 Collins S Line
2 HW-101, HW-100
3 Alpha 76
4 Decommissioned broadcast transmitters

The objective of the Great CW Battle of 1998 is for all hams to render all opposing hams unconscious by beating them over the head with the same old ideas repeatedly.

I have an ICOM 730 which I would like to repaint the covers and need to know where I can obtain the paint and what is the color name and paint number if anyone knows for this particular radio.....I believe the 740, 745, and 751 etc. are the same color.....So any infomation would be a help.....73's
WZ1U Steve

3989. Need an elmer, here!

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-05 00:00:00 UTC
From: "D. Rea" <gcs@netacc.net--NOSPAM>
Message-ID: <357874D4.3293CA5C@netacc.net--NOSPAM>
Source record: 170590

A question for all those wonderful hams out there in cyber-land...I have a 1/4 wave mag-mount vertical antenna for 2 meters, and lately it has started acting strange. It won't put out any power on transmit, and when I connect a multimeter or my oscilloscope between the center pin and the sleeve of the BNC connector, it shows that there's no resistance between them...ie. a short. Now I'm not really sure, but it doesn't seem like my radio should be transmitting into a shorted piece of coax!

Should I replace the coax? I re-stripped both ends with no improvement, and tried testing the continuity with only the biscuit connector on the end...no whip or mag base...connected. Still no beans. It has seen it's fair share of car doors and closed windows in its two years of existance...what do you think?

To reply to this message, be sure to remove "---nospam" from the reply-to address. This is insterted to prevent automated mail-spammer "bots" from getting my address and adding me to bulk e-mail lists. Thank you!!!

man to sign >there name/call.

You still don't get it, do you? This is not amateur radio. No callsign (identity) is required here. I choose to post anonymously and have every legal right to do so. Don't like it? Tough! Don't like AOL's policy of allowing anonymous posing to USENET? Too damn bad! The real world does not revolve around being able to verify everyone's identity and making sure they're "good in the callbook", as does the anally-retentive amateur radio community.

>Also, I don't even know Casey, except by his posts, and I don't think that
>qualifies us as "buddies". I notice you seem to have a lot of respect for

ARRL ASKS FCC TO DENY LMCC 70 CM GRAB

The ARRL has asked the FCC to immediately dismiss efforts by the Land Mobile Communications Council to gain primary access to 420 to 430 MHz and 440 to 450 MHz as well as other UHF allocations. The LMCC recently petitioned the FCC to reallocate the two 70-cm segments from the federal government to the Private Mobile Radio Service. Amateur Radio enjoys the use of 420 to 450 MHz on a secondary basis. In comments filed on RM-9267, the League said the LMCC proposed the switch "without establishing technical compatibility between PMRS operation and incumbent radio services in any of the bands sought."

The League said that existing federal government use of the spectrum precludes PMRS operation at 420 to 450 MHz. According to the ARRL, the petition fails to demonstrate any basis to withdraw the two band segments

from federal use, nor any compatibility between PMRS operation and either federal government or amateur use. In addition, the League said, the petition fails to justify displacing established amateur operations. The League pointed out that the amateur community uses the band for public service and public safety functions and that hams have "substantial personal investment" in equipment that's in regular use there. The ARRL urged the Commission to throw out this portion of the LMCC petition "without further consideration."

The League backed up its arguments by citing documents from the National Telecommunications and Information Administration (NTIA), which manages federal spectrum. "NTIA has made it quite clear that there is no possibility of additional sharing of the 420-450 MHz band, and the unique relationship between Federal radiolocation uses and the Amateur Service cannot be duplicated by PMRS users," the ARRL said.

The ARRL said that the LMCC petition was premature because it did not take adequate account of the benefits of spectrum refarming already initiated. The League suggested that PMRS users adopt available spectrum-efficient technologies to maximize their use of existing allocations before seeking additional spectrum at the expense of other users. The League also said that PMRS users should look into using the Commercial Mobile Radio Service (CMRS).

A copy of the League's comments is available at http://www.arrl.org/news/bandthreat/RM-9267/arrl-cmt.html. Selected comments on RM-9267 also have been posted to the ARRL Web site

MORE LMCC DEVELOPMENTS: SUPPORT FROM APCO; AAA ADMONISHED

The Association of Public Safety Communications Officials-International (APCO)--an LMCC member--has come down on the side of Amateur Radio to oppose reallocating 420 to 430 and 440 to 450 MHz from the federal government to the Private Mobile Radio Service (PMRS). APCO said it otherwise supports the rest of the LMCC petition, which sought additional spectrum elsewhere.

In comments filed with the FCC June 1, APCO cited "a long history of cooperation between public safety agencies and the amateur radio community, especially in coordinating disaster relief and other emergency efforts." APCO said ham radio "often provides the most effective and reliable on-scene and wide-area communications" after an emergency or disaster. Adding users to the spectrum would make it less useful for Amateur Radio, APCO said.

Meanwhile, in a letter to another LMCC member, the American Automobile Association (AAA), ARRL Executive Vice President David Sumner, K1ZZ, took Triple-A to task for misinforming its membership on the issue. Sumner said letters from AAA to ARRL members who wrote about the LMCC petition mischaracterized the role of the Spectrum Planning and Policy Advisory Committee (SPAC), of which Sumner is a member, and the positions of the SPAC and NTIA. The AAA's letters to members said that SPAC, cooperating with NTIA, worked up a plan that included changes to government spectrum that is shared by amateurs. Not so, Sumner told the AAA's Gary Ruark. "I can tell

you that at no time during my service on the committee has SPAC made recommendations or developed a plan such as you describe," he wrote. "Neither has the NTIA endorsed a reallocation of frequencies in the 420-450 MHz range" as the AAA had said. The Secretary of Commerce appointed Sumner to SPAC in 1994.

Sumner insisted that the AAA "correct the impression that your letter has left on those to whom it has been sent." An AAA member since 1974, Sumner said he joins those who have asked the AAA to disassociate itself from the portion of the LMCC petition affecting 420 to 450 MHz.

HAMS WEATHER STORMS

Hams activated weather-spotter nets and provided emergency communication as several parts of the US found themselves the target of violent weather in recent days. On May 30, a tornado wiped out the town of Spencer, South Dakota, killing six people. South Dakota SEC Jerry Gathright, WN0Y, reports one of those who died was the wife of Spencer's only ham, The Rev Ward Satterlee Sr, W0MON. Press reports say Gloria Satterlee, 70, died when the couple's house collapsed as they were headed for shelter in the basement. The tornado also demolished the Rev Satterlee's church, where his wife had played the organ and piano. Gathright says South Dakota has an active SKYWARN system using linked 2-meter repeaters.

Tornadoes, severe thunderstorms, hail, flooding, and power outages also hit several areas of the Eastern US. Five people died May 30 and June 1 when deadly storms swept through Pennsylvania, New York, Vermont and Massachusetts.

On June 2, tornadoes struck in Pennsylvania and Maryland. The Pennsylvania twister killed two people and injured several others. At one point, a funnel cloud passed within view of Pittsburgh's Three Rivers Stadium as baseball fans waited for the game between the Pirates and the Mets to resume following a rain delay.

In New York on May 30, golf ball-sized hail pelted Saratoga, but Mechanicville and Stillwater in Saratoga County--just north of the capital of Albany--were the most severely damaged. An F3 twister, with winds estimated in excess of 200 MPH, cut a swath up to a half-mile wide, damaging or destroying more than 75 homes and businesses. As bad weather approached, the Troy Amateur Radio Association conducted SKYWARN nets on 2 meters and 70 cm, before the repeaters were knocked out by power failures. Another 2-meter repeater served as a backup. In the storm's wake, emergency nets continued the day after the storm, and hams staffed Red Cross shelters and assisted with damage assessment. The twister that hit Mechanicville was one of 14 reported by the National Weather Service in Albany.

SKYWARN nets took to the air in New England as well. Some funnel clouds, hail and wind damage were reported in Massachusetts. Two men died when a tree fell onto the vehicle they were in.--thanks to Rob Leiden, KR2L; The Hudson Loop; April Stack, K2ZCZ

LAST US ASTRONAUT ON MIR DEPARTS

US astronaut Andy Thomas, KD5CHF--the last US astronaut scheduled to serve aboard the Russian Mir space station--is departing Mir after a four-month tour. Thomas will return to Earth aboard the shuttle Discovery, which docked with Mir June 4. The Discovery's commander for this mission is Charles Precourt, KC5YSQ. Also aboard is Mission Specialist Wendy Lawrence, KC5KII. News reports say that Thomas had his bags packed and was so eager to get back to Earth after four months away that he had already moved aboard the shuttle. Discovery returns to Earth June 12.

American astronauts have spent nearly 1000 days in space over the past three years as part of the shuttle-Mir program. Thomas' departure comes as the Mir experienced renewed problems with balky computers the week of May 31. Those problems were resolved in time for the Discovery launch to remain on schedule. More recent difficulties with a Ku-band antenna on the shuttle blacked out NASA's TV coverage of the shuttle's ninth and last shuttle-Mir docking. The only video available came from cameras aboard Mir.

Thomas took time to chat via ham radio with Australian countryman Tony Hutchison, VK5ZAI. Thomas, 46, also holds the special call sign VK5MIR. He described the docking as "a magnificent sight" and "a perfect docking." Said Hutchison, "Andy had real excitement in his voice and even uttered a few words in Russian." Hutchison says he has handled phone patches between Thomas and his family in Australia during his Mir stay.

The shuttle and Mir are scheduled to be linked for four days. No additional ham radio activity by Thomas is planned, although it's expected that the R0MIR packet system and the SAFEX repeater system will continue to operate after his departure. During his 130-day tour on the Russian space station, Thomas managed to complete 16 Mir-school contacts, more than during all of 1997 when Mir suffered a fire, a collision with a supply rocket, and several technical failures.

Plans continue on a delayed schedule to begin assembly of the International Space Station, which will be equipped with Amateur Radio. A recent meeting of the 16 countries involved in the ISS okayed an assembly schedule that begins in November--one year behind the original construction schedule as a result of Russia's money woes. Some news reports indicate that Russia could decide to de-orbit Mir as early as this fall in an effort to save money.

FCC TO TIGHTEN SCANNER RULES

The FCC plans to further tighten its rules on scanning receivers to prevent reception on cellular telephone frequencies. In a rulemaking notice released June 3, ET Docket 98-76, the FCC proposed to require receiver filtering adequate to prevent cell phone reception even when the receiver is tuned to frequencies outside the cellular telephone bands, such as an image frequency. To prevent modification of legal receivers to receive cellular frequencies, the FCC wants scanning receivers designed so that the tuning and control circuitry is "completely inaccessible," and that attempts to modify the receiver "will likely render the equipment inoperable." The proposed rules also would prohibit scanner kits.

The FCC said the proposals were in response to a petition (RM-9022) from Uniden American Corporation, which manufactures both cellular telephones and scanners.

The proposed rules would affect Amateur Radio equipment that includes scanning capability, as defined in the FCC rules. The FCC has invited comments on whether it should modify its definition of a scanning receiver to include units that can be manually tuned or which automatically switch among fewer than four frequencies.

The FCC wants to require that scanners provide at least 38 dB of rejection for cell band signals at any frequency the receiver can tune. The FCC also proposes that scanners be unable to receive a signal level of 5 mV/meter or less in the cell band at any tunable frequency.

The FCC suggested covering control and tuning circuits with epoxy or some other substance, or encasing them in a non-removable metal compartment, to make them impossible to access and modify. The Commission also plans to ban the import or manufacture of scanning receiver and converter kits capable of receiving cellular frequencies. Test equipment would be exempted from the definition of a scanning receiver, however.

The FCC also proposed modifying the rules to make it clear that modification of scanning receivers on a substantial scale to receive cellular frequencies would be the same as manufacturing, which already is illegal. The FCC took the opportunity to point out that it's still illegal to modify receivers imported or manufactured prior to the effective date of the current scanning receiver rules. Those rules became effective April 26, 1994.

The FCC has opened a 30-day comment window. The complete petition is available at the FCC Web site at http://www.fcc.gov/oet/dockets/et98-76/.

FCC NIXES EDAP TECHNOMED WAIVER REQUEST

The FCC has turned down a waiver request from EDAP Technomed Inc to operate its Prostatron medical device at 1.296 GHz at emission levels that exceed Part 18 of the Commission's rules. The Prostatron is used to treat benign hyperplasia of the prostate.

The FCC said that while it's "sensitive to the need to facilitate the availability of medical equipment and reduce costs," it decided to turn down the waiver "because of the threat of interference to aviation and Amateur Radio services." The 1.24 to 1.3 GHz band is allocated to the federal radiolocation service on a primary basis and is used for air traffic control radars. Ham radio is a secondary user.

EDAP got the NTIA (which administers federal spectrum) to agree to the waiver approach, if EDAP coordinated each installation with the FAA and got the agency's approval. But the FAA now seems to have squelched that approach. It submitted comments to the FCC last month opposing the waiver.

In a May 22 letter to EDAP, the FCC's Richard M. Smith called EDAP's arguments "unpersuasive" that there would be little risk of interference to hams. Smith, who's chief of the FCC's Office of Engineering and Technology,

said EDAP had only addressed moonbounce communication and had not responded to concerns about interference to amateur propagation beacons and calling frequencies.

The FCC said the Prostatron can comply with the FCC's rules "when installed with proper shielding." Smith's letter advised that no rules waiver is necessary to install and operate the device in a shielded environment. But, Smith emphasized, "EDAP is responsible for ensuring that the equipment it markets and installs complies with the existing rules."

NEW RECORDS AND CLOSE ONES: VHF LOOKING UP!

Reports of long openings on 6 and 2 meters continue to show up on the reflectors and at ARRL Headquarters, suggesting that conditions on these two popular VHF bands are looking better all the time.

On May 29, John Moore, W4UE, in Florida (EM90) reported "a very good contact" on 2 meters with KF7UV in Nevada (DM08). "He peaked 20 over S9 and rapidly disappeared within two minutes," Moore said. He calculated the distance at 2270 miles or 3652 km "which is 157 miles longer than the previous record," he said. At the same time, he was hearing stations in Texas and Oklahoma.

He reports that 6 meters also was open. Others also have reported good openings on the Magic Band in recent weeks.

Jon Jones, N0JK, reported a couple of near-record-breaking contacts between US stations and Oscar, CO2OJ on 2 meters. On May 14, CO2OJ (EL83) worked N0JK and W0EKZ (EM17), both in Kansas, a distance of 2120 km. The next day, CO2OJ worked W1LP (FN41) in Massachusetts, a distance of 2350 km. Citing the Claimed North American DX Records compiled by Al Ward, W5LUA, Jones says the 2-meter tropo (A) record (tropo across the Atlantic, Caribbean and Gulf of Mexico) is 2365, set by W1JSM and VP5D in 1988.

Also on May 14, Jones says, N0KQY in Leoti, Kansas (DM98) near the Colorado border, heard CO2OJ work K5CM in Oklahoma, then fade out. "This is almost 2400 km," he said.

According to Tad Cook, K7VVV, N7DB in Oregon reports good 6 meter openings recently, with regular contacts between the Pacific Northwest and the rest of the US and propagation across the continent nearly every day. Cook also heard reports of 6 meter contacts between Europe and the Caribbean!

Dave Finley, N1IRZ, in New Mexico (DM54), reports that 6 meters has been "fantastic" the past couple of weeks. "Last Thursday (May 28), I was hearing both coasts, some of them working each other on double-hop!"

SOLAR REPORT

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was up over the past week. Sunspot numbers averaged 16 points higher than the previous week and solar flux was up by almost nine points. The average solar flux for May was 106.7, which followed 108.3 for April, 109.2 for March, 93.3 for February and 93.4 for January. Average flux values jumped

from February to March, and have remained at about the same level since then. The outlook for June calls for an average solar flux possibly 10 points higher than May.

For June 5 through June 7, the predicted solar flux is 113, 114 and 112, with Planetary A index around 14, 12 and 10. Solar flux is predicted to rise above 115 around June 11, and peak around 120 from June 16-19. It may fall to 110 by June 27, and unsettled geomagnetic conditions may return around June 8, 17, and 19-21.

With a rising solar flux and longer days, look for improved 15 meter conditions during daylight hours.

NASA reported this week that two comets were observed plunging into the sun, followed by a mass ejection of solar gas. The solar event was thought not to be related to the comets passing into the sun.

Check http://umbra.nascom.nasa.gov/comets/SOHO_sungrazers.html for pictures.

Sunspot numbers for May 28 through June 3 were 47, 44, 62, 62, 59, 71, and 65, with a mean of 58.6. The 10.7 cm flux was 98.4, 95, 96.1, 94.2, 100.1, 104.7, and 113.1, with a mean of 100.2. The estimated planetary A indices were 7, 19, 25, 7, 6, 7, and 12, with a mean of 11.9.

MICHAEL KARP, N2FM, SK

Michael J. Karp, N2FM (ex-AF2L), of Old Bridge, New Jersey, died May 24. He was 59. Karp was a co-recipient of the 1995 Philip J. McGan Silver Antenna Award (with Joe Phillips, K8QOE). Karp, an ARRL Public Information Officer, was cited for his success in promoting coverage of nontraditional Amateur Radio stories, including young hams, MARS, and digital and packet techniques. He also contributed to QST as well as to The Hudson Loop, the Hudson Division newsletter. Loop Publisher Richard Sandell, WK6R, said he was "deeply saddened" to learn of Karp's passing. "Ham radio has lost a most valuable human being and today we are all a lot poorer for it. His wit, his sense of right and wrong, his dynamic personality were the hallmark of a giant," Sandell said. Karp was a member of the ARRL and a member and major contributor to the Central Jersey Radio Association (formerly Old Bridge Radio Association) for almost 20 years. Services were May 26.--thanks to The Hudson Loop and Art Chapman, KC2CA

CIE FOUNDER, BROADCAST ENGINEER CARL E. SMITH

The founder of Cleveland Institute of Electronics, Carl E. Smith of Brecksville, Ohio, died May 2. He was 91. Smith founded his correspondence school with 16 students in his home in 1934. It later became CIE and eventually enrolled more than 150,000 students in the US and overseas. The school once was a regular QST advertiser. A graduate of Iowa State University and Ohio State University, Smith enjoyed a long and wide-ranging engineering career. He engineered the US Navy's high-power, very-low-frequency transmitting facility, NAA, at Cutler, Maine, used to communicate with submerged submarines. He also designed antenna systems for the Voice of America and developed the first commercial FM station in

Cleveland. He was the engineer for WHK for more than 20 years. He also worked on military operational research, worked as a consultant, and held many patents, including ones for the spiral slot antenna and the three-slot cylindrical antenna. He was inducted into the Broadcasters Hall of Fame in 1992 and into the National Religious Broadcasters Hall of Fame in 1994. An interesting sidelight: Smith's father bought the house depicted in Grant Wood's famous painting, "American Gothic." Smith restored and maintained the house, which he gave to the state of Iowa in honor of the 100th anniversary of Wood's birth in 1991. Six children and a sister are among his survivors.--thanks to Ron Mayer, W8KYD, and The Cleveland Plain Dealer

---

IN BRIEF:

* This weekend on the radio: The QRP TACtical Contest is June 6. Just ahead: The ARRL June VHF QSO Party and the TOEC WW Grid Contest are June 13-15. See June QST, page 87, for details.

* ICOM Funmobile visits HQ: The ICOM Funmobile, a 30-foot motor home packed with working ICOM amateur, marine, SWL, and family radio service gear, visited Newington, Connecticut, on June 3. The equipment complement features a working Amateur Radio Station with an IC-775DSP, an IC-746 and an IC-756. The Funmobile spent some time at ARRL HQ, parked next to W1AW, and HQ staff members got a chance to check out what's inside and to marvel at the rooftop antenna farm. It's designed to rise up or lie flat at the push of a button. Retired ICOM America Amateur Division Manager Chuck Northcutt, W7SRZ, has been behind the wheel of the Funmobile for the past 10 weeks now and plans to take a break. He'll turn driving duties over to another ICOM staffer. Including a stop at the Dayton Hamvention, the Funmobile has visited nearly half the states and a couple of Canadian provinces. Following its visit to HQ, the unit rolled across town for a stop at Lentini Communications, an Amateur Radio retailer. Photos of the Funmobile's HQ visit are at http://www.icomamerica.com/ontheroad/photos/arrl.html. That rotary spark gap transmitter is really Hiram Percy Maxim's "Old Betsy," now on display at W1AW.

* Vanity update: The FCC in Gettysburg reports it has processed vanity call sign applications received through May 14. On June 2, the FCC issued 57 new call signs. Another 46 applications ended up in the work in process (WIPs) stack and await processing.

* Outgoing SM honored: At the recent SeaPac Convention in Seaside, Oregon, ARRL President Rodney Stafford, W6ROD, presented a Meritorious Service Award to outgoing Oregon Section Manager Randy Stimson, KZ7T, of Portland, Oregon. Stimson, 66, steps down as Oregon's SM on July 1 after more than 10 years of volunteer service.--thanks to EWA SM Kyle Pugh, KA7CSP

* QST Cover Plaque Award: John Hansen, W2FS, won the May QST Cover Plaque Award for his article, "An Inexpensive Remote-Base Station Controller Using the Basic Stamp," on page 33. Congratulations, John!

* Amateur Radio proclamations: The week of June 21-28, culminating in Field Day, is Amateur Radio Week. Alabama, New Jersey, New York, North Carolina, and Texas are among the states that have issued official proclamations honoring the hobby. Former ham and New York Gov George Pataki,ex-K2ZCZ, New Jersey Gov Christine Todd Whitman, and North Carolina Gov James B. Hunt Jr went the extra mile to proclaimed the entire month of June as Amateur Radio Month. Efforts are under way to get Pataki and Whitman to participate in a variety of presentation ceremonies and Field Day activities. Alabama Gov Fob James Jr proclaimed June 22-29 as Amateur Radio Week. Lawrence Thompson, KE4RPX, says last year, Gov James also supported the Alabama QSO Party by personally signing the contest certificates. A similar proclamation was issued by Mayor Emory Folmar in Montgomery, Alabama. In Texas, Gov George W. Bush proclaimed June 6, as Amateur Radio Day, coinciding with the start of the West Gulf Division Convention in Arlington, Texas. Most of the proclamations cite Amateur Radio's contributions during emergencies and specifically mention Field Day, June 27-28.

* Updating Callbook listings via e-mail: The Radio Amateur Callbook now lets you update or correct your listing in the CD-ROM by e-mail. Station licensees may send changes to 103424.2142@compuserve.com or ral@injersey.com. The Callbook CD-ROM appears in May and November. The Callbook stopped publishing its hard-copy editions last year. The Callbook CD-ROM is available from ARRL. It's item 6591 and costs $49.95. See the ARRLWeb, http://www.arrl.org/catalog/index.html, for ordering information.

* GB50MKI special event: Special event station GB50MKI will be active from June 7 until June 30 to help celebrate 50 years of computing. June of 1948 saw the birth of the first stored-program electronic digital computer at the University of Manchester in England. The machine was known as the Manchester Mark 1. GB50MKI will transmit on all bands using SSB, CW and FM, and data modes. Satellite operation is planned. A commemorative QSL will be issued. For details, see http://www.gb50mki.org/.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Burt Fisher was awarded the coveted third degree black belt in Kenpo Kar
a te at cermonies held in Osaka, Japan this week. Mr. Fisher, who holds
U.S. call K1OIK and Japanese call 7J1OIK was previously awarded the
first degree black belt in Tai Chi by former President Suherto of
Indonesia. Fisher notes with pride that the "Lone Ranger" theme music
used on his wb page is to establish the metaphoric link between himself,
the Japanese love of Western films, and Walker, Texas Ranger.

Burt will return to the states later this week after attending a brief
meeting of the G7 in Tokyo, and consulting with Boris Yeltsin on the
situation in South Asia.

I'll belch in your face as well as behind a mic. A mic is just more fun
more people can hear it! BUUUUUUUUUUURP!

4033. social security numbers and licensing

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-05 00:00:00 UTC
From: wwhite@imap1.asu.edu
Message-ID: <6l83rq$8ni$1@news.asu.edu>
Source record: 170634

I have read in magazine and heard on the internet that the FCC will soon be demanding license applicants furnish their social security numbers on new applications and renewals. THough this information will not be public, it does raise some concerns about privacy, and misuse of data, whether or not it has the approval of policy makers. I can't think of any reasonable need the FCC has for knowing your SSN, since it does not report income, or verify an applicants right to work in the US. The SSN is a financial marker, and Congress EXPLICITLY prohibited any other use in 1936. If this is true, I propose that amateurs everywhere protest this pending measure with the FCC directly and with elected officials. This is just another thinly weiled step in the progression towards a society where the government and corporate interests can track you everywhere, and control your livlihood, movement, and social and political activities. Add to this the fact that personal information in government and private databases has been demonstrated to have a nearly 30% error rate, and the prospect is frightening. When can I get my shiny new government identity card, complete with DNA sample?

Check your skirt, Drew... your slip is showing!

FYI, Yogi Berra was probably the most famous catcher the game of baseball ever produced. He was famous not so much for being a great catcher, though he was no slouch and in fact defined the position for a generation of players, but was mostly famous for his butchery of the English language, in a semi-intentional, tongue-in-cheek manner that captured the public's attention. Mostly, he was "master of the obvious", and the redundant phrase, almost magical in his use of the non-sequitur. "Deja Vu, all over again" is one example. "It ain't over till it's over" in place of the commonly heard, in that time, "It ain't over till the fat lady sings", a caricaturesque reference to the opera. He was loved by many, and quoted by more, and you can probably find a book of his best one-liners through Amazon.

As far as I know, Yogi Berra was never known to post to the r.r.a. newsgroups, and I may be wrong, but I don't think he is still with us. No, I am not accusing Yogi Berra of being you. How could I ever do that to such a great guy? I was simply reminded of a certain other person with a similar line in his sig to the "Where's that big ol' CBDanbo.... line. I thought ol' Yogi's most quoted quote was appropriate there, and I gave credit where credit was due.

You lose again, Drew.

Cycles was renamed after Heinrich Hertz in his honor. Personally, I still use
kC and MC on CW since it is shorter, but Hertz generally in everyday speech.
They are indeed exactly the same, but the Nomenclature Police will probably
give you a good workover for using "MegaCycles" now.

Sorry, Lidnet. No name, no credibility. put your call up there, OM.

Or at least do something more entertaining, more brilliant than just calling names. Come up with something good if you want to make a point from behind "the cloak". Your remark lacks humor, imagination, cunning, and... well, I was gonna say insight, but I'll let that go. We have a sense of humor here, but it takes a pretty clever stroke of wit to set it off properly.

Not even if you put on a dress, Drew. I like the way you dance around the issue of a post when you reply. You never give a direct answer when somebody asks you about your identity, or why you continue to flame and spew from behind your aol sscreen name when practically everybody else is enough of a man to sign there name/call.

Also, I don't even know Casey, except by his posts, and I don't think that qualifies us as "buddies". I notice you seem to have a lot of respect for him, though, calling him Sir. Very admirable.

Sorry... you lose again. Drew

I think Kevin would be horrified if he noticed just who was presuming to speak for him. I vehemently disagree with his philosophy, but I sense he does have a little bit of pride. He did answer me, BTW, and we let it go and did not continue ragging each other. Also, by the head count vote of the court of public opinion, I would say that the majority of users here agreed that this was not a venue for race issues anyway. Also, If I don't wish to read them, I will not read them. I will not go away. If I want to read them and offer a dissenting opinion, I will. If I want to point out that it is divisive to post such here, or that it is severely off topic, I will. If I choose to support his views, I will.

You lose again. Drew.

When the change was announced, QST ran an article (in the April issue, of course) on how to convert cycles to Hertz. There were graphs on log paper, conversion formulas, and finally, for those with no engineering background, a chart which could be easily memorized in its entirety:
1 = 1
2 = 2
3 = 3
Etc.

I chose option #3.

>names.

It has been demonstrated that if you don't respond, they will go away.
Unfortunately, there are a number of people who feel they absolutely have to
have "the last word" on a subject. Consequently, we never ever get the final
word. Someone else always has a comment.

The key is to walk away from the verbal fight. Skip over the messages without
reading them. And remember that something inflammatory posted to this newsgroup
will have very little effect on the real state of things. It's just people
blowing smoke.

The benefits of ignoring Trolls: You will have more time for the hobby, and
your blood pressure will stay normal.

Cycles and Hz are not the same thing. Cycles per second and Hz are the
same thing.

>For years things were named for the people that developed them...
>The unit of resistance was named for Mr. Ohm ...The unit of voltage
>was named for Mr. Voltaire

The volt was named for Alessandro Volta, the Italian physicist.
Voltaire was a French writer/philosopher.

> ...The unit of current was named for Mr.
>Ampere, but for some reason, the principle of AC voltage going
>through a cycle of 360 degrees, was called cycles for many years..
>Along about the 60's or 70's, some standards group

In 1960 the Conference Generale des Poids et Mesures adopted the
International Systems of Units (Systeme International d'Unites) which
we call the SI version of the metric system.

> decided that the
>cycle name should be changed to honor the person that developed that
>principle, Mr. Hertz (not the rental car guy)...Yes, they are the
>same, but many old timers, like myself, get set in our ways and like
>to call things the way we learned them many years ago...And there is
>still a lot of old equipment out there that is marked in cycles,
>but all new stuff is marked as Hz...

They also replaced the old uuF (micro-micro Farad) units with the
picoFarad.

It is nice to honor those who did early research but I prefer a
descriptive name in many cases. Cycles per second allows a mental
picture; air pressure measurements in pounds per square inch are
more meaningful to me than Pascals. Alas, the older units didn't fit
with the standards.

Regards.

Dave

The problem is not the rate of acceleration, which you correctly pointed out is pretty much always 1.0G on the surface of the earth.

The problem is not really the speed attained, either. The old adage, "speed kills" is not exactly true.

The REAL problem is the rate of negative acceleration (i.e., rate of deceleration) when the falling object impacts on the ground. The rate of deceleration _IS_ related to the terminal velocity, if the amount of time needed to go from terminal velocity to zero velocity is at least approximately constant.

If the radio fell from a sufficient height to reach a terminal velocity of 9.8 meters per second, impacted on the pavement, and decelerated to a velocity of zero in one second, the deceleration rate would be -1.0G; but if the radio decelerated from 9.8 meters per second to 0.0 meters per second in 0.01 seconds, the deceleration rate would be 980 meters per second per second, or -100.0 G!

Perhaps this helps to explain why falling onto concrete is more damaging than falling onto carpet. Concrete doesn't "give" much during impact, so the deceleration time is very small, giving a large negative G. On the other hand, carpet "gives" from the time of first contact until the object finally reaches zero velocity, so the deceleration is spread out over a longer period of time, giving a less severe negative G.

I am convinced that the FT-50 is rugged. I am also convinced that it is NOT indestructable. Both convictions are based on my own personal experience. Mine has survived many accidental insults without any discernable damage, and it suffered a damaged LCD display after falling from the top of my van to the asphalt pavement. (No, I didn't set it up there and absent-mindedly drive away. I was crawling around on the roof of my van setting up antennas for the 432 Sprint contest as a rover, and accidentally knocked over the radio that was sitting on the roof with me.)

From Tad Cook, K7VVV
Seattle, WA June 5, 1998
To all radio amateurs

SB PROP ARL ARLP023
ARLP023 Propagation de K7VVV

Solar activity was up over the past week. Sunspot numbers averaged 16 points higher than the previous week and solar flux was up by almost 9 points. The average solar flux for May was 106.7, which followed 108.3 for April, 109.2 for March, 93.3 for February and 93.4 for January. Average flux values jumped from February to March, and have remained at about the same level since then. The outlook for June calls for an average solar flux possibly 10 points higher than May.

Over Friday through Sunday this week the predicted solar flux is 113, 114 and 112, with the Planetary A index around 14, 12 and 10. Solar flux is predicted to rise above 115 around June 11, and peak around 120 from June 16-19. It may fall to 110 by June 27, and unsettled geomagnetic conditions may return around June 8, 17, and 19-21.

With a rising solar flux and longer days, look for improved 15 meter conditions during daylight hours.

On the VHF front, N7DB reports good six meter openings recently, with regular contacts between the Pacific Northwest and the rest of the United States, with propagation across the continent nearly every day. Reports were also received concerning six meter contacts between Europe and the Caribbean.

NASA reported this week that two comets were observed plunging into the sun, followed by a mass ejection of solar gas. The solar event was thought not to be related to the comets passing into the sun.

Check http://umbra.nascom.nasa.gov/comets/SOHO_sungrazers.html on the web for pictures.

Sunspot Numbers for May 28 through June 3 were 47, 44, 62, 62, 59, 71 and 65 with a mean of 58.6. 10.7 cm flux was 98.4, 95, 96.1, 94.2, 100.1, 104.7 and 113.1, with a mean of 100.2, and estimated planetary A indices were 7, 19, 25, 7, 6, 7, and 12, with a mean of 11.9.

The whole reason rec.radio.amateur.swap was created was to get these posts out of the other discussion groups. We have a perfectly good group for swaping - use it.

To everyone else, I recommend not responding to any swap message on a non swap group. Only when people stop getting results will they stop doing it.

Before you flame me, think about it for a second - why do we have rec.radio.amateur.swap?
Of course, maybe the solution is to get rid of the r.r.a.swap as unnecesary.
If your answer is "use the filtering feature", again I ask why do we have seperate groups? To sort out discussions by topic. I hope we can all be reasonable about this.

June 5, 1998
Target: rec.radio.amateur.misc

NOTICE: To receive this news bulletin free, each week via email, simply contact us at w8mmq@hotmail.com, and ask to be placed on our mailing list. Each week we cover news and information pertaining to the amateur radio community.

Welcome to The W8MMQ Wire for Friday, June 5, 1998. This news bulletin serves as the official news source for the Radio Society of Central Michigan, and is made available free to all radio amateurs.

We encourage you to pass this bulletin along to others, and feel free to use the contents on your club nets, at your meetings, or in your own newsletters and bulletins. We only ask that you give credit to W8MMQ or the Radio Society of Central Michigan in some way. Thanks!

In this issue, we will have information on a new special event station from Manchester, England; Senator Goldwater is now a silent key; an update on the RSGB decision to abolish the Morse code requirement for HF; W1AW will operate Class A during Field Day; and more!

New Special Event Station Celebrates Computing
==========
A special event station, GB50MKI, will be on the air from Manchester, England, from June 3 through July 1. The group organizing the event are celebrating the 50 years since the "birth" of computing. It was in June of 1948 when the first stored-program electronic computer, called the Manchester Mark I, became operational.

The special event station will operate on all amateur bands, using modes SSB, CW, FM, and digital. Special QSL cards are available for those who contact the station. For complete information, visit their web site at http://www.gb50mki.org/.

Senator Goldwater Now a Silent Key
==========
Senator Barry Goldwater, who held the amateur radio callsign K7UGA, died on May 29. Senator Goldwater was a outspoken conservative and once ran for President in 1964. He even tried to tie his amateur radio hobby into his campaign with the "Hams for Barry" fundraiser.

Goldwater was first licensed in 1921, and enjoyed the hobby. He often said that is was a relaxation for him ... a way to escape from the pressures and stress of politics. Of note, Goldwater was a life member of the American Radio Relay League, and president of the Quarter Century Wireless Association in 1971.

Update: The RSGB Supports Morse Abolition
==========
Recently, we reported that the Radio Society of Great Britain had announced that it no longer supports the mandatory requirement of Morse code for amateur privaledges on HF. This news, of course, came as a shock to many amateurs across the world.

We have since contacted the RSGB regarding this matter. We have asked them to explain the background of this decision and why they are pursuing this. At the writing of this bulletin, we had not received a response from the RSGB.

We feel that the decision to abolish Morse code could actually have detrimental affects on our hobby. Not only has Morse code been a standard for so many decades, it also acts as a "filter" for HF. Only those who truly wish to operate on HF do so, because they must study hard to pass their Morse code tests. If Morse code is eliminated as a requirement for HF operations, then there will really be no effort involved in obtaining one's amateur license, as even now our written exams are available in books, complete with the questions and the answers. One simply must memorize these answers, take the test, and obtain their license. This decision would only further dilute our licensing system.

We would appreciate your comments on this matter. We would like to see what our readers think of Morse code as a requirement for HF. Please direct your comments to w8mmq@hotmail.com or rscm@hotmail.com. We will respond to each of you as soon as possible.

W1AW To Operate Class A During Field Day
==========
The Maxim Memorial Station, W1AW, will operate Class A during this year's Field Day event.

W1AW's General Manager, Joe Carcia, NJ1Q, says that the station has operated Class D too long. The station will therefore operate Class 3A from a state park in Bloomfield, Connecticut.

Field Day 98 will run June 27 and 28. For complete information on the event, visit http://www.arrl.org/contests/announcements/98/fd/.

Amateur Radio Resource Site of the Week
==========
The Amateur Radio Resource Site of the Week is back! Each week, we will now review a site that contains excellent information and resources for amateur radio operators.

If you have come across a site that you would like to submit for our review, please direct it to w8mmq@hotmail.com. We will let you know if we decide to include it in our bulletin.

This week, we feature the Amateur Radio Beginners Information Page, which you can find at http://www.acs.ncsu.edu/HamRadio/FAQ/. This site is filled with information of great value to those who are interested in

amateur radio.

It includes an introduction to amateur radio, as well as more technical and advanced questions and answers regarding the hobby. This site is definately a must!

This Weekend in Contesting
==========
For complete information on upcoming contests, visit the ARRL Contest Calendar, at http://www.arrl.org/contests/.

The QRP TACTical Contest is scheduled for June 6. The contest is sponsored by the QRP Society of Central Pennsylvania and the EPA QRP Club. It runs from 1800- to 2400-Z June 6. Operate CW and QRP only.

FTC Expected to Sue Intel
==========
Of interest to some of you, we have news that the Federal Trade Commission is expected to sue Intel Corporation for "bullying" competitors and engaging in monopolistic practices. This just after the suit against Microsoft, in which 20+ states were involved.

The lawsuit against Intel could come within the next 10 days, as investigators are urging the Trade Commission to follow through with this. Some have already predicted that this could be the end of Intel, as it may break up, opening the door for its many competitors.

The "Wintel" combination (Windows and Intel) currently controls around 90% of the nation's computer systems. As of this writing, the FTC was refusing to comment on the investigation.

We hope that you have enjoyed this issue of The W8MMQ Wire, and found its contents useful. We would love to hear your comments regarding this issue, or any issue of our news bulletin that you have received.

For more information, visit the Radio Society of Central Michigan web site at http://w8mmq.ml.org/rscm/. And for news, as it is issued, visit The W8MMQ Wire on the web at http://w8mmq.ml.org/news.htm.

DAVE:
Back in the late 50's when the change from cycles per second to Hertz was proposed, there was a strong grass-roots movement here in the USA to rename the unit in honor of Charles Proteus Steinmetz. He was a genius who performed much early research into the theories of AC rotating magnetic fields, and is primarily responsible for the development and success of both AC power systems and AC motors. Not to belittle their accomplishments, Nicolai Tesla and Heinrich Hertz spent much of their time on the etherial subject of radio waves, which are much higher in frequency regardless of the unit name.

Some of us who actively campaigned the issue attribute the adoption of the label Hertz to the fact that the committee insisted on change for the sake of change, and to honor Frenchman Blaise Pascal instead of maintaining the dominance of units of measure named for German heritage researchers. They just couldn't accept that the unit of frequency would still be abbreviated CPS!

4057. YEASU FT-51R - successor at HAM RADIO BODENSEE?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-05 00:00:00 UTC
From: Heinz Kreft <PDM-C@MSN.COM>

Does anybody know if there will be a successor of the handheld tranceiver FT-51 in the next time (for exmpl. at HAM RADIO BODENSEE)?.

Last year, YEASU came out with the VX-1R Lithium Ion accu. But this is not a replacement for the FT-51. Due to the relative long time of about three years, one can expect even an update in the accu technologie (NiMn -> LiIon).

Heinz

Let us now compare the two organizations, ARRL and NCI, both of which we all believe to have flaws, each in our own way. ARRL, while having a modest staff, does not profit from ham radio- the Red Cross, the UN, etc. all have salaried . It would be foolish to assue otherwise. Volunteerism of this magnitude does not exist (and one may question volunteerism generally). NCI has, notably on its Board, Fred Maia W5YI, whose competing series of instructional materials and other amateur radio knick-knacks is well known to all. He stands to personally profit through a new series of codeless books and increased sales (at least briefly as even ARRL would point out in the wake of the code. This does not begin to investigate the financial interests of the other members of Maia's circle. The records of the ARRL are widely published, and open to all. The Maia NCI group is a small cabal of men seeking to derail the Amateur Service of how the FCC should act.

I am, gentlemen, your most humble and sincere servant,

Raul Bloodworth

Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

** Replace "gateheap" with "g8eap" to respond by E-Mail**

BURY RADIO SOCIETY - DIARY DATES 1998

The Bury Radio Society is pleased to announce its Programme of Meetings for the remainder of 1998 as follows:-

9th June - "The CIA and RFE/Radio Liberty" Gordon Adams G3LEQ

14th July - Pedestrian Excursion with Radios

11th August - Vehicle Outing with Radios

8th September - "Inter Club Quiz" (Details to be announced)

13th October - "Construction Competition" (Multi Section)

10th November - "Surplus Equipment Sale" (Biggest Ever!)

8th December - "Annual General Meeting"

The Meeting in June will commence at 8.00 pm but why not come along a little bit earlier and enjoy the Informal Gathering of Members from about 7.45 pm.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, near the Town Centre of Bury, where it has its own Rooms for Lectures and other Society Activities such as 'On Air' Nights etc. On Evenings when there is no Lecture there is an Informal Gathering from about 7.45 pm onwards so why not come along and meet the Members. Visitors and Prospective Members of all Ages will be most welcome.

The Mosses Centre is located near the Town Centre, adjacent to Angouleme Way and just a few minutes from Junction 2 of the M66 Motorway. There is a large Public Car Park next to the Centre and there is reasonable Access for the Disabled. The Entrance is on Edward Street, just off Cecil Street.

The Licenced Bar at the Centre is set in a comfortable Lounge Area and is open from 7.30 pm to 10.30 pm and has a wide range of Alcoholic and Soft Drinks at reasonable Prices.

73 de Keith G8EAP and G0WQD

Bury Radio Society, C/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB. Telephone 0161 761 2079 (Office Hours).

4068. Ham Logging Software ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-05 00:00:00 UTC
From: This Computer <garyd@voicenet.com>
Message-ID: <2SGd1.106$m4.2375317@news3.voicenet.com>
Source record: 170698

Anyone know where I can locate some good all around logging software either freeware or shareware preferred. I dont want to go the commercial route unless I can be sure it is good as I am tired of getting ripped off with buggy untried programs. I want to keep track of contest and DXCC, WAS, etc...

Thanks for anyone who can assist.

email to garyd@voicenet.com

Don't know who this Obrian guy is but you must really like him. No one has sent your mother e-mail from this account,If anyone is harassing her it would be her 50 year old son who keeps coming home for a place to live. First the Coast Guard,now the University.And the Yellow devil dropped you too.So sad to see the all-knowing hit rock bottom.Let the group know when Mom kicks you out,you can go live with Dan. You are both in deep denial.

PS Mc Donald's is hiring!

This post is not appropiate for this group. The groups rec.radio.swap
and rec.ham-radio.swap were specifically created for posts of this type.
Being the overtly anal administrator of rec.radio.swap you should know
this. In keeping with your tradition,a copy of this errant post will be
forwarded to Paul Scheck and the UCSD Listserv administrator. Please
keep your posts on-topic and try to move out of your 71 year old
Mother's basement. Thank You

> really exactly the same?

For years things were named for the people that developed them...
The unit of resistance was named for Mr. Ohm ...The unit of voltage
was named for Mr. Voltaire...The unit of current was named for Mr.
Ampere, but for some reason, the principle of AC voltage going
through a cycle of 360 degrees, was called cycles for many years..
Along about the 60's or 70's, some standards group decided that the
cycle name should be changed to honor the person that developed that
principle, Mr. Hertz (not the rental car guy)...Yes, they are the
same, but many old timers, like myself, get set in our ways and like
to call things the way we learned them many years ago...And there is
still a lot of old equipment out there that is marked in cycles,
but all new stuff is marked as Hz...

Actually, Will, nearly all Oriental societies are monoracial. Notice also that they also score much higher in scholastic aptitude tests, work ethic, and productivity. In addition, they experience much lower incidences of crime and violence than does American society. Coincidence? I think not.

Read the newsgroup:

alt.usenet.offline-reader.forte-agent

You can find out all you need to know about Agent and Free Agent
there. In the meantime, you might try increasing the period that you
leave messages unpurged. Don't kill an Ignored message; you need at
least one of them in your active database in order for the software to
continue to ignore the thread when you download new mail.

From the Help File:

"Be sure to keep at least one header in a watched or ignored thread in
order for this feature to work. This ensures that the feature will
work, no matter how you have set the purge properties. These settings
are on the Purge tab of the Group Properties dialog boxes. To find
the Purge tab, select either Properties (for selected groups) or
Default Properties from the Group menu and click the Purge tab."

Consider upgrading to ($29) Agent, which lets you killfile individuals
and subjects that waste your time.

I don't know where the FAQ is, but the American Radio Relay League has a
web page at www.arrl.org that has info on getting an amateur radio license.

Also get the book "Now You're Talking" published by them and available from
Radio Shack and others (make sure it's the current edition). This has
everything you need to pass the Technician exam and get on the air.

I work in the ambulance service, and am designing a power control center for my car that will distribute power (using automotive-style relays) to my overhead lights, rear deck lights, high and low power radios, and EMS alert receivers, as well as an inverter and some auxillary power sockets in the trunk and back seat. I have two questions:

1) The relays I'm purchasing are rated 20amp at 28VDC. I'd assume that Ohm's law would allow me to run approx. 40amps through them at 12VDC. Am I correct, or am I asking for some melted relays?!?

2) I need, at peak periods of operation, to pull as much as 40 to 50 amps from my auto battery to my trunk, where the control modules and relays will be located. I was thinking about using one (or several) runs of 15A@125VAC lamp cord, or standard ROMEX cable. How much current does your typical ROMEX cable or your average lamp cord handle at 12VDC, as opposed to the 125VAC that they're designed for?

OK So I lied...I have one more question:

Is it better to fuse the runs at the battery, at the module (relays) or both?

Thanks!

For cable, the voltage rating and the current rating are not related. The current carrying capacity is determined by the cross section area of the wire and the voltage rating is determined by the insulation (how much voltage before it breaks down and arcs over). The same for relay contacts. Ohms law does not apply here. If the relay contacts are rated at 20 amps, 24 volts then 20 amps is the maximum, regardless of your circuit voltage. You also need to leave a little margin so I wouldn't plan on running more than about 18 amps through a relay rated for 20 amps.

According to the wire table in ARRL Handbook, #10 copper wire will safely handle 14.8 amps, so you will need four parallel runs to handle up to 59.2 amps. You also need to divide the loads so that no one relay handles more than about 18 amps. Always fuse the cable at the power source, otherwise a shorted wire could cause a fire. I recommend an 15 amp fuse on each individual wire.

You are drawing enough current here that you also need to consider the capacity of your battery and charging circuit. If you're drawing 50 amps from the added equipment plus whatever the standard vehicle equipment needs will your alternator keep up? Often a heavy duty alternator and battery (or a second battery) are installed when you start talking about this kind of load.

For sale:

ICOM 765 with both 500 and both 250 cw filters, standard ssb filters. S/N 3568. Purchased new.

Excellent condition. Has always worked perfectly. Never been back to the factory. No need. Almost never on ssb, only cw. No digital use. No FM use. Non smoking environment. Friend replaced a pilot bulb a few months back. That's it.

$1450 plus UPS Ground from Phoenix, Arizona. Have
daily UPS pickup and can calculate the shipping easily with your zip code.

Thanks.

Please reply directly to bmyers@primenet.com

Ignoring the idiots is easy. It is all the folks who respond to them that
are the problem. If no one responded to or commented on them, they would
go away, but all their responders and detractors keep their nonsense alive
and in our faces. ::sigh::

Hi all

Can someone tell me if there is a way to really ignore the idiots in Free Agent Newsreader. I have learned to use the ignore thread button, but the messages themselfs stay in the header window. If I delete them, they just come back again. I realize this is a bit off topic, but I would really like to be able to enjoy the company of the good folks out there without all the sub-moronic chatter.

The killfile (filtering) capabilities and crossposting management alone make the $29 Agent worth the money. It will install right into the same directory you've got FreeAgent in and you can use it with your existing newsgroup files.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

Ok, I am not talking of getting smaller, size of the FT-51 is OK. About what I am maybe dreaming is something like a hybrid of a Nokia 6110 GSM handy and the FT-51 (not talking of the digital codecs and wireless protocoll). Handys are in the mass-market place and accu technologie of Li-Ion is widly spread over the handy and notebook market. This technologie is already avail. at a very cheap price because of mass production AND have all these ++ about energie/Kg and no memory effect AND there is a SMART-Memory interface, so that the system can talk to the accu ...

But accu technologie is only one direction, in which YEASU can move, the other points are that in the last three years the analog components are went through several evolution processes and I am simply saying, that if we want to make the best out of this process, YEASU have to pull out the next generation of the wounderfull FT-51 handhelt.

Source record: 170480

If you're concerned about the rapid decay of our once moral and powerful nation, join us tonight for The Great Liberty Net. W1WCR tells it like it is with regards to the "dumbing down" of our country. Your comments are encouraged and appreciated. We meet on 3950Khz, Saturday nights, at 10:00PM EDT. Non-hams are also encouraged to listen and learn. Any shortwave receiver capable of tuning in the 75 meter band should prove sufficient. A large antenna is not necessary since most of the signals are quite powerful (HI, HI)

More information can be found at our homepage:

http://www.angelfire.com/ky/libertynet

Thank you for your support and God bless...

Well
I hate to say this but with the soon death of CW, the "noble" hobbie
will be no more then a big channel 19 (27.185 MHz.). It has already
started to die(look at the crap on 75 & 20). When I was younger ham
radio was a technical marvel, and the people in it were respected in
there communities. This why I wanted to be a ham radio operator. I got
my first ticket back in the 70's. When I took my test you had to go
before the FCC and take the test there was none of this VE crap! Also
there was know question pool at the end of the CW exam. You had to get a
number of letters in a row to pass the test. Something my grandfather
used to tell me before I was a ham anything worth having is worth
working for. That used to piss me off. I wanted to be a ham and didn't
want to learn CW. Now I understand why it was so important for the hard
testing. I do belive that they have made getting a amateur radio ticket

way to easy. So the people that are there know longer respect the privilege that they have. I also got to say this we no longer have a police force to clean the mess up. The government is partly to blame for this, the FCC has no money for enforcement of the rules. It seems that they do not have the money for court. That is why we have QRMers up and down the radio spectrum. They know that nothing will happen to them, and if they were to lose there license all they would have to do is test back in after a couple of years, K4OKA Al is a exemple of this. So I hate to see the death of CW too. I do belive that it will mean the death of amateur radio service as we know it. I do belive that its a crime!

Can I drop a old IBM 8088 or a apple IIe computer on the no-code geeks?
How about a vic 20 or a trash 80? I really hate to see CW die! If it
does we will be saying things like breaker breaker and 10-4. I will also
bet we wil hear stuff like echo boxes and roger beeps. In stead of
calling CQ we will be saying how 'bout it skipland, CQland or the
imfamous DXland. Signal reports will consist of your giving me seven
pounds, MARK MY WORDS! I truly hope to see CW live.

Well, the real problem is the long lever arm produced by that stack of
adapters. This should be a lesson not to do that. Put a SMA on the coax
next time.

Oris, I'll say this once and only once: I have nothing to do with whatever problems you may be having with others on this newsgroup (and that's quite a bit, judging from the number of postings that mention you.) I have never spoken to you, exchanged e-mail with you, posted anything about you, put up a website that mentions you, nor had an on-air QSO with you. I have no problem with you and am not in any way involved with those whom you are having problems with, either on-air or on this newsgroup. Where we go from here is up to you? Do you wish to keep things as they are between me and you or do you wish to engage yet another would-be adversary?

We will see more of this. Don't be surprised if
one of the Japanese "big-3" bows out of the
American market sometime in the next year or
two. USA sales of new HF rigs have been
low for quite some time! These companies
have to realize that the movers-and-shakers
of the 90s are NOT to be found in Ham Radio.
I really do hate to say it, but Amateur Radio has
been dead since the Internet really took off in
the early 90s. Some of us are still in denial --
especially those of us who remember the Amateur
Radio of the 60s and 70s. Amateur Radio
had its day, but thatday is now in the past.
Things change. Extinction happens!

Hello! My name is Dr. Yancey Kolowski, and by way of this posting I would like to introduce myself and the study I will be doing in this N.G. for the next few weeks.

I have a Ph.D in clinical psychology and am conducting some research for a class I will be teaching next semester. It was suggested this N.G. would be an excellent place to conduct my research via observation. I will probably not post, except to clarify such terminology as, "you homosexual trailer trash" or "Orifice has mentally-challenged street-walking children." I find such terminology well suited for my research.

Additionally, I will be observing why a "Stumpjumper" becomes so upset when he or she is told to learn how to spell. BTW, I'm not exactly sure just what a "Stumpjumper" is, but I will be learning from you.

Oh, BTW, feel free to flame me or direct your hate speech at me, if you feel the urge. It is all part and parcel of my study.

Thank You,

Dr. Yancey Kolowski
RSU

P.S. I've been told Stumpjumper Jimmy is very popular in this N.G. I hope to study him closely in order to discover the root of his popularity with his N.G. peers.

Do you know of a good source of a SMA connector ? I might be interested.
I would also be interested in a small length of coax (2-4 feet) with a
SMA connector at one end and a PL-259 at the other.

4149. Heathkit VFO For Sale $95 or B.O.

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-06 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6lcg1kdaf1@nnrp1.dejanews.com>
Source record: 170511

Heathkit VFO HG-10 with manual in good cond. for it's approximately 40 years of use. The band switch will require lubrication as it is stiff from lack of use. The other two controls are fine. The octal plug you will will need to supply.

May be viewed at:

http://www.geocities.com/Athens/Forum/3417/VFO.JPG

There's some minor scratches on the top of the unit. If you look closely, you can see the paint is worn at the upper right and left corners of the cabinet. This is where the sheet metal was formed at the bends to make the cabinet. A nice feature of this model is that there's an inserted letter with manual from Heath indicating that there was a capacitor change during if manufacturing run to minimize chance of drift. The letter is reproduced with the photo above.

$95 or best offer plus shipping costs.

For a full description with pictures and specifications for the HG-10 see at the following web URL: cyberventure.com/heathkit/ham/hg-10.html

4150. Hammlunds For Sale

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-06 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6lcg9g$dm0$1@nnrp1.dejanews.com>
Source record: 170512

TWO NICE HAMMARLUNDS FOR SALE:

HQ-140-X (no speaker)

HQ-170 with matching Hammarlund Speaker (original owner).

Both units are in extremely nice shape for units this old. Of course there's some minor scratches and the like, but these would be considered extremely well kept for units that old. Plus both units were owned by people who were not smokers, thus the meters and dials are pure white and not yellowed as one usually would expect with old boatanchors.

Photos:

HQ-140-x:

http://www.geocities.com/Athens/Forum/3417/HQ-140-1.JPG

Purchased off the gentleman directly who owned it.
He is retiring and wishes to reduce his collection. He stated that the unit was recently gone over and is in super operating condition. $195 or b/o plus shipping costs. Will consider a good condition & complete Hickok USN or USAF AN/118B cardmatic or TV2-C for a swap for the 140-X.

HQ-170 & Matching Hammarlund Speaker:

Have taken all sides so you can see the condition.

http://www.geocities.com/Athens/Forum/3417/HQ-170-1.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-2.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-3.JPG

Purchased off the son of the gentleman who bought it brand new. The unit was represented to me by this gentleman's son as being in good cond., because that's the way his father was. The son said it was operating fine before he removed it from his father's home. Said he and his brother were listening to the Dodger's game. I am not an expert at this type of radios, but know well what they are. The only things I can see is that one of the light bulbs that illuminated one of the dials needs to be replaced and the fine vernier adjustment will need a dial string (a.k.a. some folks use dental floss). Since neither this gentleman's son, nor I are experts at the use of these radios that is all I can say and you can see the condition yourself. From the photos you can see there's some scratches etc., but the unit would be considered in excellent physical cond. for its age.

HQ-170 & Matching speaker $325 or b/o plus shipping.

Thanks.

4151. Johnson Viking Challenger F.S. $95 or B.O.

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-06 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6lcgkt$dt8$1@nnrp1.dejanews.com>
Source record: 170513

E.F. Johnson Viking Challenger Transmitter and Morse code key
with Johnson manual. Price reduction--$95 or best reasonable
offer plus shipping.

Some nice folks advised me that this unit does not have the
original Johnson stock meter setup, but was upgraded by the owner
at one time from examining the meters in the photo.

Photo at:

http://www.geocities.com/Athens/Forum/3417/VIKING.JPG

The unit's power cords, etc. need replacing due to the old rubber
insulation cracking. Could not be plugged in for this reason.

Purchased off the son of the gentleman who bought it brand new.
This unit was represented to me by this gentleman's son as
probably being in good cond, but he did not remember his father
using it for quite a while. His point was that it probably ran
the last time his father used it many years ago.

Will consider $95 or best reasonable offer plus shipping.

Thanks.

4152. Collector's Quality Grid Dip Meter $160

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-06 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6lcgvu$ed4$1@nnrp1.dejanews.com>
Source record: 170514

Collector Premium Quality Grid-Dip Meter made by James Millen Mfg. Co. Inc., Malden, MA., U.S.A. Model Number 90651.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GRID-DIP.JPG

This unit is like new and is in amazing condition! See Photo. It even has the original box, packing and manual with it. One lucky person apparently sold a unit for $325 in this super condition and I have seen them for $65 as well in decent condition.

Candidly, this meter is priced for either a collector or someone who wishes to pay a premium to have one in new extraodrinary cond. in the original box and not the operator who just could use a meter. Again, similar models in lesser condition can be had for well under $100 if simple utilitly alone is the objective.

Will take $160. Due to the amazing condition of this unit cannot consider offers less than $160. This is a rare find. Will also consider some type of swap for a Hickok Navy or Air Force military 118 cardmatic tube tester or TV-2C.

Thank you.

>I love to run QRP when approprate, think about a 1000 watt signal being S-9 at
>a particular recieve site, 65 watts would be an S-7 at the same site!

Yeah, sure, but that doesn't help much if the noise level is S-8.
And if you're S-1 at a particular location with 1 kW, what sort of
signal do you have when you drop to 65 watts? An S unit or two
does sometimes matter.

More power isn't often needed, but when it is, it is. It's nice
to have the option. That's comforting if I really need to get
a message through under marginal band conditions.

For most of my operating, even 100 watts is overkill. Quite
often the output meter barely flickers while I'm operating
digital modes, yet the link is solid. I enjoy the idea that I can
operate quite easily with so little power. But when I need to
check into a traffic net on 75m, sometimes low power just
doesn't cut it.

The FCC says we should run the minimum power necessary,
and I agree with that. But sometimes the necessary power is
quite a lot. I think it is importatnt to realize that use of high
power doesn't necessarily mark you as spawn of the devil
(not that I'm suggesting that you think so). Sometimes 1.5 kW
just *is* the minimum necessary power. And equally, sometimes
5 watts is more power than necessary. Having the capability to
span the whole power range is useful. What does mark you as
spawn of the devil is to routinely operate "all knobs to the right"
even when you don't need to do so.

A shunt loaded antenna will not show any resistance either. To verify that your coax is indeed the culprit, you'd need to remove it from the antenna base entirely and test it separated from the rest of the equipment.

I've been reading this thread (and a couple of others relating to the same subject) since the beginning. I never thought I would have anything to tell you guys but as luck would have it, it finally happened today.

I was tuning a J-Pole I built recently. I had collected the coax to a SO-239 to BNC connector and then the BNC to SMA connector. I know (believe me), it makes a long bunch of connector on the of the HT...

Well... I tripped on the darn coax and the HT fell from about 15 inches to the concrete floor of my garage. The SMA connector on the HT snapped right off. When I got that radio, I had a funny feeling that this connector would be the weak link in the chain. I am now sure it is. But I wouldn't trade that radio for any other radio on the market. I am just completly in love with it. If I could only have it repaired right now... The technitian told me it will robably take a couple of weeks before he gets the connector from the Yaesu so I guess I'll be QRT for a while...

Anyone has had a similar event and if so how much did it set you back ?

Stay safe !

An Elmer is someone who helps teach someone some aspect of amateur radio.
Could be electronic, antennas, rigs,theory,code, anything.

MARS stands for Military affiliate radio service. It's purpose is to pass communications between the military folks and their families. There is an ARMY Mars, a Navy/Marine Mars and an Air Force Mars. Frequencies used are not "normal" amateur radio frequencies but nearby ones.

Meteor scatter is HARDLY "advancing the radio art" ... it's been
around for decades ... besides, high speed OOK Morse is CERTAINLY
not the optimum method of using meteor trails as reflectors of
VHF signals.

Why??? Why do you assume that that would happen??? There is NO logical
reason to expect that newcomers, fresh young blood from the internet,
for example would not prefer digital communications to voice (not that
they might not use voice, too ... but so what?)

> Ultimately, liberty could become license with CW being
> eradicated.

Nobody is "eradicating CW" ... except, perhaps, in your deluded
fantasies ...

> Certainly not reasonable in a hobby setting, where all
> current radios for HF include CW.

At one point all radios were capable of spark ... what's your point???
If you're trying to make the case that "Because all current radios for
HF have CW capablility, all MUST be tested for it", that's ridiculous.

All cars come with jacks and spare tires ... they didn't make you change
a tire to get your driver's license, did they???

Gee ... I guess you write all of your personal letters
and business correspondence on postcards, right?

What the hell is wrong wiht wanting some possibility
of privacy in one's private communications?

I often communcate with associates and clients about
business matters via e-mail ... do you really think
I'd like some twit like you intercepting those messages?

And I use a pgp signature because twits like you have a
propensity for editing my posts to make them look like
I said things I didn't say ...

Your fake domain name really fits you.

Gentlemen, more proof positive that this individual, whose cabal has submitted commentary to the hallowed halls of our FCC, is a bit foul tempered. Gentlemen, this is why the framers of the Constitution established the institutions of government as they did. By preventing the "popular passions" of the people from swaying government leaders. The framers realized the hoi polloi are fickle, here one day, there the next. NCI will bear this out once again.

I say to you President Stevenson, your coterie of outlandish jack tars and saucy boys will not change the policy of this land until the people- the people defined here as the half of the 670,000 amateurs who know Morse code, until the people speak as one, and not from popular passions of a clique.

I am sir, once again, your most humble servant,

Raul Bloodworth, esq.

And what WOULD that indicate, when someone is presented with what the presenter believes to be fact, constantly defend himself with "You can't prove it?", when the presentee does not bother to rationally point out why the presenter is wrong? The simple way to credibly deny that your name is Drew Durigan, MNManiac, CBrambo, etc etc is to show us that you are somebody else. That you do not, and only say "You can't prove it!", is sufficient proof for me. C'mon, Drew... be a man and fess up already.

Yep... I think you lose again. Drew.

Never mentioned your "right" to post anonymously. I only point out the fact
that you post drivel and slop that you would not dare post with your real name
and call, on a group where it is customary to sign that way. I point out that
you are but a frightened little boy who hurls insults at people, flames left
and right, runs off at the mouth in general, and is afraid to take
responsibility for his words.

>>Also, I don't even know Casey, except by his posts, and I don't think that

Again, I do not know him, though you still ignore that inconvenient little fact. Yes, that is something not commonly done, without the author's permission. BUT... you, me, Al, and everybody else knows who to call to task for it, since he is man enough to use his name. When you, on the other hand, make questionable remarks, it is behind your well-eroded screen of anonymity.

That's it? well, I guess you lose again. Drewser.

I will let you have the last word for now, though, Drew. I'm gonna be a bit busy the next couple of days so don't think I am being rude by not speking to you. I'll be back shortly. 73 OM

Whoa, there, Drew. You got me that time... I will have to go back and read those posts some more. I hadn't noticed that was a DejaNews Libnet. Mea Culpa, OM. You have my temporary, conditional, until I form an opinion or see some indication, apology. I couldn't figure out who the hell you were talking about except poor old Yogi Berra, and was quite startled that you didn't know who he was. No, as far as my certainties about your multiple alter-egos go, you are just plain old Drew/MNManiac/CBRambo/TheLibNet@aol.com. Lack of communication there, OM, and if you think I thought you sere someone else from something I said, consider this a clarification of my previous statement. No hard feelings?

I guess you won that time. Drew.

But I won all the others.

One of the operative phrases in that statement was "I think". In other words, not stated as incontrovertible fact, but as opinion. I did not intend to step on your toes, Kevin. I was calling Drew to task for speaking for you. Here is, perhaps, a more meaningful and contextual snip from the post you refer to.

>I think Kevin would be horrified if he noticed just who was presuming to
>speak for him. I vehemently disagree with his philosophy, but I sense he does
have
>a little bit of pride

If you LIKE Drew speaking for you, my apologies. If you feel that I was presuming to speak FOR you, let me reassure you that it was not meant to be taken that way.

4180. Need help with noise on my amateur radio in Caravan

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-06 00:00:00 UTC
From: bodoh@splitrocktel.net
Message-ID: <897109355.675157@nntpcache1.nortel.net>
Source record: 170551
Cross-posted to: rec.autos.makers.chrysler,rec.radio.amateur.misc,rec.radio.amateur.equipment

Hello,

I have just installed my Kenwoord Tm742 dual band amateur transceiver in my 1997 Dodge Caravan. I now pick up sporadic noise on 146.895, very unhandily the frequency for the primary local repeater. The noise does not always occur and never does with the vehicle off and in accessory mode. I used my scanner to track it down a bit and seems to originate from around the radio. Figuring it was the clock oscillator (as with past caravans) I pulled the fuse but it continued. I tried several things - radio off, etc but to no avail. The I was sitting there trying to find it and it just stopped. It of course came back later but I could find no apparent reason for it to come and go. My old Caravan had a similar problem on 146.520 and that was confirmed to be the clock oscillator. Any thoughts? Thanks in advance...

Hi Hi Now, by a show of hands, how many of us are not guilty of any
of those "how to be a lid" steps at some point in our ham experience?

Be careful here. They could easilly retaliate. An HTX-202 with battery pack makes a pretty good "brick" for throwing purposes :-)

Again, Robbie feels compelled to answer a question which was not directed to him. In answer to the question: No. I was simply asking why we should take Casey seriously in view of his past history of making similar statements, only to have him engaging in argument again within hours. A quick scan of his past month's activities on here will confirm this.

Hello,

I have just "completed" a new page on Atlantic City Broadcast Radio at:

http://www.exit109.com/~jimh/atcitynj.shtml

It's another addition to my "Jim's Radio Room" Site at:

http://www.exit109.com/~jimh/radio.shtml

The new page covers some ground that my other pages have not, such as
FM, small AM
transmitters (New and "Boatanchor") and more studio stuff.

I thank Tom McNally, the Chief Engineer for giving me the tour with
enthusiasm, answering
my additional questions and proofing the page.

Enjoy!
Jim Hawkins - WA2WHV
PS: Don't mis my other relatively new page on the NSS VLF transmitter
site in Annapolis, MD at:
http://www.exit109.com/~jimh/nss.shtml

>
>I correct, or am I asking for some melted relays?!?

Assuming that the 20 amp figure is the rating of the contacts, Ohm's Law
does not apply in the way you assumed. The contact rating at 12 V is
likely to be the same as at 24 V, but if that is a problem, check with
the manufacturer.
>
>2) I need, at peak periods of operation, to pull as much as 40 to 50

>of 15A@125VAC lamp cord, or standard ROMEX cable. How much current does
>your typical ROMEX cable or your average lamp cord handle at 12VDC, as
>opposed to the 125VAC that they're designed for?

No, you must use cable designed for automotive use - headlamp cable in
your case. While electric power cables could be made to work, they are
not designed to be used under automotive conditions and there are
several problems that might occur.

Cable current ratings are independent of operating voltage.
>
>OK So I lied...I have one more question:
>
>Is it better to fuse the runs at the battery, at the module (relays) or
>both?

You must fuse at the battery end, so that the fuses protect the wiring
from burn-up if you get a short-circuit somewhere along the run.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <663>

.....
>From the Editor's Desk:

You ever have one of those days when it seemed that, when you arrived at work, you realized that you left your brain at home? I got a little ahead of myself last week and mailed out EMCOMM Bulletin 135 (which was a good thing), except that I should have mailed out EMCOMM Bulletin 134.... oops. At any rate you should have reveived EMC 134 in a separate mailing. if you didn't, it's available on the ACS Home Page.

If you havent had a chance to sign up for the Basic Incident Command System course presented by FEMA's Emergency Management Institute, you're really missing a great opportunity! This course is self-paced, take about 12 hours to complete, and you can't beat the cost....it's free! Once you've taken a 50 question final examination, FEMA will mail you back a completion certificate that will look great on your wall and let others know that you're up to speed with the latest of FEMA's educational programs. For more information and a course list, stop by the EMI Home Page at FEMA: http://www.fema.gov/EMI/ishome.htm

Stay safe, everybody! See you next week -- Dave Larton, Newsletter Editor
.....

>From the mailbag:

From: "Robert W. Sanford" <rsanford@pipeline.com>

Hey Dave,
Dont know if this is suitable for the ECOM bulletin but thought I would pass it along anyway.

*** From ARRL Bulletin 39 (ARLB039) May 29: Former US Senator, onetime presidential candidate, and noted radio amateur Barry Goldwater, K7UGA, died May 29. He was 89. Goldwater had suffered a stroke in 1996 and had been in failing health.
A staunch conservative, Goldwater was the 1964 Republican presidential nominee and served five terms in the US Senate. He also authored the book Conscience of a Conservative. Goldwater retired from politics in 1986. His home was in Scottsdale, Arizona.
As a Senator, Goldwater's legacy included several pieces of Amateur Radio-related legislation. In 1964, Goldwater's bill to allow reciprocal operating agreements between the US and other countries was signed into law. It was his work on the bill that prompted the Arizona Senator to renew his interest in ham radio after a long absence.
Goldwater's 1964 presidential campaign tried to tap into his ham radio connections with a "Hams for Barry" fundraising effort. He took time out of the campaign to address the ARRL National Convention in New York City, on the occasion of the League's 50th anniversary. In his remarks, Goldwater reminisced about his youthful foray into Amateur Radio as 6BPI. He was first licensed in 1921, and joined the ARRL in 1923. "You can't imagine what a relaxation ham radio is for me," the campaign-weary Goldwater told the gathering. He related how, during the GOP Convention earlier that summer, he'd made several hundred contacts from his hotel room using a borrowed Collins S-line. The convention presented Goldwater with a certificate of appreciation for his work on behalf of the hobby (see QST, Oct 1964, p 80). Goldwater lost the 1964 election to Lyndon Johnson.
While serving as chairman of the Senate Communications Subcommittee in 1981, Goldwater introduced landmark legislation proposing several changes to the Communications Act affecting amateurs. In 1982, Congress finally approved and President Reagan signed what came to be known as the Goldwater Amateur Radio legislation, enacted as Public Law 97-259. The measure established the Amateur Auxiliary and the volunteer examination programs, permitted 10-year license terms, and exempted Amateur Radio from the secrecy provisions in the Communications Act. The Goldwater bill also ended years of Congressional wrangling and authorized the FCC to set RFI susceptibility standards for home electronic devices.
A year later, President Reagan signed into law a bill including a Goldwater amendment that allowed the recovery of costs in the Volunteer Examiner program (the FCC didn't authorize the plan until months later, however).
At one point in his ham radio career, Goldwater operated as K3UIG from his Senate office and as K7UGA when he was home in Arizona. He called his Arizona ham shack "bash-hal-ne-ae," which he said was Navajo for "music from iron" or "metal that talks."
Goldwater was a life member of the ARRL. He was elected president of the Quarter Century Wireless Association in 1971. A

pilot during World War II, he held the rank of General in the Air Force Reserve and was an active member of Air Force MARS. During the Vietnam War era, Goldwater handled hundreds of thousands of phone patches. He also held a pilot's license and occasionally operated aeronautical mobile.
In 1983, Amateur Radio paid homage to Goldwater as "its governmental protector and advocate" by establishing the $5000 ARRL Scholarship to Honor Barry Goldwater, K7UGA. In announcing the scholarship, then-ARRL Washington Area Coordinator Perry Williams, W1UED, said that Goldwater's Amateur Radio involvement had "brought joy to thousands of members of the armed services stationed overseas, and through his professional career, he has exemplified the principles of commitment and service to one's country and fellow citizens."
Then-FCC Chairman Mark Fowler said the Amateur Radio community was lucky to have Goldwater as its "elder statesman" in government and noted that the FCC often had Goldwater review ham-related proposals before it took action on them.
The Goldwater scholarship, administered by the ARRL Foundation, is awarded each year to a deserving radio amateur to encourage a spirit of achievement and dedication in the field of communication.
ARRL Executive Director David Sumner, K1ZZ, said that of amateurs in the public sector, Goldwater was "without peer." Southwestern Division Director Fried Heyn called Goldwater "a super ham" who was "concerned about the future of Amateur Radio."
Goldwater's first wife, Peggy, died in 1986. The couple's two sons and two daughters and Goldwater's second wife, Susan, are among his survivors.

What's New on the Web:

FEMA TROPICAL STORM WATCH ONLINE FOR 1998 HURRICANE SEASON

WASHINGTON June 1, 1998 -- As the 1998 hurricane season begins, the Federal Emergency Management Agency (FEMA) launches its Tropical Storm Watch page today on the World Wide Web. This is the fourth year for FEMA's online service.

"The Internet has become an important communications medium for FEMA," FEMA Director James Lee Witt said. "Our website's usage has grown from 225,000 hits/week when Hurricane Opal hit Florida in late September 1995, to this year's average usage of more than one million hits/week - even when there are no major disasters."

The Tropical Storm Watch page offers hurricane preparedness information, fact sheets, maps and links to other key sites with weather satellite images and forecasts. The FEMA Web site is updated daily, ...sometimes hourly... with news releases, situation reports, tracking maps, and graphics. As a hurricane approaches landfall, users can see the projected path of destruction and learn how FEMA is coordinating the federal government's efforts to help state and local governments cope with the impending disaster.

"This year we will employ a new system to directly post key hurricane products from the National Oceanic and Atmospheric Administration's National Hurricane Center," Witt said. "This new service should help alleviate the user overload our NOAA colleagues experience whenever a hurricane approaches the mainland."

The FEMA homepage address is http://www.fema.gov. In addition to a set of key topic buttons, the homepage layout provides users with a quick view of the latest news. When the President declares a major disaster, the site's Disasters of 1998 page provides details on response and recovery operations with a state-by-state rundown.

With more than 10,000 pages of material, the FEMA web site is content-rich with information that goes beyond hurricanes to include all aspects of emergency management. "I hope all our Internet users visit the our Project Impact section. In it, they will find information designed to help break the disaster-rebuild-disaster cycle and provides ways they can work within their community to become disaster resistant," Witt said.

This week's EMCOMM Bulletin:

EMC135 Words, Words, Words!! 2/4 For release 6/8/98

(Topic continues from 134)
How, then, do we successfully communicate our ideas? When we write one of these bulletins how can we assure that you will grasp what we have in mind? Well, truth be told, we cannot do that, nor can you. We do the best we can with the media form and live with the consequences. No matter how careful our word and phrase selection, without face-to-face opportunities it's possible the message will be interpreted differently than intended, as the tone and body language are missing.

And even with in-person communications we still cannot be certain that our thoughts were clearly understood by the other person. At one point in my career I was an escrow officer with a title insurance firm dealing with real estate title transfers. It was a large office, 30 foot counter staffed by a group of us. That particular day a distraught customer came up to the counter and laced into me and the company about some problem. The more he shouted and complained the less I knew what was the problem. Then, I did something I'd never done before or afterward. I slammed my fist on the counter, and loudly said, "Stop it. Stop it!" whereupon 50 people in the office looked up in alarm, thinking I'd lost it. Then, I added, softly, "Now let's start all over. I don't know what you are talking about. Please start again". Well, it cleared the air, and we effectively communicated and went on to solve the problem. But, in order to do so it was necessary to clear his mental slate so he could clearly explain the problem.

Once the emotions can be calmed down an effective means of interpersonal communications can be: "Can you cover that again, can you explain that differently?" Or "I thought you said ..." Or "would you amplify on that?" It's fairly easy to do that in face to face conversations, and to some degree, on the telephone.

What about voice radio and telephone? In voice media it is somewhat easier to ask probing and interpretative questions. Even so, that can be difficult for those of us whose emotions are triggered to where we become angry because of a tone of voice or something -- sometimes we're not sure what it was that made us angry or whatever caused us to close our mind to the real content of the message and hear only what caused our reaction! After that we seldom hear or see anything that is said (or written) once our response crystallizes in our mind.

(Continues next week)

I just picked up 2 Johnson Fleetcom 504's with a factory AC power supply attached to the bottom of the radio. It's a vhf highband on 151.45.

Can anyone tell me anything about this radio? Can I transmitt on 159.225 and recieve on 151.370? Does it have a tone squelch option available (no external disable switch used)? Does anyone have a manual for sale? Morph@juno.com

Need to know about 2 radios that I picked up at Breezeshooters Hamfest today. They are GE Custom/Executive vhf highband, under dash units. Model #RC56FAS66

Does anyone have a manual for sale? Can I transmitt on 151.370 and recieve on 159.225? How many watts RF are they rated?

It is an obsolete Bell 202 modem chip used in some early TNCs. Jameco
still had a few last time I checked.

>If the Liberty Nits would stop coming on 3950 when it is in use and trying to
>take over the freq there might not be any jamming.

So, in other words, you are condoning illegal activity (jamming) as a means of making communications difficult for those whom you feel do not "belong" on the frequency?

Curtis, was that you playing the police siren last night? Tell the truth now.

SB DX @ WW $OPDX.360
Ohio/Penn DX Bulletin No. 360

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 360
BID: $OPDX.360
June 8, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA4FFW, KH6BZF, N6ED, WA6AXE, K7BV, K8RF, K8YSE, K9VX, 9A4SP, 9A4NA, BA4TB, CT1ELP, CT1EEB, DL1CW, DL4VBP, DL7UFR, G4BUE & DX News Sheet, OK1KAG/OH9MM, PY2YP, SV1IW, F-10255 <SWL>, VK2ICV, ZL1RS and ZS6PHD following DX information.

NODXA MEMBERS TO ACTIVATE AUSTRAL AND THE MARQUESAS ISLANDS ON RTTY. Northern Ohio DX Association members Bill/W8JGU and John/K8YSE will operate from Rurutu (OC-050, Austral Islands) and Nuku Hiva (OC-027, Marquesas Islands) with the main focus on RTTY. Their tentative schedule is to operate from Rurutu Island from June 8-12th and Nuku Hiva Island from June 14-18th. There may be some operating from Tahiti as well. John and Bill will sign FO0PAP and FO0MAC, respectively. These may count for BRAND NEW RTTY entities once voted and approved by the DXAC. Look for them on RTTY on 40, 30, 20, 17, 15, 12 and 10 meters on the usual frequencies. At times there will be 2 stations on the air with one on RTTY and the other on CW or SSB. They will try to give attention to Europe as openings permit. Operations on 80 and 160 meters is reported unlikely. All QSL requests go to K8OU. ADDED NOTE. Since John is the caretaker of the OPDX Web page the site will not be updated for the next two weeks.

3D2, ROTUMA (and Fiji Islands). Roberto, EA4DX, who you may remember from last September as 8Q7XX, will be active from Rotuma Island August 29th to September 19th (3 weeks), and from Fiji (Viti Levu) September 20-24th. He will sign from Rotuma as 3D2DX and from Fiji as 3D2DX/P. Activity will be on all bands 160-10 meters including the WARC bands on the usual DX frequencies. Operations will be on SSB and RTTY. Most of his activity from Fiji will be on the low bands and RTTY. His equipment includes a Yagi for 10/12/15/17/20 meters and a vertical for 40/80/160 meters, plus a 1 kw linear. QSL via EA4DX's callbook address or E-mail QSLs to: 3d2dx@earthling.net. There is a Web page for this operation, and it can be found at the URL address: http://www.qsl.net/ea4dx/index.html

8P, BARBADOS. Dennis, K7BV, and his wife Lieska will travel here and be active from 8P9Z's QTH July 7-14th. A 8P callsign will not be assigned until their arrival on the island. Dennis will operate CW extensively on all HF bands and RS12 prior to the IARU HF Contest July 11-12th (He is expected to enter the contest as a Single Op/All Band High Power CW category). As is always the case when Dennis operates from the Caribbean, he will make special effort to catch as many Asian band openings as possible. Whenever possible, he will respond to 9BDXCC QSY requests. QSL via K7BV CBA.

9K2HN/P OPERATION DELAYED. Hamad, 9K2HN, reports that he had to delay his operation to Kubar Island (AS-118) due to a conflict. His friends (not hams) who were going to join him on this trip to the island are taking final exams now!!

AP, PAKISTAN. The "DX News Sheet" reports that Amir, AP2AGJ, is a newly licensed ham in Karachi. He has been heard on 17 meters (18150 kHz) SSB. Look for him between 1500 and 1800z. QSL direct to: Amir Gulistan Janjua, Governor House, Peshawar, Pakistan.

BI4, PING ISLAND (New IOTA!). A group from Jiangsu Province of China are planning to be active as BI4Q from Ping Island either June 13-14th or June 20-21st. Ping Island is in the Huanghai Sea, 62 miles east of the cosat. This will be the first time anyone has activated this island, so no IOTA number has been issued. They will on 80-6 meters (including the WARC bands) on CW and SSB, using a 1KW AMP, A3S, R7000 and dipoles. The team consists of Jin/BA4TA, Deal/BA4TB, David/BD4RF, Ken/BD4RD, Chen/ BD4SE and possibly others.

CY9RF CQ WPX CONTEST OPERATION CANCELLED. Dan, K8RF, reports that the reason no one heard CY9RF from St. Paul during last weekend's contest is that the operation was unfortunately cancelled due to various factors, mainly last minute conflicts with one of operator's schedule. They did not have enough manpower to properly mount the operation, so Dan felt it was best to cancel rather than do a poor job. However, Dan may help out with Mike's (VE9AA) upcoming operation this summer.

GM, SCOTLAND. Look for F5VCR and G3OCA to be active from July 10-17th from various Scottish islands (NH07, NH13, NH26).

IOTA NEWS.....
EU-032. Patrick, DL4VBP, reports that he will activate EU-032 during his holiday from June 6-20th. He will operate from two French Atlantic coast islands: "Ile de Re" and "Ile d'Oleron" (both EU-032). Besides operating SSB, he will also be active on CW and RTTY.

EU-090. The Radio Club Split, 9A2A (9A1AKL) is planning to activate Palagruza Island during IOTA contest. The callsign will be 9A8P, same as the previous expedition. QSL via 9A1AKL, bureau or CBA.

KH6BZF PROPAGATION REPORTS. OPDX InterNet Subscribers will receive Part 1 of Lee's forecast for the month of June as an additional bulletin.

MU, GUERNSEY. Tom/DL4SZ and Arno/DL1CW will be active from here June 10-13th, signing MU/DL4SZ/p and MU/DL1CW/p, respectively. Arno will be active on CW only, but Tom will be active both SSB and CW.

QSL INFO AND NEWS......
Peter, ZS6PHD, reports that South Africa has rejoined the UPU and IRCs can now be used within South Africa. The current cost for IRCs is SAR 5-00, which is worth slightly under 1 USD. The airmail rate for postal items up to 10 gram is R 1-90 to anywhere in the world, so one IRC is more than enough for ZS-land.

Steve, K9VX, reports that the turn-around time for his EP2MKO QSLs from UA6HCW is about 4 months. He just received his card for a late January contact, via regular air mail.

The 3W6KA logs are now available on the WEB. Check the URL address at: http://njdxa.org/3w6log-check.html

Jose, CT1EEB, reports that the 1997 Kure Island DXpedition (K7K) Web page is up and running. The site contains inoformation and photos. Check out the URL address: http://www.qsl.net/ct1eeb/index.htm

QSLs for CT98ELP, as well as CQ7ELP (used in WPX SSB Contest), are via CT1ELP. The address is: Pedro Pedroso, P.O.Box 116, 2806 Almada Codex, PORTUGAL

DX Log Search for Andy, 9X0A, can now be found on the Web. Logs for his 9X/RW3AH, 9X0A, and 9U/9X0A operations can be found at: http://www.qsl.net/n6ed/9x0a.html

Kingman Reef, Johnston and Howland Island QSL cards. Mac, WA4FFW, reports that all QSL cards for the February-March operations from N4DAZ/KH3 Johnston Island and for N4BQW/KH5K, Kingman Reef have been mailed. If you sent a QSL for one of these station's contacts along with a card for the Howland, WA4FFW/NH1, in the same envelope, you will have to wait until the Howland cards go out. Gene/WJ4T, Joe/N4DAZ and Mac are beginning to process the Howland at the present time and expect to have them completed in the next few weeks. Harold, K4AU, reported to Mac that he is current with all QSL cards received to date for the Howland SSB operations K4AU/WH1. Mac also reports that all cards for the previous operations of Chuck, N4BQW, from Palmyra, Tern, Kure and Midway have been caught up and have been mailed. They appreciate everyone's patience as post DXpedition requirements have consummed more time than expected.

SV, GREECE (Now on 6 meters). Manos G. Darkadakis, SV1IW, R.A.A.G. General Secretary, informs OPDX that Greece is now using the 6 meters band on a secondary basis (primary use reserved for the Greek army), therefore the Greek ministry does not issue licences for visitors (either reciprocal or CEPT) for that band. Any operation from Greece, Crete or Rhodes from amateurs other than Greek citizens is illegal.

SV9, CRETE. Juha, OK1KAG/OH9MM, reports to OPDX that he will be celebrating his graduation in Crete, June 9-15th. He did not provided us with his Crete

callsign, so he may be signing /SV9. Juha did say his planned activity will be on 40-10 meters CW/SSB/RTTY. QSL via OH3LQK (prefer via bureau).

TF, ICELAND (Update to OPDX.358). Sigi, DL7DF, and his crew (Tom/DL7BO and his YL, Ben/DL7BY, Frank/DL7UFR and Wolfgang/DL2NWK) will be active from June 15th to June 21th. They have now reported that they will be active on 6 meters besides the other announced bands. They will use an IC-706 and a 5 element yagi for 6 meters. QSL via DL7DF.

WWSA CONTEST HAS BEEN CANCELLED/DISCONTINUED. Gilberto Affonso Penna, PY1AFA, the organizer of the WW South American CW Contest and former Chairman of the Antenna-Electronica magazine (contest sponsor), became a Silent Key (SK) as of September, 1997. With the passing of PY1AFA the magazine's new Board of Directors has decided to cancel the 1998 contest. The contest was to take place June 13-14th. Some Brazilian hams are trying to make arrangements to have the WWSA contest back next year, meanwhile the 1996 and 1997 results are avaiable on the WEB at: http://www.qsl.net/cwsp/wwsae.htm

VK9, LORD HOWE ISLAND. Nick, VK2ICV, is currently looking for 3-4 contest operators willing to operate from VK9LX during the CQWW CW Contest in November. The VK8LX team will spend 10 days on the island. Nick states, "All equipment will be on Lord Howe prior to contest - just bring your laptop and tooth brush." If interested, contact Nick via E-mail at: watchman@tig.com.au -- To look at last year's operation, check the Web site: http://www.watch4you.com/vk9lx

ZK1, SOUTH COOK ISLANDS. Ed, K8VIR, who was signing ZK1EHH from Rarotonga Island (IOTA OC-013), is now active from Aitutaki Island (IOTA OC-083) until June 10th. Check 21300 and 14267 kHz between 0130 and 0800z. QSL via K8VIR (GreenValley, AZ. address).

ZL8, KERMADEC ISLAND. Bob, ZL1RS, will be on Raoul Island in the Kermadec Island Group (which is 1000 KM N.E of ZL-lans), from June 28th - July 17th. His work on the island has priority, so ham radio activity will be sporadic. Look for ZL8RS on all bands from 160-6 meters, mainly on SSB with some CW on 160 meters and 30 meters. There may also be some RTTY activity if Bob can borrow a laptop. QSL via ZL1RS only 97/98 CBA: R Sutton, 109 Wright Rd, RD2, Katikati, NEW ZEALAND

the receiver. Most do not come with an external antenna connector. A quick
and simple solution would be to wrap a few turns of wire around the radio,
and then run the wire somewhere where someone wont trip on it. Believe it or
not, it will actually work. Of course it may also pick up a lot of
florescent liamp trash.

Notice how when covert62@bellsouth.net comes on all the mocking of the address TheLibNet@aol.com stops. Hey TheLibNet@aol.com the guy mocking you is covert62@bellsouth.net James pig Vomit Obrian III KD4CDB. He wants you all to send complaints to my provider. He is back to repeting his same old crap start trouble then when it comes back to him he crys foul. He is no more then a big wimp! He sent his wife out into the parking lot to do his talking for him he would not even come out into the parking lot at Maretta. He tryed to pull the same crap at Dayton but those boys up there found out what kind of mouth running sissey he truly is. If any complains should be sent they should be sent to bellsouth.net. James the pig Vomit Obrian III puts up webb sights that slander people and tell lies. Ask mindspring about Mr Obrians latest bungle. Bellsouth will give him access but no web site. Why is that. Every time he comes on this newsgroup he flames at everyone That has a decent ideal or opinion. He uses other peoples call signs, email addresses, and loggin names. This man has no morals. So complain to my provider if feel the need. I am not the problem here. I am the solution. I am for a better news group. If they are innocent people that got hurt because of my willingness to get Mr Obrian to blow his cover well I'm truly sorry. I felt the need to expose this irresponsable loser, yes loser. I don't hide behide any fake names nor do I use other peoples call signs. This guy does!
So if you have to complain to a service provider complain to bellsouth.net. I would be willing to bet the name of the account isn't even jimmy's I'll bet its in his sleezy wifes name or one of her sons name, who by the way who is older then Jimmy. So there you have the whole truth.
73 :-)

I'm looking for the spectra-display unit from GTI Electronics. If you have one in good condition, please let me know how much you want for it.

I would also be interested in any similar unit, which I can use with an oscilloscope, to provide spectrum waveforms of received signals.

Please e-mail responses directly to me. Thank you!

Open the radio, Loop several turns of smal ga. insulated wire around the loop antenna, run it
out the back of the radio and if possible out a window or if not up the wall.
(But you may pick up interferance from lighting this way) Outside is best in most cases.

tam

Al,

1. No intermod problems noticed.
2. No low battery indicator that I've noticed.
3. Like the radio. Works well, small, solid package, and great
as an FM BC RX - much better than the Yeasu radios.
4. It actually has some fidelity.
5. Yes

73,
Len

Source record: 170412

SB DX @ WW $OPDX.360
Ohio/Penn DX Bulletin No. 360

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 360
BID: $OPDX.360
June 8, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA4FFW, KH6BZF, N6ED, WA6AXE, K7BV, K8RF, K8YSE, K9VX, 9A4SP, 9A4NA, BA4TB, CT1ELP, CT1EEB, DL1CW, DL4VBP, DL7UFR, G4BUE & DX News Sheet, OK1KAG/OH9MM, PY2YP, SV1IW, F-10255 <SWL>, VK2ICV, ZL1RS and ZS6PHD following DX information.

NODXA MEMBERS TO ACTIVATE AUSTRAL AND THE MARQUESAS ISLANDS ON RTTY. Northern Ohio DX Association members Bill/W8JGU and John/K8YSE will operate from Rurutu (OC-050, Austral Islands) and Nuku Hiva (OC-027, Marquesas Islands) with the main focus on RTTY. Their tentative schedule is to operate from Rurutu Island from June 8-12th and Nuku Hiva Island from June 14-18th. There may be some operating from Tahiti as well. John and Bill will sign FO0PAP and FO0MAC, respectively. These may count for BRAND NEW RTTY entities once voted and approved by the DXAC. Look for them on RTTY on 40, 30, 20, 17, 15, 12 and 10 meters on the usual frequencies. At times there will be 2 stations on the air with one on RTTY and the other on CW or SSB. They will try to give attention to Europe as openings permit. Operations on 80 and 160 meters is reported unlikely. All QSL requests go to K8OU. ADDED NOTE. Since John is the caretaker of the OPDX Web page the site will not be updated for the next two weeks.

3D2, ROTUMA (and Fiji Islands). Roberto, EA4DX, who you may remember from last September as 8Q7XX, will be active from Rotuma Island August 29th to September 19th (3 weeks), and from Fiji (Viti Levu) September 20-24th. He will sign from Rotuma as 3D2DX and from Fiji as 3D2DX/P. Activity will be on all bands 160-10 meters including the WARC bands on the usual DX frequencies. Operations will be on SSB and RTTY. Most of his activity from Fiji will be on the low bands and RTTY. His equipment includes a Yagi for 10/12/15/17/20 meters and a vertical for 40/80/160 meters, plus a 1 kw linear. QSL via EA4DX's callbook address or E-mail QSLs to: 3d2dx@earthling.net. There is a Web page for this operation, and it can be found at the URL address: http://www.qsl.net/ea4dx/index.html

8P, BARBADOS. Dennis, K7BV, and his wife Lieska will travel here and be active from 8P9Z's QTH July 7-14th. A 8P callsign will not be assigned until their arrival on the island. Dennis will operate CW extensively on all HF bands and RS12 prior to the IARU HF Contest July 11-12th (He is expected to enter the contest as a Single Op/All Band High Power CW category). As is always the case when Dennis operates from the Caribbean, he will make special effort to catch as many Asian band openings as possible. Whenever possible, he will respond to 9BDXCC QSY requests. QSL via K7BV CBA.

9K2HN/P OPERATION DELAYED. Hamad, 9K2HN, reports that he had to delay his operation to Kubar Island (AS-118) due to a conflict. His friends (not hams) who were going to join him on this trip to the island are taking final exams now!!

AP, PAKISTAN. The "DX News Sheet" reports that Amir, AP2AGJ, is a newly licensed ham in Karachi. He has been heard on 17 meters (18150 kHz) SSB. Look for him between 1500 and 1800z. QSL direct to: Amir Gulistan Janjua, Governor House, Peshawar, Pakistan.

BI4, PING ISLAND (New IOTA!). A group from Jiangsu Province of China are planning to be active as BI4Q from Ping Island either June 13-14th or June 20-21st. Ping Island is in the Huanghai Sea, 62 miles east of the cosat. This will be the first time anyone has activated this island, so no IOTA number has been issued. They will on 80-6 meters (including the WARC bands) on CW and SSB, using a 1KW AMP, A3S, R7000 and dipoles. The team consists of Jin/BA4TA, Deal/BA4TB, David/BD4RF, Ken/BD4RD, Chen/ BD4SE and possibly others.

CY9RF CQ WPX CONTEST OPERATION CANCELLED. Dan, K8RF, reports that the reason no one heard CY9RF from St. Paul during last weekend's contest is that the operation was unfortunately cancelled due to various factors, mainly last minute conflicts with one of operator's schedule. They did not have enough manpower to properly mount the operation, so Dan felt it was best to cancel rather than do a poor job. However, Dan may help out with Mike's (VE9AA) upcoming operation this summer.

GM, SCOTLAND. Look for F5VCR and G3OCA to be active from July 10-17th from various Scottish islands (NH07, NH13, NH26).

IOTA NEWS.......
EU-032. Patrick, DL4VBP, reports that he will activate EU-032 during his holiday from June 6-20th. He will operate from two French Atlantic coast islands: "Ile de Re" and "Ile d'Oleron" (both EU-032). Besides operating SSB, he will also be active on CW and RTTY.

EU-090. The Radio Club Split, 9A2A (9A1AKL) is planning to activate Palagruza Island during IOTA contest. The callsign will be 9A8P, same as the previous expedition. QSL via 9A1AKL, bureau or CBA.

KH6BZF PROPAGATION REPORTS. OPDX InterNet Subscribers will receive Part 1 of Lee's forecast for the month of June as an additional bulletin.

MU, GUERNSEY. Tom/DL4SZ and Arno/DL1CW will be active from here June 10-13th, signing MU/DL4SZ/p and MU/DL1CW/p, respectively. Arno will be active on CW only, but Tom will be active both SSB and CW.

QSL INFO AND NEWS......
Peter, ZS6PHD, reports that South Africa has rejoined the UPU and IRCs can now be used within South Africa. The current cost for IRCs is SAR 5-00, which is worth slightly under 1 USD. The airmail rate for postal items up to 10 gram is R 1-90 to anywhere in the world, so one IRC is more than enough for ZS-land.

Steve, K9VX, reports that the turn-around time for his EP2MKO QSLs from UA6HCW is about 4 months. He just received his card for a late January contact, via regular air mail.

The 3W6KA logs are now available on the WEB. Check the URL address at: http://njdxa.org/3w6log-check.html

Jose, CT1EEB, reports that the 1997 Kure Island DXpedition (K7K) Web page is up and running. The site contains inoformation and photos. Check out the URL address: http://www.qsl.net/ct1eeb/index.htm

QSLs for CT98ELP, as well as CQ7ELP (used in WPX SSB Contest), are via CT1ELP. The address is: Pedro Pedroso, P.O.Box 116, 2806 Almada Codex, PORTUGAL

DX Log Search for Andy, 9X0A, can now be found on the Web. Logs for his 9X/RW3AH, 9X0A, and 9U/9X0A operations can be found at: http://www.qsl.net/n6ed/9x0a.html

Kingman Reef, Johnston and Howland Island QSL cards. Mac, WA4FFW, reports that all QSL cards for the February-March operations from N4DAZ/KH3 Johnston Island and for N4BQW/KH5K, Kingman Reef have been mailed. If you sent a QSL for one of these station's contacts along with a card for the Howland, WA4FFW/NH1, in the same envelope, you will have to wait until the Howland cards go out. Gene/WJ4T, Joe/N4DAZ and Mac are beginning to process the Howland at the present time and expect to have them completed in the next few weeks. Harold, K4AU, reported to Mac that he is current with all QSL cards received to date for the Howland SSB operations K4AU/WH1. Mac also reports that all cards for the previous operations of Chuck, N4BQW, from Palmyra, Tern, Kure and Midway have been caught up and have been mailed. They appreciate everyone's patience as post DXpedition requirements have consummed more time than expected.

SV, GREECE (Now on 6 meters). Manos G. Darkadakis, SV1IW, R.A.A.G. General Secretary, informs OPDX that Greece is now using the 6 meters band on a secondary basis (primary use reserved for the Greek army), therefore the Greek ministry does not issue licences for visitors (either reciprocal or CEPT) for that band. Any operation from Greece, Crete or Rhodes from amateurs other than Greek citizens is illegal.

SV9, CRETE. Juha, OK1KAG/OH9MM, reports to OPDX that he will be celebrating his graduation in Crete, June 9-15th. He did not provided us with his Crete

callsign, so he may be signing /SV9. Juha did say his planned activity will be on 40-10 meters CW/SSB/RTTY. QSL via OH3LQK (prefer via bureau).

TF, ICELAND (Update to OPDX.358). Sigi, DL7DF, and his crew (Tom/DL7BO and his YL, Ben/DL7BY, Frank/DL7UFR and Wolfgang/DL2NWK) will be active from June 15th to June 21th. They have now reported that they will be active on 6 meters besides the other announced bands. They will use an IC-706 and a 5 element yagi for 6 meters. QSL via DL7DF.

WWSA CONTEST HAS BEEN CANCELLED/DISCONTINUED. Gilberto Affonso Penna, PY1AFA, the organizer of the WW South American CW Contest and former Chairman of the Antenna-Electronica magazine (contest sponsor), became a Silent Key (SK) as of September, 1997. With the passing of PY1AFA the magazine's new Board of Directors has decided to cancel the 1998 contest. The contest was to take place June 13-14th. Some Brazilian hams are trying to make arrangements to have the WWSA contest back next year, meanwhile the 1996 and 1997 results are avaiable on the WEB at: http://www.qsl.net/cwsp/wwsae.htm

VK9, LORD HOWE ISLAND. Nick, VK2ICV, is currently looking for 3-4 contest operators willing to operate from VK9LX during the CQWW CW Contest in November. The VK8LX team will spend 10 days on the island. Nick states, "All equipment will be on Lord Howe prior to contest - just bring your laptop and tooth brush." If interested, contact Nick via E-mail at: watchman@tig.com.au -- To look at last year's operation, check the Web site: http://www.watch4you.com/vk9lx

ZK1, SOUTH COOK ISLANDS. Ed, K8VIR, who was signing ZK1EHH from Rarotonga Island (IOTA OC-013), is now active from Aitutaki Island (IOTA OC-083) until June 10th. Check 21300 and 14267 kHz between 0130 and 0800z. QSL via K8VIR (GreenValley, AZ. address).

ZL8, KERMADEC ISLAND. Bob, ZL1RS, will be on Raoul Island in the Kermadec Island Group (which is 1000 KM N.E of ZL-lans), from June 28th - July 17th. His work on the island has priority, so ham radio activity will be sporadic. Look for ZL8RS on all bands from 160-6 meters, mainly on SSB with some CW on 160 meters and 30 meters. There may also be some RTTY activity if Bob can borrow a laptop. QSL via ZL1RS only 97/98 CBA: R Sutton, 109 Wright Rd, RD2, Katikati, NEW ZEALAND

=-=-=-

- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 440-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

> rec.radio.amateur.discuss.boatanchors
>

While I'm reasonably big on netettiquette these groups just are not
that hosed up.
Any decent news reader will follow threads, filter out and filter
watch whatever you want.
I'm prone to chat here, but haven't bought radio gear out of these
groups since 3 June 98.
Things just aren't all that broken here.

Although rec.radio.personal.arguments.flames.and.name.calling might be
a needed addition :-(

I always thought poop juice refered to prune juice. I knew a fellow a
few years back whose bowels stopped evacuating for almost a week. Well
this ham was no fool. Rather than give the docs a ton of hard earned
cash he drank about 2 gallons of prune juice over crushed ice in one
sitting. He damn near blew his ass off, but in the end, after about
four hours in the head, he came clean. This is a true yankee story.

Telegraphic Shopping Service -- In addition to the regular money order service, the telegraph companies maintain what is known as a telegraphic shopping service. As now organized, this service permits of the purchase by telegraph of any standardized article from a locomotive to a paper or pins. The person wishing to make the purchase has merely to call at the telegraph offic specify the article he wishes to have bought, and pay the cost, plus a small charge for the service. Directions will then be telegraphed to the point at which the purchase is to be made, and an employee will buy the article desired. It delivery is to be made in the city where the article is purchased, it will be forwarded by messenger. If delivery is to be made at a distant point, it will be sent by parcel post or express.

From an old telegraph operators booklet, and performed with CW. What were they thinking ???

4250. ALINCO DJ-C5T MOD (Repost)

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-07 00:00:00 UTC
From: rj3@earthlink.nospam.net
Message-ID: <357a18da.789961@news.earthlink.net>
Source record: 170446

The tiny Alinco DJ-C5T is one of the EASIEST radios I have ever made a mod. to! The audio sounds pretty good for it's size, but there is a problem with all of them so far....having a large volume change between level 6 and 7 on the volume UP - DOWN buttons..

(HELLO...ALINCO....ARE YOU READING THIS?)

Here is the mod. for those who missed it a while back....

Remove the back cover.. (3 small phillips screws.)
Cut the RED WIRE LOOP located near the center of the circuit board. In fact, it is the ONLY red wire loop in the radio!

Replace the back cover. Don't forget to RESET the radio, by holding down FUNCTION and MW while turning it on......

If this mod. takes you more than 2 minutes, increase your dose of GINKO BILOBA!!

Your Alinco should now receive from 118-174 Mhz. and 390 to 473 Mhz..

Enjoy.... Rick N1QQ

After further research the owner of this bogas email address is no other then the low life James V. the idoit Obrian III (the V is for vomit, pig vomit).
So to the mr TheLibNet@aol.com I probly owe a million pardons to. I hope you can accept my pardon. Yes pig vomit is in here using other peoples names and email address's I thought that there was a simularity when he attacked first then cry foul when he got hit back!
Run wimp run. How much weight did you lose running from Paul at Dayton? I heard that you do alot of running at Dayton. How about that bowling pin wife of yours did you keep her in hiding cause you didn't want her spreading her nasty germs all over the ham sight.
Whats this I hear about the CBers in Pauling County Ga planing another drug bust with you in the center. Are you dealing drugs again? I bet you can't wait to see bubba again.
I also heard the Donna's real name is Don is this true? I bet old Bubba isn't going to be to happy about that.
I also noticed the simularty in the style of writing when one calls TheLibNet@dejanews.com a loser. He hates to hear and see the truth. Thwe truth is he is such a loser such a loser.
He has to hide because he knows that knowbody likes him. He got his butt kicked on 75 mtrs and so he hides on 2 mtrs and 11 mtrs (were he can feel like he is better than when in all the truth is he is acting better then feeling less than and is worse then the lowest CB trash.
What a loser this guy is.

4274. Bluegrass and Country music on Shortwave?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-08 00:00:00 UTC
From: jlipchik@umich.edu
Message-ID: <357c3581.21501568@news.itd.umich.edu>
Source record: 170270
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.music.country.western,alt.music.bluegrass

Hello,

I have a Yaesu FT-767GX ham HF rig that I also use as a shortwave receiver. My antenna is a Hustler 6-BTV mounted 36 feet high.

I was wondering if there are any stations on Shortwave that broadcast any bluegrass or country music. Even if the program is for only a half-hour per week, I still would like to be informed of any such music on the shortwave bands.

Please tell me the times in UTC and the frequencies that they can be heard on. I already listen to WJCR 7490 from time-to-time, but I would like some more country and bluegrass music. I would like to hear some non-religious music as well as what they play on 7490.

Thanks and 73's,
Jeff

I do belive that the last statment above is truly going to happen to
the Ham bands. A glorified CB band, breaker breaker and your giving me 7
pounds and people with over modulated signals spattering the spectrum.
Oh boy! Back to the 70's. Next thing you will be saying is disco is
cool! If we make testing to easy then we will have a pool of applance
operators instead of well trained radio operators, ready for any
emergancy. In the day of the suitcase size nucler device I do belive
that that is real important. Ham radio is supposed to be a pool of well
trained radio operators. On ten I did here a guy tell another guy that
he was giving him 7 pounds. Maybe its a sign of the times. God help us
all!
One thing that would have to happen if they were to do away with cw
is to make more room on the ham bands. Most of the problems on the bands
today are overcrowding.

Drill a hole in the center of the top of the cab and mount it there. I
have a 102 inch whip mouted on the roof of my 83 T-bird (its a piece of
crap so holes can't hurt it. All though its what is under the hood that
couts and when I step on it, it goes if you know what I'm saying). I get
great signal reports from my moble station on 10 and I have a 20 mtr
wipe mounted on the left quarter pannel and that gives me good signal
reports. I have a wipe on the right quarter pannel for 75 and I get real
crappy reports on 75 but I'm only running 70 watts. Life can be hard qrp
on 75. The best place to mount a antenna on a moble unit is right in the
center of the roof.
I hope I help you and gave so ideals too.

> Does anyone know how to expand the Xmit / receive on this HT?
Check out http://www.qrz.com for full instructions... I did it to mine, and I didn't even have to reset the CPU! Just take out the screws that hold the case together(7 of them), take out a small green SMT resistor(actually a jumper), and then put it back together. Since I can't hit many repeaters with 340mW from my location, I usually use it to listen to the local FD dispatch. It's probably a good idea to go in with a nice expensive SMT soldering station or something like that, but I just used a little screwdriver to pop that jumper out. Kinda risky, but it worked this time. Took maybe 2 or 3 minutes to do the mod(including reading the instructions).

Ha ha hi hi ho ho--Funny man, do you plan on providing us with such daily? Of course, regular horoscopes need
a person's year of birth and place of birth to have any validity (that is assuming they really have any
validity at all--a bit of a stretch I think). So, I guess that means you'll have to insert a field for call
district and year of first license. Something like this: 8XR=>you should turn the radio off, you have been
dead since 1959. :)

For all those interested..after a couple of weeks of vicious e-mail the concensus is that most of the stumpjumper/BARF people, and ONE of the Goodfellows want NO PART in a radio peace. A notable exception is K4OKA, who has surprised me by supporting an end to the hostilities. However Im sorry to say this has not been taken to heart by MOST if not all of his troops. I have not given up. Any help would be appreciated.

> has been pointed out many times by many contributors to this debate on the
> r.r.a.* groups, the internet is the real culprit.

The internet is, in fact, a convenient scapegoat for the larger ills
that ham radio faces with the younger generation by insisting on being
an anachronistic society of old farts who refuse to get with the program
of keeping up with the rest of the world.

There is NO reason in this world why amateur packet radio, for example,
could not have kept up with the internet in terms of speed and serviceability.
The technology is clearly there ... but hasn't penetrated into ham equipment.
The ONLY real reason that hasn't happened is that the vast majority are only
interested in connecting to their local BBS or packet cluster and can't muster
the vision to see that there is a reason for links that can transfer bits at
higher rates than 1980s 1200 baud AFSK ... after all they "can't type that
fast anyhow ..." (sigh) ...

The reason that youngsters are ignoring ham radio in favor of the internet
is that the internet is INTERESTING ... hams go out of their way to make
ham radio boring to kids, with their lack of vision vis a vis technology,
their refusal to accept new things, and their insistence on continual
re-enactment of historical curiosities like OOK Morse telegraphy ...

Okay, I know that this looks a little strange, but I just picked up a case of these things, all new in the box. Probably 40 to 50 years old, and manufactured by TACO, or Technical Appliance COrporation of Sheraburne, NY. Model 1433A. Described as "HI-LO-UHF MAGI-MIX". Green bakelite-ish box, approx. 2" deep by 4" wide by an inch and a half high. Has a clamp on the top that appears to be for connecting to an antenna mast. Terminal strip connections on the bottom arare labeled "LOW", "UHF", "SET", and "HIGH". Probably an rf transformer inside, although I haven't broken one apart. Comes in attractive (for the era, anyway!) box with red stripes. Never been used! I have a large quantity of these, and would like to find a home for them. Located in Portland, OR. Please respond to <mkepp@hevanet.com>

Wow, very well thought out question! I would prefer to think of the real question as, "What is the compelling reason to keep the code test?"

But to answer your question, with my opinion, is that HF attracts more people than the VHF and above bands. Once they are in the service, they WILL use the VHF+ bands, even those that are primarily HF/CW ops. In the long run, there will be far more VHF+ use by going to the slow/no code licensing structure. The service and those within it will become more rounded operators.

My friend Bill Carlow has just sent me the enclosed comments which summarise the solution he is going with, and why.
He has asked me to forward his thanks for the many ideas you contributed.

Cheers, mike Lunch
****

I do not think there is any "ONE" solution to this question; it depends on your hobby spectrum, and the amount of time you have to devote to it.
For me, however the solution must at this stage be land lines. There are three principal reasons:
1. Cost
2.Length of time available to spend on the "radio end of communications".
3. The whole family has to be able to make it work.

Some of the solutions would be ideal for someone who wants to devote more time to the thrill of the communication rather than the message itself. I think this is why the amateur band element has progressed so much further and faster than the commercial. Some of the solutions (inmarsat) would be suitable where cost is no object, and the boss must be contactable every day in order for the deal to go through. Some solutions need a knowledge of radio and electronics which is above that of yours truly; and some need a bit of hassle and trial and error to get them to work, In this case the rate at which we are moving from zone to zone is also critical, and some of the services offered are regional, with structured accounting systems etc.

The mini sat M system, using the LEO systems looks very attractive for the amateur yachtsman who wants to persuade the Mother in Law that it is safe to take her little darling to the ends of the earth, because she is always just a phone call away; but in terms of sending Latin prose and history essays back and forth across the globe the cost of keeping the schoolwork flowing outweighs the benefits; especially as from our two year trip, only some 35% will be at sea.

The spread of GSM phones and their availability within coastal waters of so many countries makes them attractive from the emergency contact point of view, and especially where data has to be sent; the old SSB should be able to get a voice message through to somewhere from almost anywhere, with patience.

I have enjoyed the contact with your forum friends, and please thank them for their participation.

4289. Where does symbol "L" (inductance) come from?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-08 00:00:00 UTC
From: David Rodman <rodman@acsu.buffalo.edu>
Message-ID: <Pine.GSO.3.96.980608200103.3133A-100000@hercules.acsu.buffalo.edu>
Source record: 170285

My wife is studying for a ham exam. She wanted to know where the "L"
comes from. I guess because "i" would have been current, but I do not
have a more educated guess. Does anyone have a better answer??

Thanks.

Weel, if it works as well as the one for the 746, it's well worth the
wait and the $$$. I picked mine up at the Heil booth at Dayton. As to
the DSP, Icom, thru one of their distributors, has announce that the DSP
is under an indefinite shipping delay. In other words, once again Icom
has underestimated the demand. You'd think they would have learned their
lesson with the free separation kit that took 5 months to get (oh well)

>D) Forget transistor switching; you can't spare the voltage loss.
>You might be able to get away with big MOSFETs but I doubt it's
>worth it.

I really don't know this so I'm wondering what effect
the loss of half a volt or less will have on the operation of
a power inverter. Wouldn't the inverter have enough
range to re-regulate the voltage?
I don't understand really what he's trying to do.
He says there's a relay console in the trunk.
I don't know if he wants to switch the main power or
wether he means to switch Items independently
I'd imagine that
some of the lower current carrying relays could be replaced
with transistors,,,,, but maybe for the sake of simplicity,
maybe he should go with relays across the board.
I guess with
automotive relays they could be replaced fairly easily
when they start to screw up.
He really needs to be more specific.

Greetings, troops-

Are YOUR dynamotor bearings greased?
Just a final reminder of the 2nd annual Vintage Field Day, June 13th and 14th. The rules are simple and modeled after those of the first ARRL Field Day in 1933.

The event starts at 7 PM local time on Saturday, June 13 and ends at 7 PM local time on Sunday, June 14.
All participating stations must use boatanchor-style vacuum tube-type equipment and only stations actually operating portable/mobile away from home addresses are eligible to subnmit scores. The usual info should be submitted with logs- Description of equipment, antennas, power sources, etc. In keeping with the 1930s-era, modes of operation are CW and AM only. And no, you can't operate on 5 and 2-1/2 meters- but 6 and 2 are fine :)

I want to add that while home and "modern" stations aren't eligible to submit logs, all are extended a sincere welcome to participate.

I want to emphasize- this is NOT a contest per se, it's a chance to meet old and new friends alike and the main goal is to have fun.
I'll be on with the ART-13/ATC and BC-348 or Gonset G-76..

Photos are solicited...Logs and comments by July 15 to:

4309. No Code Rationale? Huh?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-08 00:00:00 UTC
From: Will White <LUNCHMEATwcw@asu.uswest.net>
Message-ID: <357B950D.A7A7BD71@asu.uswest.net>
Source record: 170331
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,alt.ham-radio.morse

Someone explain this to me:

Part of the reasoning of those who favor the elimination of the code testing requirement for HF privileges is
that by keeping this licensing requirement, amateur radio is at risk of becoming extinct.

OK, now if that is true, then why is it that the threat to amateur spectrum is at 144 MHz and above? This is
also the spectrum available to the slew of new No-Code Technician licensees. The reasoning seems to be that
continuing to restrict HF access is thinning the ranks of the number of licensed hams, and thus commercial
interests will have an easier time grabbing our frequencies. There will be fewer hams to oppose them.
Eliminating the code requirement will put more hams on HF, yes, but how will that protect VHF and up?

If anything, since the opponents of code testing claim that everyone really wants access to the worldwide
bands, won't the elimination of the code requirement actually shift people to HF away from VHF+, thus reducing
the amount of usage on VHF+, and making it easier for the commercial interests to argue and persuade the FCC
and Congress that they could make better use of that spectrum?

No sane commercial interest wants anything to do with HF. HF just isn't useful for the purposes the little
LEOs and others need radio spectrum for. Since the number of licensed US hams is *currently* at its historical
high point, (source: FCC database) and sales of VHF and UHF radios and related gear is also higher than ever
before, doesn't this make the whole issue of code testing irrelevant to the struggle to retain amateur
allocations? The No-Code license has expanded the traffic on ham bands at 2-meters and up, and brought tens of
thousands of new people into the hobby, people who vote and support ham radio by membership in the ARRL and by
writing and phoning their elected representatives and the FCC. Eliminating the code requirement is not going
to do anything to help preserve existing amateur spectrum allocations.

There are other arguments for the elimination of CW as an HF license requirement. I enjoy code, I encourage
others to learn and use code, and I believe that code is still a relevant and useful mode of radio

communication. However, I would not oppose the elimination of code testing as a requirement for HF access. I
just don't think that it will do much to preserve spectrum or the standing of amateur radio in the eyes of the
public and the government. If anyone can point out whatever gaps or flaws may exist in this analysis of mine,
please do. I earnestly want to understand this issue and the debate better.

Japan gives you HF without CW requirement and they are very active on
440, 1.2 GHz and 2.4 GHz. They are now moving to 4 GHz range. Too
bad. Your statement doesn't support the reality.

4311. ICOM IC-706 MKII for sale at USD995.00 (Brand New)

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-08 00:00:00 UTC
From: klzbd@my-dejanews.com
Message-ID: <6lghpbjfh1@nnrp1.dejanews.com>
Source record: 170333

Dear hams, Brand new rigs for sale. These units are factory tuned to transmit/receive from 30Hz to 200 Mhz all band all mode continous. Can be further tuned to transmit 150W (HF) max. Don't miss this opportunity. You may need to add a US$30.00 for delivery anyway in the US for UPS charges. Send e-mail to enquire to klzbd@hotmail.com

For those who have responded to my dejanews e-mail I am sorry I am having some problems opening the e-mail, appreciate you send the mail again to my hotmail account above.

FRS will seem very limited and elementary to licensed Amateurs. However, it is filling a need for the general public. These are short-range (1/2 to 2 mile) FM transcievers in the UHF spectrum. They are all handheld units, and by law, can not use external antennas. CTCSS is available on many of them.

The reason for their popularity is their simplicity. Even a child can use one with only a minute's explanation. Some of the more common uses by non-radio enthusiasts are:
* Car to car for school and church outings.
* Keeping the family in touch at the beach or Disneyland.
* An "intercom" around the neighborhood. Call the kids home for dinner!
*Boy Scout outings. Coordinate canoe launching/recovery in the river.
* Mall shopping. The husband goes to one store, the wife to another. Helps them get back together.
* Sportsmen. Hunting. Fishing. Talking from the shore to the boat.

Hams have shown some interest in these units, primarily in testing the range of these new "toys", and in facilitating communication with non-licensed family members. However, this is not the radio service to use if you want to pick a channel and attempt to establish a general contact. In the first place, the range is very limited. Secondly, families are not interested in hearing from folks outside their group. It actually disturbs them, and many use tone-coded squelch to keep this from happening.

Prices range from $60 for very simple units to $185 for very sophisticated units with auto transponders. However, the range is virtually identical, regardless of the output power (100 to 500 mw) or price. You can expect 1/2 to 3/4 mile in congested areas (buildings, people, trees), 3/4 mile car-to-car, and up to 2 miles over water or open terrain. Those needing more range would do well to investigate GMRS, which allows external antennas, more power, and even repeaters, but which is somewhat more expensive in terms of equipment and license fees.

You are attempting something that has surprised quite a number of individuals and companies with its difficulty. Overcoming moderate amounts of interference on machine-sent Morse is now routine, but hand sent Morse is the problem as the speed varies in both the short term and the long term, along with varying dot/dash/space ratios.

I think that you will need rather a lot of samples, so it's worth your while getting a receiver. As a programming exercise, decoding one sample might be interesting, but creating a programme that could be used off-air to read typical-quality Morse would be a significant achievement.

I wish you luck, and encouragement!

The response to my listing has been great. A lot of items were sold and a lot of "tire kicking" went on. Here are the remaining items off of the original list and a couple more that I found. This list is up to date as of June 8, 1998.

Astron RS-20A 20 amp. power supply $75
CSI Private Patch V Multi-Mode connect $250
Comet VHF-UHF Antenna, Triplexer, Mount $175
Comet CX-224M 144, 220, 440 mhz. antenna
Comet CFX-324 triplexer 144, 220, 440 mhz.
Comet CQ-5M trunklip mount
Dentron Clipperton L - 160 through 15 meter amp. $350
HyGain TH6DXX triband (20-15-10) antenna $150
Icom IC-30A 440 mhz. crystal controlled FM transceiver $100
KLM 420.450.27 440 mhz. 27 element beam $75
Radio Shack 21-527 digital SWR/PWR meter $50
Swan SS-200 w/power supply 10-80 HF transceiver $250
MISCELLANOUS:
Approx. 140 feet Radio Shack RG-8 coax (new) $50
Other assorted coax, wire, etc......ask, I might have it.
These items are in excellent working order. All items are plus shipping.

Thanks for reading.................Bob.................W5YHY

> Eliminating the code requirement will put more hams on HF, yes, but
> how will that protect VHF and up?

The answer to this is really simple. Many (perhaps most?) people view
the HF ("shortwave") bands as being a primary attractor to amateur radio
and are unwilling to "take a seat in the back of the bus" as VHF/UHF only
techs ... that is not to say that those people would not use VHF/UHF were
they to become hams, just that VHF/UHF alone is not enough of an attraction
to prompt them to join our ranks.

However, once IN our ranks, many ofthese folks will see the utility of
VHF/UHF communications and help to populate those bands as well.

>
> If anything, since the opponents of code testing claim that everyone

> and Congress that they could make better use of that spectrum?

No, more licensees will be available to use those bands AND to write
to the FCC and Congress to support the protection of our bands.

> No sane commercial interest wants anything to do with HF.

That is an extremely naive assumption on your part. There are LOTS
of potential commercial uses for our HF bands. At a minimum, the
shortwave broadcasters are always wanting more frequencies.

I don't really hang out on 14.313/14.300/3901. I can't
stand listening to Rich and his arrogance. But there is
one thing that I cannot put up with, and that's Internet
censorship.

I recently read in this newsgroup that Pork Butt and his
band of cult followers, contacted the ISP of someone who
posted the warrant for Pork Butt's bad check(s). They
were able to do some threatening and some crying, and
get the page removed.

I don't go for that kind of bullshit. Shame on the ISP for
participating in this practice.

IF...this is a valid warrant and not some forged document,
I'm sure we can get it posted at another site. In fact,
I might be able to give it a unique URL! Maybe....
http://www.porkbutt.com

Please reply via this newsgroup if you wish to reactiviate
this warrant page at another site. I'll then contact you
for details.

Well
I really agree with you about the internets censorship. I thing that
censorship is the wrong direction for the internet. However What is the
differance between censorship of information and lible? Where do we draw
the line. I do belive that if a piticuluar service has their name on a
webb site Example http://www.bellsouth.net/~idoits_R_us and know that
the material on the webb site ie; idoits_R-us is lible then that makes
them responsable thus open for a lawsuit. So yes censorship is wrong but
so is posting slander. If what you say is true than all kinds of stuff
we deem illeagal would get posted. So in being a internet provider one
does take on crtain responsablities and risks.

Hello Will
I infact agree with you. I think if they did away with the code requirement, ham radio would surely die. 75-meters and parts of 20 and 10 have become no more then a giant CB band. 2 meters in some of the larger cities has become worse. I think that if we don't get some enforcement from the FCC we will have more pirates and more QRM. This in itself will kill amateur radio. I myself have already seen the decay of of the HF part of the spectrum. Its going to haties in a hand basket. I do belive making the amateur radio license easier would just amplify the problem. In fact I think that the VE testing is a mistake. The spectrum is full of examples of this. I wonder how many hams bought their tickets. I belive that the tests are to easy today. Anything worth having is worth working for. This is just another example of Americains getting lazier and lazier. I could be wrong but this is just my opinion.

Let me point out that I am neutral on the issue of eliminating the code requirement, though leaning towards
favoring it's removal at WRC-99. If dropping the code will bring more people into the hobby, and if that it
turn will preserve our spectrum, I am four-sqaure behind the initiative to revamp licensing. I am not
convinced that the code is even a significant reason why more kids don't get interested in amateur radio. As
has been pointed out many times by many contributors to this debate on the r.r.a.* groups, the internet is the
real culprit.

On your second point, shortwave broadcasters are moving as fast as they can to satellite radio. The services
in affluent countries certainly are. RCI, NHK, ABC/Radio Australia, Deutsche Welle, Radio Nederlands, even old
BBC and VOA are shifting their new technology budgets to SCA on the birds. I suppose an argument can be made
that the influx of US-based religious SW broadcasters in the last 15 years is a threat to amateur allocations,
but if it is, the threat is a diminishing one, as many member countries in the ITU complained loudly at WRC-97
to the FCC about their policy towards American evangelical broadcasters and the broadcasters' ignoring of
content and technical rules stations in all countries are supposed to observe. It will be a while before we
see SW broadcasting go the way of the spark gap transmitter, but the process is begun. Many national services
are annually threatened with budget cutbacks or outright shut down, Radio Nederlands and RCI most visibly
recently. I don't know about the "potential commercial uses" of HF you refer to, but I'd like to hear more
about that. Can you tell me what industries want HF spectrum, and for what applications?

New from Yerscrewed Japan- the black box transceiver.This compact wonder hooks right up to your Windows 95 PC and you'll then spend your days wondering why you bought it and why it doesn't work without 32 modifications to it. That's what you expect from Yerscrewed, because Yerscrewed is SIMPLY A MESS.

The black box receiver is just that-a black box. Not even the designers in Japan know what parts the computer aided design stuck in it. No one has dared open it. And, just look at the detailed manual !

Step the one- take you the box out of the box and unbox. Put next to computer running windows but not near windows because of heat from sun but not put near refrigerator because of risk Tang spillage.

Step the two- hook receiver up to your computer ruining the Windows 95 but not the Windows 98 because the high power transmitter make the planes nearby crash, then you want need if like perform harder reset.

Step the three- hook you the transmitter to low-loss coass but not to 75 ohm coax because it will resist your signals and spray all around you and make the big electrical bite. (The caution- never let the small things the dog, the kids the XYL bite the transmitter for is bad danger)

Step the four- make sure you not hook the tansmitter, receiver and transceiver (or transverter if you the simple Tech) to same antenna for then the transmitter blow GAasFET in front panel dial where tuning knob hook to receiver but if using new black box receiver ignore this step

Step the five- Get on make you first QSO using instructions come with you Windows 95 for using this new transceiver you now proudly to own.

4332. Installing a mobile antenna on a 4x4 light bar?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-08 00:00:00 UTC
From: Highdesertman@zerojunk.yahoo.com

Hi all

I have long been pondering the best way of installing a mobile 2m antenna on my 86 toyota 4x4 pickup with fiberglass camper shell. Obviously, the camper shell is out unless I use some sort of mobile J. An Idea has recently come to me that I would like to solicit comments on. Has anyone had any experience installing a mobile antenna into the center of a off road light bar rack of the type that bolts to the rain gutter of the cab roof? If it would make a good ground plane, I could simply drill out the mounting position in the light bar rack and install the motorola mount directly into it's underside just as if it were the trunk of a car or the roof of the truck cab. Will antenna performance be affected by doing this? will I be limiting myself to a particular kind of antenna by doing this? Comments and questions are welcomed and appreciated.

Cheers

HI all

I would like to hear from owners of older toyota 4x4 pickup trucks (I have an '86) on the subject of where they mounted ham radio equipment. I have been playing with many ideas on how to mount a Yeasu FT - 2500 in my truck, and the problem is space and mounting surfaces. I have very little choice in mounting surface because of the design of the interior and the fact that I want to be able to take passengers in the passenger seat after the installation. If I wanted to devote the passenger side to Radio equipment it would be no problem. My Yeasu has no remote head design.

Thanks for your input,

My question is; Is the warrant valid? Or is it fake? If the warrant is real, and is public record then it should be legal to post it on the internet. Is it public record? In some cases part of the deal between defendents and lawyer for the state, is that the records become sealed (a stet dockit is a example of this the case becomes sealed) never to be opened again. Another question is what good does posting trash like that bring? All it brings in my mind is another form of hate which seems to be spreading its ugly face not only on the internet but on the ham bands as well.
YES!! I do beleve in free speech and free press, with comes a greater responsabilty and that is to print or say only the truth. So if the porkbutt warrant is the truth, post it, but if it is a lie then Rich has the perfect lawsuit for slander and lible not only against the producers of such page but the providers as well. With free press and free speech comes a great resonsabilty to produce the truth. There are laws that protect people from slander and lible. Remeber the right of free press and sheech is only free until it steps on the rights of another person then it becomes slander and lible.

I need a drawing and other specs on the raising fixture that is available from US Towers for their TX and HDX series crank-up towers. I may want to buy one to go with a tower that I bought from an estate, but I need some specs and drawings for the building permit. US Towers will sell the engineering data, but I already have it (came with the tower) except for the raising fixture.

Any help?

Yes- his endeavor should be interesting. I am about to make a program in Visual Basic that transmits morse code through the sound card, but I would never think about making a program that decodes it! I wish him luck, too.

(Maybe I could get a copy... :)

I refrained myself from saying anything until now.

Here is what I want to say:
In amateur radio, frequency inversion or any kind of [de]scrambling or
[de]coding technique is not allowed to be used anywhere at anytime. The only
type of 'coded message' allowed is for beacons/wave propagation and one way
transmissions to model craft.

Also, spamming newsgroups is rather rude, especially when it is the same
message over and over. I notice this in the scanner group, but it is rather
legitimate there. In an amateur radio group, it is not. If you could get
your ham ticket, you would know exactly what I am talking about.

Please take this criticism constructively.

code requirement illimination is imminent. for better or for worse, the writing is on the wall. the focus should be on the future, rather than on lamenting the past. what is the future of amatuer radio? how do we grow our numbers, control/reduce harmful interference, evolve with technology, and hold on to our bands?... or do we just digress into glorified CBism and eventually lose most of our bands. If there is one thing we all know about capitalism, it is that it will find a way to eat our spectrum, high and low... nothing will be safe... and an inconsequential stereotyped group of nostalgics will not stop it. A new unified image will be required if amateur radio is to survive.

>easier time grabbing our frequencies. There will be fewer hams to
>oppose them. Eliminating the code requirement will put more hams on
>HF, yes, but how will that protect VHF and up?

The reason that spectrum is being threatened at VHF+ is very simple: it is
more useful to commercial interests than the spectrum that occupies
0-30Mhz. It's obvious why isn't it?

>If anything, since the opponents of code testing claim that everyone
>really wants access to the worldwide bands, won't the elimination of
>the code requirement actually shift people to HF away from VHF+, thus
>reducing the amount of usage on VHF+, and making it easier for the
>commercial interests to argue and persuade the FCC and Congress that
>they could make better use of that spectrum?

Uh. No.

I believe that the removal of the code test requirement will result in
a net increase in the number of ham operators operating on HF. I also
believe it will result in a net increase of hams overall, and also
renew interest in all aspects of ham operation. More hams, with more
of them operating == more clout in Washington. It's just that simple.

>The No-Code license has expanded the traffic on ham bands at 2-meters
>and up, and brought tens of thousands of new people into the hobby,
>people who vote and support ham radio by membership in the ARRL and by
>writing and phoning their elected representatives and the FCC.

Actually, it appears that the ARRL has completely failed in their attempt to
bring Technicians into their organization. Perhaps it is because they are
such abject failures at supporting their opinions and desires?

Dear Sirs,

What I just expressed to this hun was he will never succeed in stealing the virtue of Lady Liberty with his fasicist views. Germany is free right now my dear friend, and will stay that way as long as the Allies possess superior nuclear forces. Any attempts by your type to uproot the democratically elected representatives of the German people would be rewarded with the most severe political and perhaps military repercussions. Do not ponder coup d'etat, foolish huns, for the good peole of Germany, the honest people of Germany, will have none of it. See also there are no Edward V's or Joe Kennedys in a position to collaberate.

I am sir, your indentured servant,

Raul Bloodworth, esq.

4350. FOR SALE: Vertex VX-10 VHF Handheld Radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-08 00:00:00 UTC
From: jlgrif3@aol.com
Message-ID: <1998060801223600.VAA03824@ladder03.news.aol.com>
Source record: 170417

FOR SALE: Vertex VX-10 VHF Handheld Radio

-Almost brand new - barely used.
-Great Condition
-Small, and lightweight
-5watt Transmit power with high power battery
-16-button DTMF Paging Keypad with voice recorder
-Drop-in charger
-Antenna
-Wall power pack
-Computer Programming Software
-Extra 5w battery
-120 Channels with ALPHA display
-Softside case
-Warrentee information and original box with instructions, etc...

For price and other information email JLGrif3@aol.com

4351. Heil inline mic preamp

Newsgroup: rec.radio.amateur.misc

First of all, thanks to everyone who's helped me in becoming a ham.

I've finally decided I don't need DTMF. I don't need any features except at least 1W output, and a $100 2M HT that works. :) But, if the radio is cheap and it's got DTMF and/or extended receive, that's fine. Heck, maybe I'll find $500 on the street and get myself a dual bander. I will be getting my license this month.

I will probably buy the Yaesu FT-23. Could anyone recommend any of these radios? I am going to do a newsgroup search on the Yaesu and see what people think of it.

I've narrowed my decisions down to these HTs (in order of "purchase probability"):
- Yaesu FT-23 ($119, ex rx, DTMF)
- Alinco DJ-190TD ($99, ex rx)
- Kenwood TH-21AT ($89, ex rx?, DTMF)

HTs which I can't buy, but I like:
- Kenwood TH-235AH ($189 list, ex rx?, DTMF)
- Alinco DJ-G1T ($150, ex rx, DTMF)
- Alinco DJ-C1 ($160, ex rx, DTMF)

Thanks again, and let me know if I should get one of the three first HTs I listed!

>
>

For Marine use, the rig must be type accepted for that service. However, for Amateur use, it need not be. We as hams are entrusted with making certain that our ham equipment is within specs. This suggests instead of using a ham rig on Marine freqs, use a type accepted Marine HF transciever on Amateur frequencies. SGC and SEA are two brands that come to mind. Both are much more resistant to moisture incursion than the Icom. Be aware that many Marine SSB rigs do not have a built in CW key jack, and for a given power output, CW will have an edge over SSB. Though you cannot operate CW on Marine frequencies without a ship's radiotelegraph station license and a radiotelegraph operator's certificate, you can still use the ham bands for CW. Keep that option open. I believe the SGC rigs all have built in CW capability. Another concern is that some Marine SSBs have a channel mask, usually in an EEPROM, that blocks transmit on other than Marine channels. The dealer can easily disable this on request, usually. SGC probably does not have this mask, as they advertise their gear as being for Marine OR ham use. Check it out before you buy.

True, in an emergency, all bets are off, and you can use whatever means are at hand for communications related to te safety of life or property. However, in practice it is far better to use methods, modes, and freqs that are already otherwise legal for you FIRST in attempting to communicate. An example is a hiker in CA, I believe, with an HT he had programmed for some of the local law enforcement freqs. There was some kind of emerg, and he called the cops on their freq. Smart? Well prepared? It was an emergency, too. Perfectly legal, right? Well, yes and no. Yes, he was prepared... a little TOO prepared. The FCCs position was that there was foresight and intent to use unauthorized frequencies ssince he modified his radio for them. He got help alright, but probably could have got help through another ham also,on authorized freqs. The feds took his rig, and I think he got a small fine too. Just be aware that this

can happen. If you are planning to use Marine SSB for emergency traffic, do it right. Plan on using a legal rig, since you are planning in advance. high cost will be no defense, since cost must not be the primary consideration in emergency comm gear. Also... get that ham ticket! You will learn a LOT more than you know now about station setup and operating practices for effective comms. It is not nearly as simple as it appears at first glance, but in studying for the various grades of license you will be exposed to a well-rounded knowledge base. Your immediate goal should probably be the General class license, but certainly not the codeless tech, as on an ocean crossing, without satellite communications, your only option is HF.

As for the mod to open up general coverage transmit, I can't help you with the Icom. I know how to do some of the Kenwoods. Be aware that output filtering is NOT optimized for commercial bands so unless you have a specific, off the air use for the modified rig (Makes a dandy test oscillator with the output turned down to a few milliwatts!) you should probably reconsider.

Bottom line summary: get a SGC Marine/Ham transciever with CW capability, consider getting professional installation unless you know exactly what you are doing with antenna matching, grounding, power supply setup etc,, and get your ham license. That's the way to go rather than doing a questionable diodectomy on an ordinary ham rig.

Is there anywhere I can get the Alinco DJ-191T HT for $120? Everywhere I see it, it is $189+. This looks as good as the DJ-190, but it has all the features I want. If not, I will go with the DJ-190, which has extended receive, but no DTMF. I still would like DTMF, but I decided I don't need it.

If all else fails, I will get the Kenwood TH-21AT for $90.

It is very unlikely that you would find such a combination of any numerical consequence. Since it requires at least a modicum of intellegence to become a radio amateur, it is unlikely that the same individual would regress in his musical appreciation to the repetitive droning of bluegrass music. This type of music is more associated with the least intellegent and basest beings of a culture. It is more likely that there would be a large group of individuals interested in both CB and bluegrass music. The intellegence level there would be more consistent with the repetitious droning and boredom of the mentioned music style.

Body handling: Binary attachment payload not displayed: vcard.vcf

Hi:

I am an apartment dwelling advanced class amateur, KG8SU, Ex KB5ENR. Curtis Scholl. I would like to cast about to find someone in Ann Arbor/Ypsilanti Area who would let me use his rigs and antennae for a few hours. I used to own a set of Drakes.

Being an apartment dweller, I can not have the antennae that I used to have. I am having severe withdrawal pangs for HF DX. The Radio Shack DX390 is a good radio, but my antenna system is a wire with an ATU.

Would anyone out there in A^2 or Ypsitucky mind if I used their equipment, at there home, just to listen in on the top bands ???????

Curtis Scholl
KG8SU ex KB5ENR

4360. Loud Mouth Mo-Beel Hams

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-09 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6lk1kgdtt1@nnrp1.dejanews.com>
Source record: 170227

Why hams in the mo-bull mo-beel yell into their microphones

1.No one listens to them in person, they want to make sure they are heard
2.Yelling increses their readability on FM considerably
3.They increase their listening audience to surrounding vehicles who have yet to discover the "magic of ham radio"
4.The louder they speak the warmer their rigs get- in the winter this results in lower automotive heating costs
5.They are mad because they are tourists and some "wise ass" on another repeater has told them there is a candy store nearby, when the poor ham who told him thought the tourist wanted chocolate, not radios
6.HI HI simply doesn't have the same emotional effects as "ha ha" on phone
7.They are pretending they are something serious like dump truck drivers or helicopter pilots
8.They forget to key the mic and have to yell over the QRM from the radio
9.They were licking the chocolate they bought at the candy store off the mic and swallowed it

Come to the Dennis hamfest June 13 and see the two cheapest groups of people on Cape Cod. Hams and the people who come after the flea market with metal detectors.

I agree.
I found quite a few radio hams last year when I was on vacation in
Virginia who were into playing/performing bluegrass.
I'm a radio ham,a field applications engineer for a USA-based
silicon chip firm as well as a fan & occasional player of C & W,
folk & bluegrrass (have 3 acoustic guitars + a banjo).Into midi
composing/editing as well.
Also into analogue & digital satellite TV dx-ing -searching the
skies for unusual satellite links & OB stuff.
What's wrong with diverse hobbies ???

I'm currently learning the guitar. Already learned CW and got general.
Learning to play music is one heck of alot more demanding
that learning dits and dats.

As for bluegrass being low-brow, checkout how much a ticket
costs for the Teluride,CO bluegrass festival coming up.
Doubt there will be a HAM in the audience. ;-)

This garbage IS spam.

Do you think you can buy sell, trade or swap using using the swap group?
Don't hold your breath.

As to your queries; "I ask why do we have seperate groups", I respond what
does it matter? If it is so repulsive and reprehensible, don't get on the
groups!
It is not a mandatory thing. Please go rinse the starch out of your
shorts, or
perhaps it is better said, "Don't get your panties in a bunch!"

Cheers! May you have a bad day.....

Dear Burt,
I will continue to express my concern that you have not yet sought help for your condition. These periods of hallucination you experience will not go away on their own and you must seek guidance before it is too late.
Please ask someone to drive you to the nearest facility and check your-self in, if not for your own benefit, at least for the sake of your long suffering family. They deserve you at your best and need you for the long term.
There are many programs that will help for little or no payment, so it shouldn't be a financial burden. Even at that, perhaps your fellow hams would be generous and help you out.
I know you mean well, but your continued posting of the same messages over and over mean that you have lost your ability to say meaningful things and you need "Expert" help, not the advice you are receiving from your ham friends, well meaning though they are.
I wish you continued success in your career as a small town community college instructor and only hope that your condition does not adversely effect your position there.
Wishing you the best.

Where did you get your doctorate from-Moe Howard University? Bluegrass
isn't one of my *favorite* types of music, but I have yet to hear any
"droning" in it. Your condescending attitude is a pox on these newsgroups.
You're obviously one of those classical music fans who thinks 'their'
music is superior to all other musics. Wake up. Your music has been
getting on people's nerves for hundreds of years now.

> B) Fuse it at the battery.

I knew a guy who had a 800 watt linear on his CB in the trunk. He tran
a piece of welding cable to it from the battery. But no fuse at the
battery. On day his exhaust pipe got too hot and melted thru the
insulation on the wire, and it caught FIRE!

So he had to learn the hard way about fusing circuits.

Burt,

Another Award which could awarded is the J-A-M award:
two qualifiers:

1 a "close"friend of K5BLB and KK7HO
2 Have a desire to be a pain in the ass on the Radio:

Present honorary members are:

K5BLB
KK7HO
N5HDQ
WB0CXJ
W9ART
K5ZU
K1GKM
WA9KJI

more will be added later

My old electric shop teacher said an inductor is a coil and a coil is a
loop -- thus L
Could be -- but I never saw it in any reference book.

"I" by the way is for intensity (elecron flow), thus "I" got in the way
of "indicator" so some one came up with DS -- Device Signaling -- for
(indicator, bulb, lamp) -- from the days of mechanical annunciators I'm
told.

"I" got in the way of impedance also -- so they gave up and called it Z
(just kidding on this one).

E is electromotive force (and V is for vacuum tube).
C is for condenser before they became capacitors.

Diodes are CR's because at one time the solid ones were made of a
crystaline substance, except of course for a vacuum tube diode.

A Mho (Ohm spelled backwards) is a unit of conductance -- the reciprocal
of Ohm - resistance.

k is for kilo but K is for Kelvin (computer types haven't got it right
to this day!! And a kilobyte is NOT 1000 bytes but rather 1,024.
In decimal systems, kilo stands for 1,000, but in
binary systems, a kilo is 1,024 (2 to the 10th power).

Many units were named after famous scientists -- Ampere, Volta, Ohm,
Bel, Watt, Oersted, Faraday, and the galvanometer was named after

Galvani who frazzled frogs legs with electricity and watched them jump
-- inspired Frankenstein electrodes I'm sure!!

You can often pick up a DTMF dialer for very little. I got a couple for $2 at a hamfest a year or so ago, and use it with my DJ-S41 440 HT. I have seen them elsewhere at other times, too. If DTMF is something that you don't need right away, you might consider getting the radio without and keeping an eye out for a seperate dialer. Good Luck!

Hello everyone......!!

I have the TM-251E. Can i remote control it and put on the Repeater
function? If anyone can help please reply.

I spent a fair amount of time working on algorithms for CW decode, and
receiving hand sent CW is not a problem - so long as the signal is
clean.

Somewhere on this disk is a "bad CW sender" which I wrote to test out
CW receive algorithms. It adds or subtracts a time chosen at (pseudo-)
random up to some limit to each element - dot, dash, element gap,
character gap, etc, and would change speed rapidly. The badnes sof the
CW was tunable by adjusting the random limit.

(That's actually worse than hand sent: most bad CW senders send
consistently bad morse - purely subjective opinion from what I hear
on the bands.)

My best decoder - I linked a couple of computers together, one sending
bad morse, one running my trial algorithms - could decode CW that was
so bad that I could hardly read it myself.

But decoding ons and offs which comprise the CW is only half of the CW
receiver: the other half is something which listens to the audio from
the rig and turns it into those ons and offs. The best purely analogue
circuit I came up with was a couple of narrow filters, both centered
on the required signal, one wider than the other. Put a precision
recifier on each, and then put the two outputs into a comparator. The

idea was to compare (tone plus 300 Hz noise) to (tone plus 100 Hz noise), hoping that with suitable weighting the noise bits would cancel out, leaving just a tone/no tone signal.

That did work - but it was very, very finicky: the balance between the two comparator inputs had to be set just so.

With a bit of software assistance (ignoring brief dropouts and glitches) I ended up with a system that I could tune to a weak signal, and would follow and decode the CW as QSB took it down into the noise below the level at which I could decode it. But it was one of those "sacrifice a chicken" jobs - not at all satisfactory for everyday use.

About that time life dropped a few bricks on me, and the project had to be shelved pro-tem. I think the next stage - if I get chance - will be to do the analogue processing digitally: either in a dedicated DSP, or perhaps just in the computer.

But I have some interesting learning curves to climb before I go down that road...

> I think that you will need rather a lot of samples, so it's worth your while
> getting a receiver. As a programming exercise, decoding one sample might be
> interesting, but creating a programme that could be used off-air to read
> typical-quality Morse would be a significant achievement.

Yup. What would be *really* impressive would be to do what a human can do: present it with an audio signal containg two CW signals, at different frequencies, and get it to decode either the high one or the low one.

4388. deaf ge master2 repeater-help!!!!!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-09 00:00:00 UTC
From: kc5swi@flash.net
Message-ID: <357cc984.269163613@news.flash.net>
Source record: 170297
Body handling: HTML body converted to readable text

I have a ge master 2 vhf 110 watt radio converted into a repeater on 145.230/144.630.

The radio is set to output 35 watts into the wacom duplexor, up the 80' of 9913 coax, to a 5.5 db verticle cushcraft antenna. Transmit is fantastic, nearly 30 miles . However, recieve is poor at only about 10 miles using a 50 watt mobile with a high gain antenna. I can still recieve the repeater full scale when it cant hear me!

The radio was professionally tuned up on frequency and the icoms trimmed out. The nhrc internal repeater card works great.

My master 2 does not have an internal or external preamp. Should I add one?? How well does the ge internal preamp work?

I recently purchased an additional 100" of tower, a db-224 commercial style antenna, and 200" of 7/8 helix to try to resolve the poor hearing ability of the repeater. I fear it will transmit 40 miles after the improvements, but still only hear 10 miles.

I realize there is loss through the duplexor. I am running a pl tone of 110.9.

Any suggestions??

Thanks in advance for any help, please e-mail responses if possible to kc5swi@flash.net.

Having gone the route you propose I would like to add that you may not get
a good ground plane off the light bar. You can tell because you won't be
able to tune the wipe. I placed a sheet of metal under mine that is about
half the size of the roof. It (the wipe) works great now. Have fun...

go to www.artscipub.com

or read on

NOTE IF YOU DO THE FOLLOWING YOU VOID YOUR WARRENTEE AND I AM NOT
RESPONSIBLE FOR DAMAGE.

WRITE DOWN FREQUENCYS YOU HAVE IN MEMORY AND TURN POWER OFF..

open your case by removing the 3 screws on the back <2 near antenna 1
where wrist strap goes>
then remove the 4 in the battery compartment

open case and look where the speaker is

to the left of the speaker is a little resistor / capacator and just
pushed it off the board how ever you may want to unsolder it with a
microtip solder iron.> it has in white letters OC/??? that is what
you must remove.

when done

close case

and with power off press the function key and turn power back on THIS
MUST BE DONE AT SAME TIME.

I have done it and got from 135.00 - 175.00

Source record: 170309

I have a boat with an ICOM IC-728 ham set. I am not a licensed ham
(though I am working on learning my code). I do have a license for a
marine SSB. We are heading offshore, and I would like to be able to
transmit on the Marine SSB frequencies for safety & communication with
the AT&T High Seas Operator. My IC- 728 can receive the marine
SSB frequencies, but not transmit on them. I have heard that you can
modify the set so that it will transmit on the marine SSB frequencies.
Anyone know how this is done or who you can contact to get it done?
If it is possible to make the set transmit on marine SSB frequencies, will
I get in trouble if I use it for non-emergency communication?
Any help appreciated.

The light bar won't be a very good groundplane. Basically, it will behave
as an untuned pair of radials. It may work out Ok, but it will be a compromise
compared to drilling a hole in the center of the roof and mounting the antenna
there. That's the best way to mount a VHF antenna on a vehicle. If you just
can't stand the thought of drilling into your truck's roof, then glue/bolt a sheet
of aluminum to the underside of the camper shell and drill through the camper
shell and aluminum for the antenna mount. (You can get by with just gluing
aluminum foil to the underside of the camper shell, but an aluminum sheet
works better electrically, and adds some mechanical strength to avoid pulling
the mount out of the shell when you hit a limb with the antenna.)

Andreas,

Since this is a new motor skill for you, and as a left handed person I am sure you are already quite capable with your right hand, may I suggest you learn to send with your right hand from the start. This leaves you left hand free for writing and you never drop your pencil. As to which paddle does what if it doesn't work the way you want just reverse the wires on the paddle. Generally they are attached with screws and lugs so it is very easy. I don't think it really matters where the dashes are but I am not that active on CW my comments were more about being left handed. Best of luck.

A) Get a piece of appropriate cable. I'd say #4 or better. It's not so much the current rating you need as minimum drop; at 13.8VDC you don't have as much to lose as at 120VAC.

B) Fuse it at the battery.

C) Use a contactor at the battery. Note that most starter contactors are not rated for continuous duty. But a similar looking beast is out there; it's used for paralleling batteries in RV's etc. Try auto parts stores.

D) Forget transistor switching; you can't spare the voltage loss. You might be able to get away with big MOSFETs but I doubt it's worth it.

E) A viable option is a small second battery in the trunk and a special splitter so the alternator charges both. This also means the car still starts when you leave something on. Try the RV market for the splitter.

F) I'd be least worried about alternator capacity. Vice my 30 amp Beetle with a GE Prog line days, most cars come with lots of alternator capacity; I've seen 120amp ones!

4405. Re: The FT-50 is a piece of SHIT.

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-09 00:00:00 UTC
From: Mike Puchol <mpuchol@nospamm.eurohubner.com>
Message-ID: <6ljkc8$jp3$1@talia.mad.ibernet.es>
Source record: 170314
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

First, MIL STD-810 (the one for the 50) is about environmental protection, not
about mechanical characteristics.

Second, free fall is 1g, as we are still under the influence of Earth's gravitational
field.
The forces experienced by the radio upon impact with a solid surface depend
on the radio's mass, it's velocity at impact, and the time it takes to decelerate
to a stop. As we all (should) know, force=mass x acceleration, and with a few
energy calculations, we can work out that our FT-50 will be travelling at about
5 meters/second at the time of impact, at a fall from 1 meter (three feet).
Now, we have to consider the surface on which it falls. A carpet is a 'soft' surface,
so the radio can travel a couple of millimiters before it stops, and so the deceleration
is much lower. On a hard surface, the deceleration is even greater.
Suppose that our carpet is nice and fluffy, so the radio can travel 2 mm before stopping.
At 5 m/s, this means that it takes 0.0008 seconds for the radio to stop.
So, if we divide speed by time we get acceleration, in this case being 6250 m/s squared,
so if 1g=9.81 m/s squared, then the force experienced by our radio is 637g's.

Much more than the radio was probably intended on taking. Look at your hard disk's
features, and you will see maximum shock specs. For an idle, not powered HD it is
about 300g's. This looks impressive, but it isn't so when you work out some numbers.

Regards,

Mike

There are a lot of pros and cons... one school of thought is that you should be able to use the standard right handed configuration, and that your sending skills will develop almost as quickly as with the left handed setup. If you operate somebody else's station, you will already be familiar with their setup. Also, if you buy a bug, you will find very few left hand bugs. The other school says you will be faster sending in themore natural way. Frankly, I question the need to gain competency atover 30 WPM on our crowded bands anyway. Probably 90% of all hams will be unable to copy you. My advice? try both, pick the one that feels natural to you, and if it is the left hand method, then occasionally switch to right hand style for a bit of practice so you can operate that way if the need arises.

I haven't touched a paddle in years and don't care too. I use a straight key, and occasionally a bug, and rarely, my computer. There is a certain simple elegance to using the straight key, and a good clean fist gives you something to be proud of. Speeds of over 25 WPM are attainable, though I am stuck at around 20-22. Hint: forget about straight up/down motion of the key. Bring the lower surface of the thumb in contact with the index finger quite near the tip. The tip of the index finger and the outer side of the thumb will be in contact with the key knob. Rest the edge of your hand and little finger on the operating desk and use a bouncy, rocking motion of the hand to manipulate the key. For this to work at higher speeds you will probably need to secure the key to the desk with screws or double sided tape. I don't like rubber feet as the small amount of "give" is disturbing at higher speeds. You can secure the key to a piece of plexiglass about 8 inches wide and long enough to rest your entire forearm on it. This is almost as good as screwing it directly to your desk.

With a straight key you don't have to worry about right hand / left hand. Another plus.

Hello,

I was wondering if there were any bluegrass musicians who are also licensed amateur radio operators. If you know of any, please e-mail me with their callsigns or post them onto this thread.

I am also looking for a combination of a bluegrass festival/hamfest in one event. Do any such events exist anywhere in the USA? If so, I would be willing to travel anywhere in the USA to attend such an event. Probably all of the bluegrass performers would be licensed hams.

Please e-mail me or post to this thread.

Thanks and 73's,

Jeff

Thanks Rick and Gary for your input. Gary, I especially like your
idea. Two more questions come to mind;

1) Rick, you and oris mentioned a term I am unfamiliar with. The term
was "Wipe". Can you tell me what this is please?

2) Gary, I like the idea of bolting aluminum sheeting to the underside
of the camper shell to server as a ground plane. I take it the

thickness of the sheeting isn't of electrical importance. However, I take it that the size of it is. How big should the square/rectangular section of aluminum be to serve well electrically?

thank you my friends,

Hello,
I have for sale the following items. They were purchased on 11/97, used very little:

IC-W32A.......Dual bander HT. Modified to receive and Transmit out of band.
IC-LC128...Carrying case.
IC-BC119...Desk charger.
IC-AD51.....Battery Adapter.
IC-BP171...4.8V 700Ma Battery
IC-HM75A..Speaker Mic

Everything is in excellent condition. ALL includes boxes and receipts! The HT also comes with another battery pack...so there is the low power and high power battery packs.

Asking $450 for everything...and I will ship first class insured.

Thanks..
Art

I own a HTX-202. I have found it very good and reliable. I do alot of bicycle mobile and it gets quite a lot of bouncing around and has worked flawlessly. I have a friend who is a commercal house and building painter. His looks like the rainbow but still "keeps on ticking". The only reason I would consider another 2 meter radio would be if weight were a concern (like backpacking) or if I felt receiving frequencies outside the ham band was important to me. Good luck. You can't go too far wrong for $120. Back when I bought mine several years ago they were over $200.

The W8MMQ Amateur Radio FTP Server has been updated, and will now grow daily! We have thousands of amateur radio files online, including amateur radio mods, documentation, FCC Forms, tons of shareware, and much more!

We will soon open up the server so our visitors can upload files for our inspection and review. They will then be incorporated into the archive.

You can access the server at ftp://w8mmq.ml.org/pub/hamradio/. Please tell others about it, and visit yourself! With your help, we can make this one of the most popular amateur radio FTP sites on the internet.

Well, in the event this isn't a troll attempt, I'd add that a) not everyone can afford a legal- limit amplifier b) a large part of the fun [for me, and I know for many others] in ham radio is discovering how much you can do with modest equipment and power. c) the learning curve for obtaining a good signal by other means than kilowatt output is steeper. You need to apply more brain 'power' to optimizing a station with 100-200W. An amp will do nothing for the receiver in your station. d) you can't take an amp with you on a wilderness trip.

The ham who was my first 'elmer' back in New York never ran more than 400W, and he had over three hundred countries logged, 5 bands, and about 150 on 6M. And I learned what I consider a very valuable lesson from him, that all the time and expense one can put into an amplifier and its installation is better spent on receiving technique. I watched Jim pull many DX weak ones out and make very fine contacts using 150W and a magnificent array of dipoles and long wires (he had a Beverage almost a mile long), SSB and CW, while the kilowatters were endlessly calling CQ. This was before DSP even.

Okay,,,,,,
I was waiting for someone to tell me that bipolars
have Vce sats of 3 volts or more at current levels
above 30 amps,,,,, then I planned to bring up the
Vce sat of the MP500 germanium xstr which is
.45 volts at 50 amps,,,,, Well,,,,I called for a price
on this germanium wonder and found the price to
be about $34 dollars with tax,,,,,,, ouch!!
Maybe he should forget about xstr switching.

This is a thread from the Liberty NITS mail List. Notice how N2SAG is sugesting more programming, muliple "broadcasts", on different bands, and in his own words "Just like the commercial Talk shows". They have been doing this now for quite some time and refering to the listeners, making ONE WAY Transmissions, playing Broadcast news Tapes, giving out 1-800 numbers to purchase these tapes and videos and noow they want expand the "Broadcast" READ ON

Sounds like a good Idea, I would be willing to try but the followin will
hinder me for the Next few weeks:

I need to look at getting QSL.NET to host the RA feed, maybe someone could
talk to AL, who runs it.
I'm gonna be on vacation the last weekend of june and July 4th Holiday, too
bad though we could have specail edition of "Liberty Net" for July 4th, I'll
have a radio but probably no tape nearby.
I don't know how fully on how use RA files, I've downloaded RA basic server
free off of the real site but need to figure it out.

Let me know your input. (I'll try to listen to 3950 at work tonite)

4425. No Ham Exams at F. I. T. in Melbourne, FL 6/98-7/98

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-10 00:00:00 UTC
From: wnewkirk@iu.net
Message-ID: <Unmf1.287$vF4.1075058@news1.atlantic.net>
Source record: 170174

At the present time, we had a room conflict and had to suspend holding exams at Florida Institute of Technology this June and July (someone booked the entire college up both weeks involved...had to happen someday, we usually were skirting the SPEBSQSA "Sizzle" folks every 3-4 years..they're probably one of the "blocks" on one of the months for sure...)

So today, I get the room reservation form that's been around forever...only now they want $250/quarter (including sales tax) for the room reservation. That's $1000/year for 1 class room for 3-4 hours. Yow.

Even during the peak years of the early 1990's, we'd not have enough folks to justify that, even if we could charge a premium for taking the exam there.

I'll have to get the gang together to review the options. Maybe they're open for a counter proposal. We've been doing exams there at the school on the 3rd saturday of every month since 12/84. then again, maybe it's time for a change.

'Tis a shame. overall the school was centrally located off of a state road and was a "known" spot so people asking for directions had a chance to find someone who would be able to get them there - and the room was next to the ham radio station so once folks had made it to the school, it was only a matter of finding the ham club's antenna.

I think TS-50Ss stll can be had for around $900 with CW filter installed. My only beef is that the key jack is way in the back. I really think the key should be in front, but that's me. Phone guys miss having VOX. Built-in computer control interface would be nice, and there is no direct keypad entry QSY without add-on stuff. Otherwise, a nice little rig... very compact, and VERY nice recieved audio if you use an outboard speaker. (The tiny onboard speaker is easily overdriven by the audio chain) All in all, most of the big rig basic features in a mobile size package and a fair price for a new rig. IF shift, 100 memories, dual VFO registers, split freq capability, RIT, scan. The supplied mic has 4 programmable function keys and up/down buttons for rapid QSY and the increment can be changed. The ouput power is only adjustable in 3 stages, 10, 50, and 100 watts, but the two lower settings can be reset with internal pots for QRP etc. RX audio is available at the mic jack making RTTY etc a bit more convenient. Don't overlook this rig. I won't pay more for any other currently available rig.

The Scout is about $400 cheaper with a single band module... you need a new module for each additional band so this little 50 watter is only a bargain if you want to do only one band. I think the modules are around $50 each. Still worth considering if you know you only want one band.

While it is considered bad Netiquette to post e-mail on Usenet without permission, it is unrealistic to expect proper behavior from unwashed goons like Timmy.

If what N2SAG was suggesting was illegal, K1MAN would have been brought up on charges years ago. Glenn even takes phone calls from listeners.

See for yourself:

http://www.carte.net/k1man/aara.htm

and from which I quote:

"The IARN Amateur Radio (call in) Talk Show format began in 1995 which included expansion to 90 minutes per program and double airings each evening between 8 and 11 P.M. Eastern local time and simulcast on 3.975 and 14.275 MHz. There is also an AM service on 3.890 MHz."

At any rate, a few references to the SWLs (which Timmy himself has brought to the frequency with his incessant spamming of rec.radio.shortwave) seems a mild offense indeed when compared with the endless jammer tapes, music, death threats, and obscenities from KK7HO, K5BLB, and their allies.

With good wishes to all,

Kevin, WB4AIO.

From: Andreas Christiansen <andreas.christiansen@fou.telenor.no>
Message-ID: <357E8B90.65E0@fou.telenor.no>
Source record: 170180

Thanks for the advices. I forgot to mention in my first post
that even if I am left-handed, I use my right hand for writing.
(The result of an oldfasioned schoolteacher in rural Western
Norway in the late 50's : Use your 'correct' hand when you
write. Luckily, this teacher never taught us CW !!)
So my plan has always been to operate the key-paddle with my
left hand, and take notes with my right.
I just wondered if there were a reason for having dots on the
thumb and dashes on the index-finger. Is the thumb more 'fine
tuned' for sending dots, or something like that.
Anyhow, you have given me good advice, and I will probably
leave the paddles as they are. That way I may use other
stations, and others may use my station.

Tnx and 73' de

You may be surprised to hear that the UK lacks the sort of written constitution that you're used to. It was probably one contributing factor that impelled certain people to emigrate, declare independence, and write one ;-)

Dunno who wrote this paragraph. I only know that this is some fine example of computer translation. Actually the re-translation by altavista turns out to be better English than the original German. If this were written by a German indeed, he most certainly would not have any chance to graduate from a regular school over here....

People have asked me "What does K5BLB's Hamshack look like? What's He use for his Tape playing?" Well I'm gonna Tell you.

1. He uses a 1,500 watt amp and a HF radio
2. He a cart machine and a tape rack full of music.
3. He seems to have a endless supply of noise making devices, one that say "#$#@ you" and a police siren.

4. He must a pc to generate the Tarzan Yells. I doubt he could do any thing else with.

5. A tape loop of "Them Faggots"
Coming soon,

What Sid does in his spare time.

Is that so? Your smug, self-satisfied (and racist) opinion carries little weight, considering that you don't even know how to spell "intelligence".

There is a large bluegrass festival held every year in Wellsboro, PA, not far from here. I personally know two doctors, an attorney, an accountant, several engineers and a commercial airline pilot who are devoted fans of bluegrass music, and who regularly attend said festival.

There are a lot of righties telling us to use our right hands to send with so we can write with our lefts. How many righties send with their lefts so they can write with their rights?

I don't send and write at the same time and it doesn't bother me to pick up a pen when done sending with my left. Being truly left handed it is much easier for me to send with my left. I could only imagine other truly left handed ops feel the same but I cannot and do not speak for them.

I guess you can train yourself to operate any way you wish. It seems to me that the natural inclination would be the most comfortable.

Andreas, you just mentioned that you write with your right so if you feel inclined to send and write at the same time it would only seem logical that you send with the left and write with your right...Just do what is comfortable for you...and it seems you have decided to do just that. :)

Burp if you took your head out of your ass long enough to look around you
might have noticed that Ronnie Milsap, Chet Adkins and a couple more
nationally known musicians are/were hams.

It must be a lonely enviroment you live in.

Support HR 2721.

k1oik@mindless.com wrote:

> Don't trip over each other all at once.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I could not think of anything witty to say here.
So I plagiarized Lee Taylor.

If ignorance is bliss,
anti-gunners should be the happiest people in the world.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

James V. the idiot Obrian III the v is for vomit, pig vomit. Here is another example of this loser hating everyone! Here I try to give this young ham operator ideals for antenna systems for his truck and pig vomit has got to get in here with all his hate and lies. Hey pig vomit how come you never have anything nice to say or any help for anyone? All you have is hate and lies! Are you into devil worship? Are you killing animals in the backyard for Satin? You act like one of those type of people. I bet you are. Has the dope and booze you abuse destroyed your brian beyond all hope? So your mad at the world cause you did time for dope, so your made at the world cause you got dishonably discharged from the Navy for dope, so your mad cause you married your mother, so your mad cause you are unskilled labor, you have to wreck a car to get any money, (I would bet if that was investagated that fraud would come into veiw did you lie to the insurance company? HMMM!) so you would never own anything in your loser little life, I understand that these are the things about yourself you don't like. I would bet you truly hate yourself and thus you hate everyone else. Well pig vomit you are not alone I hate you too. Most of the ham community hates you too. Why don't you do us all a favor and stick the gun that you arenot supposed to own in your mouth and pull the trigger. That way you can get some releif from your loser life. I promise, you will not feel a thing.

REPLY COMMENTS OF Jacob Brodsky,
Amateur Radio Station AB3A
1371 Woodbine Road,
Woodbine, MD, 21797

June 10, 1998

Introduction

These are the comments of Jacob Brodsky, a radio amateur with over 20
years of experience, a graduate of the Johns Hopkins University with a
degree in Electrical Engineering, a recreational experimenter with RF,
and a practicing electrical engineer of radio telemetry systems.

Overview

These comments will show why the efforts and concerns of this NPRM are
impractical, ineffective, cumbersome, and should be ignored.

Discussion

Judges, lawyers, and police frequently tell us that "ignorance is no
excuse for the law." I'm writing this response because ignorance of
science and technology is no excuse for bad laws, regulation, or
policy. It cuts both ways. Nobody will take this proposed regulation
seriously if our leaders keep making policy which looks as if it came
from the Flat Earth Society. With this NPRM the Commission is getting
dangerously close to that situation.

Anyone with experience in radio technology understands that there is no such thing as radio privacy (the guaranteed absence of third party listeners). However, there can be radio secrecy (listeners bound by law not to divulge what they hear). Around the world, radio privacy is understood to be technically impossible to enforce. One would have to place a private citizen under so much surveillance to prove a violation of radio privacy that it would violate his/her human rights. Radio secrecy, on the other hand, is commonly the law of most democratic countries.

This is nothing new. Ever since the age of spark radio, it has been understood that if one wanted to keep a radio conversation private, that one had to use encryption, secret codes, or a combination thereof. Nothing in today's technologies has changed this paradigm.

Unfortunately, few in Congress seem to understand the distinction between radio secrecy and radio privacy. The result has been a very dangerous muddle of legislation. I see no benefit to having the Commission perpetuate this ignorance and foolishness any farther than required by Congress.

The first problem with this regulation is the definition of what exactly constitutes a "scanner." The definition of "a receiver capable of switching between four or more frequencies between 30 MHz and 960 MHz and capable of stopping at and receiving a signal detected on a frequency" ignores the possibility of a radio with a computer control interface but no memories of its own. Further, the definition is vague as to exactly what "switching" and "frequencies" means. What if there were some kind of fine tuning knob on a receiver? How many "frequencies" does it cover? How many "switches" can it do?

Most receivers in this frequency range have the capability of being controlled by computer. It is not difficult for individuals or small companies to build computer controllers which restore full scanning capabilities to a plain receiver. I doubt the FCC has the authority to ban various uses of computer equipment. So I fail to see exactly what the FCC can do to prevent "scanners" without affecting receivers which are not by definition "scanning receivers."

Second, what exactly is test equipment? I have used scanners to find IMD sources, sniff out a local oscillator frequency (to see if it was working), and I have even used the scanner's local oscillator as a makeshift signal generator. Admittedly, most scanner users won't go this far. However, my point is that a scanner can be a valuable piece of test equipment on my test bench. Were the scanner to include a calibrated signal strength display, it could easily be called a "selective level meter" or even a "poor-man's spectrum analyzer" when used with a computer.

So what features or performance specifications should one use to distinguish between test equipment and a consumer radio? The distinction is actually quite vague. This is especially the case because scanners are usually purchased by people who already have some

technical background. After all, it takes knowledge of the radio spectrum to know what numbers to punch in to a scanner.

Third, what kind of controls could one place on people who purchase unblocked receivers? Shouldn't a purchasing manager from a large company be able to buy one, even though s/he is not a licensed radio technician? What if the technician whose license might be used to purchase such equipment leaves the job? Where should the responsibility for the use of that equipment go to?

At the other end of the business spectrum, what about individuals like me? What if some day I were to start an RF engineering business from my shop at home. How would I, with an Engineering degree and my ham radio license, purchase unblocked test equipment? What basis could the FCC use to determine who can purchase such equipment and who can't?

I simply can't imagine criteria for the sale of unblocked receivers which could filter out trouble makers without affecting legitimate users. I don't think there is an equitable, non-intrusive solution.

Fourth, prevention of scanner modification is not easily defined. What exactly constitutes "readily being modified?" Keep in mind that many scanner enthusiasts are technically inclined.

The situation as it stands today is not all that bad. Once the cellular band blocking is "burned" in to a processor chip, so that modification is not possible without unsoldering and replacing the chip, most folks will give up on that approach. Instead, they'll seek other means.

Regulating kits is not the way to stop this behavior. It isn't hard for someone to sell downconverter kits intended for amateur use which could be easily modified for Cellular Telephone interception. Not only that, some kits can be pieced together to build a cellular receiver, despite their legitimate uses.

For example, there's nothing wrong with purchasing an R2 direct conversion receiver kit (a receiver capable of receiving many modulation modes, given the appropriate local oscillator and peripheral support) from Kanga US. And there's nothing wrong with building it for service at 45 MHz so that one can hook it up to a UHF TV tuner. Put them together, and what do you have?

The funny thing is that building kits is the hard way to receive cellular. Anyone who understands what a down-converter is knows that a common cable TV tuning box attached to the scanner will make scanning the cell phone bands a breeze. Just hook the cable side of the cable TV tuning box to an antenna and hook the TV side of the box to the scanner. Set the scanner to tune around TV channel 3 or channel 4, and...

The good news is this is not the problem it is made out to be. But for a very few high profile interception cases (the incident involving Speaker of the House, Newt Gingrich comes to mind), divulgence of intercepted transmissions is not a frequent occurrence.

Fifth, while it is true that there are test modes on some Cellular Telephones which can be used to listen in to conversations, very few individuals are likely to bother with the hassle of using these modes to listen in. It is cumbersome, after all, and there are far easier ways of listening to the cellular phone band. Besides, these self test modes do serve a purpose for manufacturing and maintenance personnel. And once again, what criteria could the FCC mandate to allow for testing, while at the same time prevent unauthorized use? It would not be wise for the Commission to get in to this kind of rule making.

Sixth, the interface to and from a radio (for the use with digital signal reception) should also be left alone. After all, with ham radio operators starting to use public domain paging protocols, and APRS packet standards over OSCAR satellite links, there are ample reasons why someone would want direct demodulator access to a scanning receiver. Is the FCC interested in regulating these features too?

The only thing in this proposal which might make sense is the image rejection standard. If Uniden wants to propose new image rejection standards of at least 38 dB for part 15, (as described in paragraph 6) I see very little wrong with that.

The Commission is going overboard in paragraph 7, however, by proposing that the whole radio be exposed to a certain field strength to verify total performance. Proper verification of this would require access to an Anechoic Chamber (to keep the test from radiating in to the outside world, if nothing else), whereas the proposal in paragraph 6 requires nothing more than the service monitor which would be used for alignment anyway.

If there are additional cellular telephone signals available to the scanner because of poor shielding, it probably won't be enough to warrant additional certification testing.

I believe regulations to pot the interior of a scanner to prevent modification is overkill. I've already pointed out that casual mischief makers are usually stopped cold by scanners which don't have mode configuration external to the microprocessor (such as a ROM chip, a diode, or a jumper). Keep in mind that simple and effective alternatives exist to modifying a scanner.

Besides, potting the scanner is not as cheap as it looks. Once an aligned board is potted, it often detunes. There could be a substantial quality control problem facing those who attempt this sort of measure.

I can't help getting the impression from the Commission as well as Congress that it isn't really scanners they're scared of. It's the

users. To paraphrase that overused clichï¿½, "Scanners don't disclose cellular telephone calls, people do." If there's a will, those with even a meager technical background can work around these ill-advised regulations. The Commission would do well to focus efforts toward prosecuting those offenders, such as the McDermott's (the couple who intercepted Newt Gingrich's conversation over a cellular telephone), who disclose what they hear.

Conclusion

It's a proven fact of human nature that as soon as someone says "don't look at that naked lady riding her horse down the street" most people will turn and look. So what were our esteemed friends, the CTIA, thinking when they got Congress to legislate the cellular telephone bands as a "don't look" band? It was a foolish idea then, and it looks even worse now, particularly in the light of this NPRM.

I see many problems going forward with this line of regulation. As with many other kinds of radio equipment, scanners are a tool. Tools can be used for both good and evil. We don't legislate the manufacture of binoculars just because they might be used by Peeping Toms. Why should scanners be any different?

I don't think it wise for the FCC to attempt regulating what an individual's computer should and shouldn't be able to do with a radio. With commonly available alternatives and loopholes, I don't think the FCC will be particularly effective at regulating kits for down-conversion, or at telling cellular phone manufacturers what service modes they should or should not put in their phones. I doubt it would be an effective use of Commission resources to attempt setting minimum performance or construction standards for manufacturers. Once the Commission gets in to the business of regulating consumer receiver performance, I predict tremendous delays while the already understaffed FCC attempts to certify each and every change to a manufacturer's design. The probable delay on the part of the FCC outweighs any benefit to the public.

Frankly, though I dislike it, I can live with the status quo. However, I see no point in regulating how many nails to use for securing window shutters so that Lady Godiva can ride nude down a public street. Always remember, the story of Lady Godiva is legend precisely because no-one looked! Don't expect this every day from the general public, or you will be disappointed.

Sincerely,

/* signed */

Jacob Brodsky,
Amateur Radio Station AB3A

Jacob,
You mean to tell me that a person has to go though this kind of crap to get a idea accross to the FCC. No wonder we have money problems in government. I would like to be the one that sells them paper. What if you don't own a computer does that mean you can't send a formal reply? No computer no disk see what I'm saying. So our government (FCC) has gotton to be so big that the average man can't reply to them? I do belive that if this type of government continues, it will not last in this contry to much longer. Jacob this is just awful. I will comend you on taking the time letting us in the Amateur community know how to submit such a paper. It looks like it to me the average man does not stand a chance. I mean one has to be a lawyer just to express his or her opinion to the FCC. That is pretty darn bad knowing what a lawyer charges an hour.
I know this has nothing to do with the FCC but it does follow the same lines. I have noticed the press has been really putting a high profile on guns and schools. This has always been a problem, kids, guns, and gangs. Look at the Newyork street gangs of the 50's and the mob gangs of the 20's this has been a major part of Americain soical life. Welcome to the U.S.A. I like to say. I know that this has noting to do with what you are saying but in a around about way it does. Here is what I'm trying to say. The government has gotton to be so big that the average guy can't express a formal reply with out getting a lawyer. They have gotton to be so big that they can't see the forest beyond the trees. Government is so big and so out of controll they can't controll it themseleves. They are to busy worrying who got oarl sex and they are mad cause they didn't get any. (another story sorry). So when its out of controll they try to do everything in there power to take our guns away. So what do they do they put a very high profile on kids and guns. Thus changing public opinion on guns then disarming us then they will work on doing away with our other rights. Free speech free press (censorship on the internet now. People VS. Larry Flint in the 80's tested this right). So I do belive that if the democrats get into power another four years this is what is going to happen. I am not a republicain nor a democrat but to save this great nation of ours we need to put more independance in the house of rep. and a republicain in the white house. I mean they are already attacking personnel freedoms (Smoking) and a guy can't trade in the econemy with out a ton of paper work(own his own busisness). I don't smoke but the more they say Americans you can't do this the more they will. Its just the way Americans are.
Thankyou for shareing this with us As far as the law about 800MHz well I belive that once its on the air its public property. How in the heck are they going to enforce this can of worms. They can't get a grip

on CB radio, Amateur radio. I just think that its just more waste. Why don't they tell us what we can do instead of what we can't. It would take up less paper.

A superb comment! Nice going! I wish you had
included one other point..... that even as we
legislate cellular-capable scanners to oblivion,
the cellular services are moving to CDMA and
other digital technologies that simply cannot
be detected/decoded by analog receivers.

In other words, the entire matter of radio privacy
is headed toward mootness. The issue will take
care of itself in due time.

Any possibility you can add that argument to your
comment?

Hi,

I just bought a second handed scanner the ICOM IC-R100.
It's a great scanner allthough i'm missing the manual.
I need some help to scan a certain frequency, does somebody know how this scanner has to be programmed for running between 2 freguenties.
for example between 30.000 and 40.000. Any help is appreciated.
please mail me to yvonowee@hotmail.com or reply in NG

p.s. if someone has the manual in a txt file or doc it would be terrific when you send me a copy

best regards, Yvonne

John,

If you would care to mention the fact that I have not frequented 3950 since the time you mentioned and also the fact that at that time you were a friend of the same named wa9kji then I could take your comments seriously. I also note that I am the one that is seeking peace, not you. I view this attempt as a last ditch effort to end this idiotic war. People like you have no interest in peace. You cant have fun in peacetime. Good luck John

Andreas, A friend of mine is left handed and he preferes to wire his with the dits on the left and the dahs on the right. However he can also use it the other way. Since he used to be able to send with either left/right hand. Since he had his stroke he uses the left hand only and does well. Good luck. Dan/W4NTI

If these items are so useless as you claim, then how do they allow me to
operate on HF with high power on any band and NOT CLOBBER MY TELEPHONES OR MY
COMPUTER?? Oh and by the way super tech....if you use two pieces of ferit in

series with a pair of telephone wires....how much continuity will it show?
DUU

Would you believe two caps and TWO INDUCTORS ?? Oh BTW Jimmy...ever heard of a trap??? A resonate circuit?? bypass?? Hell, lets keep it simple...ever hear of a RFI filter?

Source record: 170211

I've said it once and I will say it again: please do not post off-topic
messages in this newsgroup. Next time, AOL will know about it.

The reason it is off-topic? Amateur radio does not permit ANY form of
encryption or inversion. Only signals allowed are control signals for model
craft.

CTPDS49 wrote:

I think I will purchase the Radio Shack HTX-202. Doesn't look great, but

works great.

I've got two questions:
1: Should I get it? If not, what very similar radio for less than $120
might/should I buy?
2: Is there some place I can get either this or a very similar radio for

less than $120?

NOTE: I will ONLY buy from a reputable [online] store. Not directly from
a person.

Thanks!

4466. This Newsgroup sucks!

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-10 00:00:00 UTC
From: Peter Lemken <Plemken@mail.blinx.de>
Message-ID: <6ln5vp$8nk$1@fu-berlin.de>
Source record: 170215

Folks,

I have watched this newsgroup for a long time (more than 4 years) and sometimes replied to articles that I found worthwile replying to.

By now this group has deteriorated to a cesspool of name calling, anonymous threats, foul language, etc, you get the drift.

What amazes me most is the fact that every participant seems to be needed to take a position that conforms with one poster's opinion and thus makes himself a hateperson in himself, thus drawing additional namecalling and foul language either via postings or personal e-mails.

I have been a ham for almost twenty years now, loved and still love the hobby and I can assure you that I have had my share of different opinions with various hams ever since I got my ticket.

Being here, I have seen that once you take _any_ position, be it pro code, anti VHF, pro Pactor, anti Amtor or whatever, one gets responses that would be considered not only offensive but more or less aggressively threatening in real life. Why is that so, I wonder? We all should be in agreement over the fact that ham radio is a wonderful hobby in all its facettes, regardless of whether you are a tech plus or a General or an Extra, or whether you love or detest CW or believe in verticals and not in Yagis. During my 20 years of activity I had my share of VHF DXing including Moonbounce and MS, HF Dxing in CW and SSB. I worked PACTOR, AMTOR, RTTY and still use Packet Radio and I still have a deep respect for those hams who have the technical mind and develop new technologies and fervently propagate them to further the activities on the ham bands.

However, I have no respect whatsoever for people who claim the possession of ultimate wisdom. Neither do I respect name calling and veil threats to fellow hams on the newsgroups. My respect is also nonexistent when it comes to racial bigotry, self-appointed "I-know-it-all"s and to hams who put a lot of energy into telling us why ham radio is a hobby that should be abolished.

Why am I writing all this? The reason is is simple. I have pointed out to one poster to the newsgroup that the contents of his posting is incorrect and proved this fact to him. His reply made me feel like a jerk who either is incorrect himself and better join his religion or just (/&(/& off and join "the other sider". I don't want to do that. I want to discuss various aspects of ham radio on this newsgroup; no more and no less.

It would help the current state of ham radio a lot, if all of you guys concerned would turn on your rig a littler more, get on the air and talk to other hams in a way that is a little more civilized than the output of

your keyboard into this newsgroup.

And one day, maybe, some guys could even learn to take political views out of ham radio. Is common sense something that one political party has a firm claim on?

I am a left-hander, though I do some things with my right hand, like throw a ball. I am just startting to learn code, and sending code, in the past two weeks. I am using paddles, and I found that what felt natural for me was to use my right hand. I also set the paddles up to send dahs with the left/thumb paddle, and dihs with the right/forefinger paddle. I hope I am not breaking some hallowed tradition, but that is what feels best, and I don't expect I'll be using others' stations much until such time as I am can copy and send >15 WPM at my own. One question though, what is the orientation on 'bugs'? Which side makes which element? I know I will get a bug one of these days, hey even if I never actually used CW on the air I would have to have one of those neat-o gizmos.

The TenTec Scout 555 can be had new for less than 600. You have to add band modules at 29 a piece, so if you get all band 160-10 that puts you in the range of the low end Japanese radios. Band switching can be a pain with the Scout, but I think the receiver is better, much better, than many of the higher priced imports. With those caveats, the TT is a good way to get into HF cheaply, with TenTec's outstanding customer service (they have sent me small parts for FREE, on an out of warranty rig that I broke myself) and high resale value. See it at http://www.tentec.com

LAST US ASTRONAUT ON MIR DEPARTS

US astronaut Andy Thomas, KD5CHF--the last US astronaut scheduled to serve aboard the Russian Mir space station--departed Mir after a four-month tour. Thomas will return to Earth aboard the shuttle Discovery, which fled Mir June 8. The Discovery's commander for this mission is Charles Precourt, KC5YSQ. Also aboard is Mission Specialist Wendy Lawrence, KC5KII, making this the first ARRL-sponsored hamfest in orbit. News reports say that Thomas had his rigs packed and was so eager to get back to Earth after four months of talking to only hams that he had already moved aboard the shuttle. Discovery returns to Earth June 12 at which time Thomas will personally tour the FCC to be sure this doesn't happen to future astronauts who bitch that their escape suit is too tight.

American astronauts have spent nearly 1000 days in space talking to hams over the past three years as part of a bet lost to Russian cosmonauts. Thomas' departure comes as the Mir experienced renewed problems with tube based Russian crap .

Anyone have the WHOLE story regarding this K3CQR, Bill??
I heard that for many months he would say filthy things
on 20 meters without benefit of a callsign until one day
he was caught. Was he fined? What action was taken
against him?

Jeez! I've heard all kinds of attacks on KV4FZ. But
here's a guy who is an actual radio criminal! Why is
he being treated with kid gloves? (Even by the "Stump
Jumpers"!)

Time to go on the offense with this kind of stuff, Stump

4472. We need some dirt on Doc!

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-10 00:00:00 UTC
From: Crimson-and-Clover@feedME
Message-ID: <357dd858.0@lightning.ica.net>
Source record: 170253
Cross-posted to: rec.radio.amateur.misc,alt.feedme

Doc, AF2Y, is one of the most vile amateur radio
operators alive today. But he thinks....and many
people act like....he's as clean as the wind driven
snow.

Doc and his cult followers have been digging up mud
on other hams who occupy 20 meters. I say it's
time to dig up some dirt on Doc!

Surely there must be something criminal Doc has done!
What about former patients? Not everyone could have
come out of his dentist office fully satisfied!
There must have been a malpractice case or two!

Come on folks! Don't be afraid of those wussies at
the ADL! Hell....they are so stupid they call other
Orthadox Jews "anti-semitic"!!

4473. Looking for Ham in Dry Ridge / Sadesville KY

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-10 00:00:00 UTC
From: Mark Tanner <mtanner@cinergy.com>
Message-ID: <01bd940b$0eba8da0$1108a8c0@Tanner.CINERGY.COM>
Source record: 170254

I would like to install a 1/4 kw Micor UHF or 2 meter 100w micor in one of these two locations. Looking for someone who would like a free repeater.. Catch is that you have to take care of it, and we need to find a site where to put it. I have antenna, feedling, etc...

If you are interested, please e-mail.. Thanks in advance.

KC4COV

mtanner@cinergy.com

Boy Orifice is really a moron. Check this out:

Tuesday, June 09, 1998 08:56:49PM

Finger ye464@199.60.222.3

Login name: ye464 (messages off) In real life: Jamie O'Brien
Directory: /opt/csuite/home/64/ye464 Shell: /opt/csuite/bin/shell
On since Jun 9 17:32:30 on pts/40 from ts1.freenet.victoria.bc.ca
Mail last read Tue Jun 9 17:32:46 1998
No Plan.

Originating IP for above was 199.60.222.3 Which comes back to Freenet. I spotted this account recently created for "Jamie O'Brien". Is it KD4CDB? Nope! Originating IP that created this account comes back as:

usr26-dialup7.mix2.atlanta.mci.net

who is little Orifice.Check it out and trace it yourself. Now everyone should understand why these moronic qrm'ers are so despised on HF. 73 Let me see if I can get one of these idiots making a threat,it could be another

warrant to add to the pile....

4479. Code Waiver? Huh?

Looking for inexpensive memory keyer and set of Iambic paddles. Keyer need only have 100 character memory and physical condition not important as long as it works good. Also looking for inexpensive set of iambic paddles, old Hamkey or beat up Bencher would be fine, again physical appearance not important as long as they work ok. Please email me with what you have and your asking price.

Please do not equate BF (Butt Fu**er) with Amateur Radio in any fashion. He is not an Amateur Operator of any kind. He is simply a brain damaged fool trying to hold himself together. I have asked that he see a doctor many times, but he continues to let his medication run out. Oh, well, we all have to bear the cross, but the load is easier as we walk together.

4491. Titanic Marconi installation

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-11 00:00:00 UTC
From: Joe Knapp <jmk@worldnet.att.net>
Message-ID: <6lq2si$o81@bgtnsc02.worldnet.att.net>

I wonder if anyone can help decipher the diagram of the Marconi set used on the Titanic, shown on the following web page:

http://www.geocities.com/~ss245/titanic/marconi.htm

Some references say that a 10" simple spark coil was used, but it's apparent from the diagram that this was the emergency, battery-backup system. There is an more modern (for the day) alternator-type main system, but I can't follow it too well. If anyone can give details it would be appreciated.

Joe

"Glenn J. Torres" <radioman@communique.net> writes:
>I am looking for opinions, pro or con on Samlex Switching Power
>Supplies.

I don't have any experience with the switching ones, but I've owned 3
of their linear supplies of various output power. On all of them
there was inadequate thermal grease between the power transistors
and the heat sink. On all of them, the power transistor cases
are connected to the positive side of the unregulated supply, which
could cause some nice sparks if the transistor cases ever touch
something connected to the supply negative terminal. None of them
seem to have enough heat sink area to supply rated output continuously
while keeping transistor temperatures reasonable without fan cooling.

And on the 15-20 amp version, there are four 2N3055's connected in
parallel as the output pass transistor, with no emitter resistors.
Thus, the transitors don't share the current equally 4 ways.

I ended up fixing up all of them - adding heat sink compound and
a plastic cover over the transistor(s) on all of the supplies,
and adding emitter resistors to the high-current supply. After
these changes, all of the supplies have worked fine.

So, I'm not impressed with the quality of design or assembly of the
Samlex linears. But, with a little cleanup, they seem to make decent
simple supplies that cost a lot less than any alternatives I've seen
around here.

If I bought one of the switchers, I'd probably take it apart and look
for similar problem spots. On the other hand, the Astron switchers
aren't much more expensive than the Samlex switchers here, and the
Astrons do seem to be better made. In addition, the Astrons have
overvoltage and overcurrent protection - the Samlex ones don't as
far as I can see. So it may be worth looking at the Astrons too.

Curtis said:

That is the only thing you have ever posted that I agree with.

Back up a bit though, how about Rodney King .. the Policemen were found not guilty .. the Judge said Rodney contributed to it .. he came out of his car with his fists doubled up and in a boxing stance. Then here come the Feds with civil rights and sent the Policemen to Federal Pen.

Liked you say, slap on the wrist for those who nearly beat Reginald Denny to death .. no civil rights for Reginald.

Now the Feds are looking to see if they can charge those in Jasper with civil rights .. Saw on the News that the Feds are researching to see if the Feds ever paid any money for construction of the road where it happened so as to make it a Federal crime.

Are the Feds saying that you only have civil rights in cases where the Feds were involved somehow .. ????

It would seem to me by that line of reasoning if I don't have civil rights if I am not on Federal property then I should not be subjected to Fed law when not on Fed property.

Well, the other HT IMVHO is an unlicensed station. There is no control operator. The licensed ham has no way to "pull the plug" on the unlicensed operator. I would say that this is not legal. CB or FRS would be more appropriate for this use, and nearly as effective.

If the rig draws 1.6A, then a battery with a storage of 600mAh will sustain that current for around 22 minutes, assuming the entire energy of the battery can be extracted at that current rate and that the voltage remains high enough to power the set suring the discharge. But that's not a good assumption.

The missing bit to work it out by power is the voltage of the battery. But let's assume it's a 12v battery, because I guess this is an HT and the HT's I know need 12v to put out 5w. Also let's assume that the rig is 50% efficient. The PA will be more so, but there are other circuits and perhaps lamps to consider. So the rig will require 10w and the battery will have (.6*12) 7.2 WattHours of energy. So by this measure, you'll get 43 minutes of transmit, again only if you can extract all the battery energy at that power level.

So now we have a couple of half-arsed guess numbers which are within an order of magnitude of each other, which is a bloody miracle :-)

I'd say you should be looking at around ten to fifteen minutes if the rig doesn't catch fire or start to burn your hand and make you let go of the transmit button first.

4507. CMOS Super Keyer III problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-11 00:00:00 UTC
From: artky1k@northlandlink.com
Message-ID: <357fedaf.329912@news.tds.net>
Source record: 170082

Hi Everyone,

I've recommended the CMOS Super Keyer III to many of you, and more than a
few of you has built it and use it daily. I love mine, there is nothing
else that even comes close to it!

I wanted to move mine to a smaller enclosure and increase the portability
after having found a source of SSSMMMAAAALLLLL 50 k pots and a piezo buzzer
that is less than .5 inch diameter and 3/8 inch deep.

I built the unit in a small box and will mount that box on my bencher
paddle after relocating the post that holds the return spring.

By using these small components, and some sub mini pushbutton switches, I
have reduced the current drawn from 40 ma to 8 ma and the entire assy
(except batteries) fits in a box that is 1.75" by 2.625" by 3/4".

The problem came when attempting to use the piezo buzzer however! The chip
is set up to drive a speaker with 500 to 990 hz user selectable square
waves. This makes a wonderfully nice sounding monitor, but small speakers
are not available.

If the user is willing to settle for a 3.3 hz fixed tone, the piezo buzzers
provide more than room filling volume (much louder than the speaker was),
and they draw 8 times less current than the speaker. The piezo buzzer is
the key to making the circuit small and portable--using the piezo buzzer
instead of the speaker even allows smaller batteries to be used because the
peak current drawn is much less!

I've operated cw exclusively for the past 26 years, and I've never been
hindered by the fact that the monitor sidetone was not 700 hz! My original
CMOS Super Keyer used a piezo buzzer @ 2.9 khz. While a 700 hz tone

might
be nice, it should be an option for those who elect to use a speaker,
NOT
MANDATORY. I'd rather have the OPTION for a piezo buzzer.

There are at least 10 available IO ports on the motorola chip used in
the
super keyer III, but none of them has a logic output suitable for
driving
the piezo buzzer!

I called one of the authors of the firmware for the super keyer III
and he
confirmed that an output suitable for driving a piezo buzzer is not
available. There is no firmware command for converting the existing
speaker
output to a piezo buzzer capable output either!

Needless to say, a 3.3 khz buzzer driven by a 700 hz square wave
SOUNDS
LIKE (expletive deleted).

A one shot monostable vibrator could be added to lengthen out the 700
hz
pulses, or an rc circuit could be used. I find it very disturbing that
such
a fine keyer is lacking this option!

The author of the firmware was very nice and I demonstrated the piezo
buzzer over the phone. But, he advised that he doesn't own the
software and
that he was only paid to write it and that he has no other interest in
the
project. He is unable to modify the software and provide an updated
chip, I
even offered to PAY him to do this for me. He also advised me that
Idiom
Press is owned by a businessman (non-ham?), and that an appeal to them
would be unsuccessful. Ever notice that ads for the Super Keyer DO NOT
list
a phone number for Idiom Press?

Does anyone have any suggestions regarding this problem?

Personally, I'd like to see a surface mount version with more
features. The
piezo buzzer and the volume control would be pc board mounted! Both
chips
used in the super keyer III are available in smt packages and the
entire
circuit (including pot, piezo buzzer and memory channel switches could
easily fit on a 1.5 inch by 2 inch pcb)!

Does anyone have any pull with Idiom Press?

GL

Hey Peter,
Well guess what you are right! After reading what you posted I thought that I would post something that is OLD but the truth. I bet old Peter Segal is rolling over in his grave.

The Amateur's
Code

The Radio Amateur is:

Considerate... Never knowingly operates in such a way as to lessen the pleasure of others

Loyal...Offers loyalty, encouragement and support to other amatuers, local clubs, through which Amateur radio in the United States is represented nationally and internationally.

Progressive... With the knowledge abreast of science, a well built and efficient station and operation above reproach.

Friendly... Slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance, cooperation and consideration for the interests of others. These are the hallmarks of the Amateur spirt.

Balanced... Radio is a avocation, never interfering with the duties owed to family, job, school, or community.

Patriotic...Station and skill always ready for service to country and community.

--The original Amateur's Code was written by Paul M. Segal, W9EEA in 1928.--

Hello All;
I just purchased this keyboard new but I can not use it because I have no Comports available. The keyboard goes into a standard 5 pin keyboard slot and the touchpad connects to Com 1 or 2 [I do not Have] New is sells for $89.95+shipping. Still has the 3 year warranty included. Asking $45+shipping Email: n2rif@amsat.org Phone is usually busy but can try 609-386-9382 from 10am to 10pm daily.
Thank you for reading my sale bulletin..de Thomas J -73

Here are the specifications:
NEW - Nimble Multipurpose Win '95 Digital Touch Keyboard
Keyboard Features:
Designed for Microsoft Windows 95 / 3.1 Esc, Tab, Bksp, Ctrl, Alt & Windows 95 keys for easy access Soft-caps of hard-caps are all double-injection keycaps Patented design key switch for bounce, stable switch-travel and a soft, sensitive touch to reduce the strain of typing. Concave design palm-hand rest helps both hands and wrists feel more comfortable Key switch lifecycle bears 30,000,000 times 3 clustered LED N C S Lock

Digital Touch-Pad Features:
Can be used as an input device between relative or absolute coordination mouse mode under any software application. Can switch between relative or absolute coordination mouse mode by using soft-switch under Windows 3.1 or Win95. ITO transparent touch panel with long life for up to 5 million uses. Wireless input pen without switch to avoid restraint by a cable.(Any pen or finger can be used as an input pen.) Touch pressure is only 5-10g for easy writing and moving. High resolution: 1024 x 1024.Transmission speed: 9,600 baud rate. Provides double-click and drag functions.Working area: 52x40mm (small enough to be used in the palm of your hand) Comes with "Quick Point Signature" that can put your signature on any document for all Windows applications.

Whether or not the FCC is concerned or not is besides the point. The licensed ham should be concerned with following the rules. This is supposed to be a largely self-regulated hobby, not an excercise in rule-breaking and seeing how far we can stretch part 97 and still get away with it.

Dear "Dr",

I strongly advise you not to travel to the Northwest. Your nose is so far into the air, that you would drown in short order. I also imagine that Dr. Dan Crary may take exception to your Bluegrass slurs. If you have no appreciation for music from real people, I suggest that you find another forum.

600 mAh divided by 1.6 A = 0.375 hours, or 22.5 minutes. That is key down. 100%
duty cycle, so figure about 35 minutes. Be aware that this is a very simplistic
view of the problem and your mileage WILL vary. Such a small battery might not
be able to sustain such a high current continuously. Toward the end of the
discharge, battery voltage and power do funny things and do not behave in a
linear fashion like in the formula.

Hi Ryan

Radio shack products get alot of flame from some hams just because
they are Radio Shack. I have always thought this was a bit of curious
snobbery on the part of the ham community, and have found most of
their products to be good solid equipment for a resonable price. I
have been a ham for seven years, and started out with a HTX-202 that
still works quite well. I have never talked to a ham that owned a 202
that didn't feel it was rugged and well designed. One of the beautiful
things about the design is the control interface. It is probably the
most easily used HT around, and the commands make sense. I wish the
same could be said for my wife's Kenwood TH-28 A, a much more
expensive, and IMHO inferior radio. The battery pack went on my 202
because I recharged the life out of it. Other than that, It has taken
unprecedented abuse with only a bit of paint coming off the back to

tell the story. Programming it is a breeze, and it has probably the most industrial heat sink on any HT around. You won't overheat the radio into shutting down. Other HT's have this problem (including my wife's kenwood). I recommend it highly. And anyone that makes fun of your choice in HT's simply because of the maker can go soak their head. :-)

cheers, and 73's

4516. Re: License renewal???

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-11 00:00:00 UTC
From: wb5agz@dc.cis.okstate.edu
Message-ID: <6lp6ob$315$1@sunhub-tulsa.onenet.net>
Source record: 170091

I just renewed my license electronically using the Form 900 which
is available on line at http://www.fcc.gov . I had my new license in hand
in about a week and I didn't have to so much as lick a stamp.

If you want to do it this way,you should follow the links to the
form 900. It asks for your call sign which makes your name and address
pop up when you enter your call.

The form is for renewing several commercial as well as amateur
licenses so you will see lots of excess boxes that don't apply, but most of
it is quite ordinary and only should take a few minutes to fill out.

I took a little longer because my browser which is "lynx" was having
some major trouble refreshing the screen correctly while I filled in the
boxes so I had to be very careful to be sure that I was filling in the right
things.

I am one of the unknown number of hams who is also blind and it
was really nice to be able to just sit down and do my own license renewal.
This is what computers should do, allow people to do things that were not
practical to do before.

I talked with the technical person at the FCC who developed that
page and he, along with everyone else I talked with was quite nice to deal
with. The potential problem is that, according to the person I spoke with,
plans are to go to a universal form system which will make use of JAVA
applets and lots of graphics so that applicants dealing with commercial
sites can send in engineering specifications, etc.

I certainly understand what they are trying to do and why they
want to do it, but it sure turns the simple stuff in to a major technological
endeavor.

I doubt that anything will come of this, but I suggested to the
technical contact that simple, routine things like renewing a license or
any other purely text-based thing could just as easily be done via email robot.
You get the file you need, modify it in the way you need, and then send it
back by return email and the robot either bounces it back to you because you
fouled up or tells you that your task is being processed, just like
listservs have been doing for years.

As a tax-payer, I am glad to see things being tried that should
speed up service and cut costs. I just hope that the widest possible
scope of the population can use these new services otherwise, we've got the
same old problems we have always had except that they just take on a
different appearance.

For those who may be wondering, lynx is a text-based web browser which was originally designed to allow people on a UNIX system who might have old vtXX terminals or slow modem lines to skip all the graphics and read the text of a web site. It is not designed for users who are blind, but like all well-designed UNIX software, it works correctly. We just connect a P.C. to the UNIX system and equip the P.C. with the voice or Braille output device. The UNIX system doesn't know that anything extraordinary is going on. It just sees a VT100 or similar terminal logged in via serial line or Ethernet and that's good enough.

The Yaesu FT-1000 MP has two VFO's, EDSP, built-in antenna tuner and power supply....Lots of goodies.. Lots of money!! (around $2700)

Beware...I bought one, and returned it !!

This radio has a VERY fussy antenna tuner.......I can tune a Kenwood 440, or an ICOM 701 with no problem on 40, 30 and 15 meters with my 40 meter dipole, center fed, with a 1:1 balun.. Rg-8X coax......

The YAESU FT-1000 absolutely went nuts with this antenna.. I even returned it to Yaesu to be checked, and they said it was O.K..??
(But I must have a very good antenna with 3:1 or less SWR.)

This is the only radio that does not like my antenna, so why does the Kenwood and Icom have no problem, and I work the world..??

No thanks YAESU... The FT-1000 is not for me...Buyers beware...

4521. Trunk your repeaters!

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-11 00:00:00 UTC
From: David Gillam <d_gillam@mailexcite.com>
Message-ID: <01bd9572$df7f1560$09b74ba2@bdc>
Source record: 170096

Looking for a trunking alternative that is cost effective and requires absolutely no modification to your existing repeater controller?

Want to be able to load far more people on your repeaters without over crowding?

Want to offer your users the ultimate in privacy?

Want to control every radio that is on your system? Disable/Enable radios.

Want to drive from one state or province to another and always have an active repeater automatically follow you without having to "flick" channels?

If you answered "yes" to any of the above, then you should look at CTS.

CTS, or Conventional Trunking System, is a small module that installs in today's more common amateur and commercial rigs. This unit interfaces with your radios I/O lines to control channel changes, system ring, out of range tones, aquired tones, and much more. Best of all, you do not have to modify your existing repeater controller. The only requirement is that your controller uses DCS and/or CTCSS. CTS has become popular with many commercial repeater owners in Southern and Central Ontario, such as ADDCOM Radio and ERPIN Communications.

Take a look at this testimonials:

"We always wanted to load our three repeaters more efficiently, yet it seemed that much of the activity was occuring on one system all the time, even though the other two had the same coverage. Installing the CTS module effectively loaded all the systems in a much more efficient manner, similar to that of trunking, and my complaints about the system being busy has virtually been eliminated. The remote disable was especially nice, since theft has always been a concern with my rental units. Now I can instantly disable the offending radio, or turn on the beacon to help home-in on it. I think that one of the best things about the CTS module is that it can be gradually implemented over time; conventional, unmodified units can still communicate with CTS-equipped units. This is especially important when it comes to budget considerations. To date, I have loaded almost 3 times the amount of people on my systems in comparison to what I would normally load them with, and it works like a dream, making me more money with airtime and keeping my subscribers happy!"

Dean Gardner, Addcom Radio.

Installation is a breeze and usually takes about 15 minutes.

To find out more about CTS, email dufferin@netcom.ca or call 1-519-587-0020.

We think you'll be impressed with our service and prices!

David, in my experience I've found the 100 watts my HF rig provides is more than enough, now that I have a decent antenna, and a decent antenna is the critical factor in a station's success. Using lots of power to make up for a poor antenna is a no-win situation: the neighbors lose with all the RFI from high power; you can't hear the other station very well even though they *might* hear you better (making you an "alligator"--big mouth and small ears); and you and your family and your neighbors get exposed to high levels of RF in the near field.
I find that 5 watts is usually enough to make contacts, especially when using CW which is around 13 dB more effective than SSB; lots of times 100 milliwatts is enough; seldom do I have to use 100 watts. Trying to use brute force to make a marginal path work is certainly one possible approach to hamming, but there's another, more elegant approach which is to go with the whims of the Propagation Gods and enter the paths when they open up wide for us--it doesn't take much power to walk an open path all the way to its end. 73 and 72 de Bill KB8USZ

4523. ARRL Employees Underworked ? Bored ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-11 00:00:00 UTC
From: TheTechTeacher@my-dejanews.com
Message-ID: <6lph0j$gi0$1@nnrp1.dejanews.com>
Source record: 170098

Dear Gentlemen,

Apparently my support for the ARRL was not enough for Mr. Bloom, who took it upon himself to erroneously correct my use of "fiduciary". Do not correct me dear sir, for you are mistaken. That we could all be so perfect as the quasi-yuppies at ARRL "Headquarters". There are more typos per square inch in ARRL publications than in a kindergarten classroom. Perfect yourself, then you can use your spare time when the Funmobile is out of town to show your inadequate command One may in fact be a "fiduciary", i.e. beneficary, or have the interests of a fiduciary, i.e. "fiduciary interests".

Now then, let's turn to the use of the words "ARRL staffers", over and over and over again ad infinitum.

Gentlemen, I believe Mr. Bloom took offense to my assertions that if the ARRL employees weren't fiddling with the internet, their work might be more efficient. Or perhaps the fact that Penny is frequently too preoccupied with "The Price is Right" rather than greeting visitors offended his sensibilities. Alas, no organization is perfect.

I bid you all a good afternoon and assure you I am your leading defender of Liberty, Fraternity and Equality,

Raul Bloodworth, esq.

4524. Debating the ARRL

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-11 00:00:00 UTC
From: TheTechTeacher@my-dejanews.com
Message-ID: <6lpi43$ks6$1@nnrp1.dejanews.com>
Source record: 170099
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Dear Gentlemen,

It has come to my attention, as so many things do, that Mr. Bloom also critiqued, again erroneously, my commentary on the ARRL's financial remuneration. Again, as I said before, no one individual there is a for-profit, by the copy royalty paid, writer. No one person is the publisher whose wallet does now shrink, then grow according to how many of the books he has authored are sold. No one is a stockholder of the ARRL.

Now SCO believes that ARRL, of which QST and membership are the same, profits. Again, yes, the body public does, as an incorporated entity. But no one profits per se. They are salaried, and thus are not profitting as

I bid you a excellent repast,

Raul Bloodworth, esq.

pruth@alpha.cc.oberlin.edu wrote:
>
The real point of power is 3 db increase in relative signal strength (at the receive point) every time you double your output power. And 3 db can be difficult to see on a meter or hear in the signal. Of course, when you go from 100 watts output to 800 watts you have made a gain of 9 db. This is really noticable at the receiving end. To get another 3 db gain you will need to increase output power to 1600 watts (example only - so don't worry about the 1500 watt limit).

Read this several times and you will see that those big LEGAL amplifiers don't do much over what the midsize amplifiers do.

My 2 cents worth on the subject.

> N3CND
> Real Radio
Well I geuss you all know how I feel the QRMing seems to be a problem
not only where I hang out but up and down 75. the 3950 group has their
idoits and the 3901 has theirs. I do belive if the FCC were to nail two
or there of these high profile QRMers K4OKA KD4CDB W4FQF W4LLI Frank
Todd no license I bet alot of it would stop. Like 3950 we of 3901 have a
very wide coverge area. We aren't like so of these clicks that are with
in 100 200 miles of each other. on 3901 we cover florida to canda and as
far west ans texas and South Dakota. That is a very wide coverage area
for even 75 meters So these QRMers just love to mess up good quality
hamming. When I had my station set up in Forest Hill Maryland I used to
hang out on 3950 and so I know that you guys there are going through the
same crap that we are going through on 3901 with the stumpjumper/barf

trash. If you didn't know it that are the names the group of idoits put on itself to do all of this organized jamming! With the death of CW around the corner I look for this kind of crap to only get worse unless the FCC has a major crack down.
73 from Oris
I think the stumpjumper organzation is abunch of trash
and James the pig Vomit Obrian the third is the very top of the
trash heap but running a close second is Al the hickory hog Abernathy
and running in neck to neck is the bird watcher Polly.
What a bunch of losers!

Lets not forget about donations, endowments and profits from sales of books,advertisement in QST and the leagues other published media and hundreds of other types of media such as code tapes, videos, maps, computer programs etc. In fact the league is more of a huge publishing concern than a non profit Amateur Radio organization.

Source record: 170118

The Center for Amateur Radio Learning (C.A.R.L.) received some excellent publicity on June 11th when CH-3, KTVK, aired their "Hurrah for Arizona" segment featuring the W7ASC ham station at the Arizona Science Center. CH-3 commentator, Jana Bommersbach, interviewed my wife, Charlotte Horwitz, KB7TKQ, they discussed many virtues of amateur radio and many of the different aspects of our hobby including communications with MIR and HF communications. Pete Pederson, W7KTK, was also on hand. Pete was operating the HF station and made a few contacts for the demonstration. Over 1 hour of video was edited down to just a few minutes of air play, but I feel the finished piece really showed our project in a positive light.

It just so happened that a group of 18 children in a local home schooling network planned to visit the station the same day. They came to the Arizona Science Center specifically to learn more about amateur radio. The teachers had seen the station on a previous field trip and wanted to have a more in depth discussion of our hobby directed to their students. The kids really seemed to enjoy the extra attention they received by the video crew. They also received expert instruction from Charlotte and Ray Sumner, NW7R. Charlotte, gave them a basic overview of the hobby and Ray provided them with technical information. In all the day went extremely well.

We are in desperate need for more volunteers to work in the ham station this summer. Our regular volunteers have been leaving for summer vacation and the winter visitors have now all gone to their summer homes for the year. Any time that you could give us at the station would be GREATLY appreciated. I know there must be some of you who have thought about working at W7ASC, now is the time to step forward and make a contribution to your hobby. The station has been operational every day for over 13 months and we don't want to see it close now. I realize people have very busy schedules and that the drive can be quite long for some, but the benefits to yourself and your hobby are worth the effort. The personal benefits come in the form of excitement and personal motivation which occurs when you see the children responding so positively to the exhibit, there are also free passes available after 50 hours and an Arizona Science Center membership for 100 hours of service. An added benefit is the interaction that you have with your fellow hams while working at the station. The benefits to our hobby are obvious, we have already brought many new operators into our hobby by introducing them to ham radio at the W7ASC station. We also promote the public service aspect of amateur radio, explaining to our visitors how hams help out in disasters and public service projects such as bike rides and walk-a-thons. Projects such as the Center for Amateur Radio Learning will help ensure the future of amateur radio by bringing new recruits into the hobby.

If you would like to help us promote amateur radio by volunteering your time, please contact Charlotte, KB7TKQ, at 602-561-8405 or e-mail, kb7tkq@w7asc.org. You can visit our web-site online: www.w7asc.org there you will find more information about our project and our sponsors, there is also a volunteer application available online.

Finally, I would like to thank all of the volunteers who are currently working at the W7ASC station, your efforts are greatly appreciated.

>
>Burt

Are you proud of being an American? Are you proud of your constant bigotry and defamation of ham spirit in ham newsgroups? Are you proud of bragging about stuff that nobody cares about? Are you proud of having been kicked out of the VEC program? Are you proud of your human interrelational deficiencies?

Just to make sure that even an intellectually disadvantaged individual as yourself understands: I am _happy_ to live in Berlin and I do not regret to say so in a .sig file. To insinuate any connexion between mentioning my current place of living to the Third Reich is as absurd as the statement that Mr. Fisher is representative of the ham community. And I sign "Peter Lemken, Berlin" with just the same pride as I sign with other locations from New York to San Francisco as you may want to look up in DejaNews.

And where was I bragging about the Third Reich? Any proof or was that just another display of your formidable eloquence in terms of racial bigotry towards German people?

Oh, BTW, I remember that one American president (and it was neither Roosevelt nor Bush) went to a place close to my home and held a speech, the climax of which contained the words "Ich bin ein Berliner". Now, what is that connexion between Mr. Kennedy's statement and the Third Reich? Or was he saying "I am a donut" after all? Praise the Lord, BF has just rewritten history.....

>for 'normal' ham radio use.

Well, David power is everything.. There are too many amateurs out there with weak signals and not enough professionals who know how to put out a signal that packs a wallop. Way I figure it, if you've got something to say, it damn well needs to be heard.

I agree with the other posts here that say you need an excellent antenna. I don't agree with those who don't seem to know how to calculate dB differences between 100 watts and 1.5KW. But what you really need is the best of all worlds. A gain antenna, a high power radio station and effective operating tehniques too.

You;ll need brute force RF if you like the idea of setting on a frequency and making sure some bully doesn't come along and steal it from you. FCC says use the minimum amount of power necessary to communicate. I say use the minimum amount of power necessary to DOMINATE.

Oh sure, you can tinker around with those puny little amplifiers that strain their guts out to deliver a kw pep. But my recommendation is equip yourself with a real power plant that provides effortless power output.

As for this 5 watt argument, there is a popular phrase that goes something like "Life is too short for QRP". Who has time to scrape and scratch just to achieve a marginal radio contact?

Good luck getting your ticket again. C'mon back in and put a real signal on the air.

Young enough with 33 years of age. Started CW at age 13, got my equivalent of
the US Extra ticket at age 14 and still love it.

Any questions?

Reading doesn't seem to be one of your well mastered skills. I was talking about
the ham community and not someone on the street. After all, we are discussing
it in an internet newsgroup devoted to ham radio, not boasting about it at
Speaker's Corner.

Get the drift?

Power means less time wasted in pileups. While everybody else is in the fray you are looking for more DX. Maybe some people like the frustration of endlessly calling in a pileup. Whatever.

>--

I like bugs myself, Will, though on the air I usually prefer the straight key. Left hand bugs are pretty rare, but once in a while Vibroplex will do a short run of them. The standaard bug uses the right thumb for dits and right forefinger for dahs... in other words the lever moves to the right for dits and the left for dah. They are fascinating to watch in action, especially the rare double bugs that have dual armatures, one fir dit and one for dah. Very difficult to set these up initially, and they requre some skill to make them sound right, timing/spacing wise, but they are a joy to watch and to use. I have built a left-handed bug and a couple of doubles. I also converted a right handed vibroplex to left handed use. This only involved making a new baseplate, drilling and tapping a new hole on the crane for the dit tension spring, and drilling the holes out on the new base mirror imaged to the old base. The armature boes in upside down, the damper is reversed, and the fixed dah contact goes on the other side. I since changed it back.

When you start out with the bug, record your sending and play it back. Critique yourself. Work on getting your spacing, dah length, and transition time from dit to dah and vice versa down pat. The worst mistake you can make and the most common too, is to set the dit speed too high and use super long dahs when asked to QRS. That makes your code harder, not easier to copy. If you don't have enough weight, drill out a 2 ounce egg shaped fishing sinker, tap it and install a knurled set screw. Brass is even better if you have some 5/8 or 3/4 brass rod around. You can even use a piece of copper tubing slipped on the end of the armature, extending outward a couple of inches. Just crimp the tubing for a tight fit. You can also try get another big weght from Vibroplex for one of their bugs... they probably cost 2 or 3 bucks.

As to which side to use for which on your paddle, if one or the other definitely feels more comfortable, well, go for it. It is good to be able to use the most common setup, but don't lose sleep over it.

4558. acceptable third party use?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-11 00:00:00 UTC
From: jegastineau@mindspring.com
Message-ID: <357f61af.9642385@news.mindspring.com>
Source record: 170143

Two different hams in my acquaintance, one an Extra and the other an Advanced, have said that it is acceptable 3rd party use to hand an HT to a non-ham friend, and talk to him from another HT. The specific use was traveling down a highway with the non-ham in another car, and the frequency used was simplex only.

I don't understand how this is within the rules, since the other station is not under direct control of an amateur.

Comments?

But as a practical measure, what difference does it make? The FCC does nothing
about your constant jamming activities on 3950, so I doubt rather seriously
that they are going to be concerned with whether or not a 2-meter HT is being
used properly by a third party.

Can't help but to notice how quick the media is to jump on the story of the black man in Texas who was allegedly dragged behind a pickup truck by three white men. Instantly, it is automatically dubbed a "hate crime" with the FBI, Janet Reno, NAACP, etc., on their way to Texas to investigate.

What about the case of Reginald Denny, the white truck driver who was dragged from his cab and beaten senseless by a mob of black animals during the L.A. riots of six years ago? Funny how "hate crime" was never mentioned in connection with that incident.

Paul,

I own the 418 and like it very much. An excellent tool. Several folks
have borrowed it and, then, bought their own. Quite a versatile tool.
I prefer the 418 over the others because of its LCD display.

Hello,

If anyone knows of any YL nets that meet regularly on the HF bands,
please e-mail me with times (UTC), days, and frequencies. You may
even post to this thread for the benefit of others.

Thanks and 73's,
Jeff

>I think I see the problem with the Code. It is the mindset that people
>believe that they cannot learn it or that they feel it is a dead end anyway so
>why learn.

I think I see the problem with the Code. It is the mindset that people
believe that anyone who doesn't learn it are simply too lazy or stupid to do
so, or feel that somehow the fact that they did learn it empowers them with
some magical quality that sets them above those that don't.

>A little practice and a good mind set will enable you to do just
>about anything you want to do. I thought the code was tough but if I wanted
>to have fun on amateur radio I learned the code.

I won't reiterate that like most physical skills, we are all on a bell
curve, and the skills that just require "the right mind set" for some are
virtually impossible for others.

As for "fun", I do plenty of tough things that I think are fun. I do
however, reserve the right to pick which tough things to waste my time on.

>One thing to remember is
>that there are many aspects of ham radio and even if you don't like or want to
>do those things you have the privilege not to do them but don't criticize
>those that do enjoy that part of ham radio.

You are completely correct: those that like Morse should not denigrate those
that don't. I couldn't agree more.

Hi Jerry OM,
Sorry to hear your plight with the Conformist Nazis. I now regularly
see real estate flyers with "NO CC&R's" prominently posted on the sheet,
as an added plus for the buyer. Maybe, slowly, things are a-changin',
as more people become disgusted with signing over their property rights
to their neighbors for zero cost. Never did like Communism...

73 and GL on the new QTH!

wrote:

|I work in the ambulance service, and am designing a power control
center
|
|for my car that will distribute power (using automotive-style relays)
to
|
|my overhead lights, rear deck lights, high and low power radios, and
EMS
|
|alert receivers, as well as an inverter and some auxillary power
sockets
|
|in the trunk and back seat. I have two questions:
|
|1) The relays I'm purchasing are rated 20amp at 28VDC. I'd assume
that
|Ohm's law would allow me to run approx. 40amps through them at 12VDC.
Am
|
|I correct, or am I asking for some melted relays?!?
No wrong both are maximum.

|
|2) I need, at peak periods of operation, to pull as much as 40 to 50
|amps from my auto battery to my trunk, where the control modules and
|relays will be located. I was thinking about using one (or several)
runs
|
|of 15A@125VAC lamp cord, or standard ROMEX cable. How much current
does
|your typical ROMEX cable or your average lamp cord handle at 12VDC,
as
|opposed to the 125VAC that they're designed for?
|
|OK So I lied...I have one more question:
|
|Is it better to fuse the runs at the battery, at the module (relays)
or
|both?
Put a starter cable in the car it is rated as much as 200 amps for

short time.
Fuse it at the battery as the cables will be protected against short.

A CAPITAL REGION DX CLUB?

The NCR is blessed with many active ham radio clubs but one thing that is missing is a club, or group, that is keenly interested in HF DXing. We believe from our own contacts, and the knowledge that there are about 800 licensed hams in the area, that there must be at least 50 active DXers, perhaps more, who might be interested in a club. Its to these hams, and to those who would like to know more about DXing, that this message is particularly addressed, do you agree that we should explore together the possibility of setting up a club with a strong emphasis on DXing?

We think there would be real advantages to this group getting to know each other and having presentations at meetings and perhaps competing, in a friendly manner, in various contests and challenges designed to add some local zip to DXing. Thought could also be given to activating desirable DX.

We have no pre-conceived ideas of how and where we would meet, or how often. This would be for the group as a whole to decide. We intend to approach other DX clubs in Canada and abroad to get ideas on what works and what doesn't for such a club.

We have to start somewhere so we suggest that any hams who find this idea attractive should get in touch with one of the authors of this message so we can build up a list of potential members and start the ball rolling.

In closing we should stress that we are not trying to "steal" members from any of the NCR's existing clubs. We feel the DX club would be filling a gap in NCR's club activities and hence should not be seen as a threat to other clubs' memberships.

Interested hams should get in touch with one of the authors of this message, David George VE3UOL or Paul Cooper VE3JLP. We encourage you to respond by e-mail and ask those doing so to please use "Capital Region DX Club" as their message "Subject".

Here is how you can contact us:

David George, VE3UOL
125 Dunhaven Dr. RR#2
Box 8040 Dunrobin.

ANDY THOMAS BIDS MIR FAREWELL

US astronaut Andy Thomas, KD5CHF, said good-bye
and good riddance to Mir and the obnoxious Russians on board June 8
as he left for home aboard the shuttle named in Sen Kennedy's honor,
Recovery after spending 130 torturous days in space. The shuttle was
due to return to Earth June 12 but is going to be late due to a quick
ARRL tour.

Before he left the aging ham population behind
for good, Thomas broadcast a general "thank you for boring me to
bloody death blokes" to the worldwide amateur community via the R0MIR
1200 baude, slow as molasses in the January shade, packet system. "I
am leaving Mir today, and this will be my last message, thank God" he
said, adding "free ay last, free at last, thank God almighty we free
at last". "Thank you all for your boring, repetitive contacts in the
mission and your messages." Thomas again apologized to NASA for not
being able to disconnect the on board 2 meter antenna. "I wish you
all every success in conning world governments as to your necessity
in the new millenium. Good-bye and good luck getting lives" Thomas is
the last US astronaut scheduled to do his duty aboard Mir.

The day after Recovery docked with Mir, June 5,
Thomas engaged a last-minute trickle of so-called random Amateur
Radio contacts on 2-meter FM simplex (145.985 MHz), but only with
contest losers running 1 kw on FM to 40 element yagis. It happened
after Thomas tried unsuccessfully to reach W5RRR, the Johnson Space
Center club station where the aged members who served during the
Apollo flights were napping soundly. Al Lark, KD4SFF, in Greenville,
South Carolina, broke in and offered to secede from the Union and
join Austrailia, and the two got into a argument. Thomas told Lark
that "a decent hot cannonball is going to be the first order of
business" on Earth. Follow>

Propagation Forecast Bulletin 24 ARLP024
From Tad Cook, K7VVV
Seattle, WA June 12, 1998
To all radio amateurs

SB PROP ARL ARLP024
ARLP024 Propagation de K7VVV

Solar activity was up again last week. Average solar flux for the previous 90 days rose one point to 110, and flux values were above this level on every day, which indicates an upward trend. Geomagnetic indices showed fairly unsettled conditions, particularly on June 7 when planetary K indices went as high as four and five.

The predicted solar flux for this weekend, Friday through Sunday, is 115, 120 and 122, and the planetary A index is expected to be 10, 8 and 12. Beyond that the solar flux is may peak for the short term around 126 on June 16 or 17, then drop below 120 by June 20, below 115 by June 24, and bottom out above 110 for June 26 through July 6. Somewhat unsettled geomagnetic conditions may appear again June 19-21 and July 2-4. Old region 8226 appeared to be growing as it left the west limb of the sun near the end of May, and it could produce some flares between June 12-25.

Dr. Dick Altrock of the USAF released a statement in conjunction with the National Solar Observatory about the peak of this solar cycle. He is looking at long-term variation of solar emission features that move toward the solar poles prior to solar cycle maximum. Since this emission feature already appeared over a year ago at 55 degrees north latitude and is continuing to move toward the poles, the solar maximum earlier believed to be slated for 2000 is now predicted for next year.

From VHF reports, GJ4ICD reports fantastic conditions on six meters, and N7EIJ near Portland, Oregon reported working N7ML in Montana on aurora and backscatter on the same band over the weekend. On the same date VE6XT in Calgary reported incredible auroral E conditions on six with stations all across Canada and Alaska. Also on Saturday K2SPO in New York worked EH7KW (Spain) on

six.

N1BUG has a wonderful site on the web for monitoring auroras that can be found on the web via a couple of URLs, including http://www.mint.net/~n1bug/prop/aumon/aufr.html and also http://www.qsl.net/n1bug/prop/aumon/aufr.html.

Sunspot Numbers for June 4 through June 10 were 92, 99, 110, 96, 104, 101 and 103 with a mean of 100.7. 10.7 cm flux was 111.7, 115, 115.1, 113, 116.9, 112.3 and 112.4, with a mean of 113.8, and estimated planetary A indices were 12, 13, 14, 18, 12, 10, and 15, with a mean of 13.4.

Glenn,

I also bought 2 of the SEC1223 Samlex 23 amp supplies from TechAmerica
and all I can say is that they are great! The price is a steal. HRO was selling
them
for $120, but just lowered their price (I was told) to $100.

They create no discernable hash of any kind. The switching frequency is 50KHz,
(which is not published, but is accurate). They have a fan which comes on at 70
deg. C and at 100 deg. C the whole unit shuts down (thermally) until the temp
drops.

It has total short circuit protection in that a direct short pulls the voltage down
to zero
(obviously), but draws NO current, and then recovers right away when the short is
lifted. They are NOT ICS rated (as is the SEC 1212 - 12AMP version). Even though
you may see literature to that effect. If seen it is a mistake (direct from the
factory).
The upper limit is 25 amps, and when that amount of power drain is reached, it is
maxed out, and that is all that it can or will supply prior to starting to shut
down. In
most all cases, it will operate just about any 100 watt rig or VHF/UHF amplifer.
They weigh around 3 pounds and are essentially silent in operation.

In general, I wouldn't hesitate to recommend them, especially at that price, $80.
But
don't expect them to last at that price at TechAmerica or see it anywhere else at
that
price. It is truly a loss leader, but a great one for us hams. Buy 1, no make
that 2, NOW!
I did.

Best regards,

Alan, de WA6AQC

Hi,

Just a word to let you know that HamNet-UK is now online and revamped.

It now includes a very up to date software section, hundreds of UK and foreign links, a hardware section (nearly completed) containing circuit diagrams etc, plus loads of other bits and pieces. Its really worth a visit! And its updated very regularly.

Thanks for your time.

HamNet-UK Team

Probably the best Ham Radio Site in the U.K.

In the real world 100 watts seems to be the magic figure of.....if you hear it you may talk to it. But as on of your other respondants noted.... you may not make up for a six inch antenna with 1500 watts. The primary investment in the shack should primarily be the best antenna that you can afford......wether its a tall long wire or a $85,000 tower rig.

>but we are no Nazis.

Well said Burt. Aged 33, _I_ most certainly can claim not to have a Nazi, err, what was the spelling again, heritage?... And, by the way, who says I am a German? Does my current place of living make me a German? My mastery of the German language? My name? My callsign?

Burt, get used to it. You may encounter Germans you may not be able to identify as that in a personal encounter. What do you do then? Do you see a swastika tattoeed invisibly into their forehead or do they just look German or (perish the thought!) allow themselves the luxury of an opinion (GASP!).

>

>Peter Lemken.

Well, that is exactly what 99% of this newsgroup's participants would call it. None given or taken, since one loner like you wouldn't matter anyway.

And try to learn to express yourself with a little more precise structural grammar and spelling. As the teacher you claim to be, your command of the written English language is pretty bad for a native speaker.

>
> Are you proud of having been kicked
>>out of the VEC program?
>
>To be called a bozo by a bozo is a credit.

Well, Burt, to call me a Bozo you would at least have to try to find something I have been kicked out of and bickered about it the way you did. Good luck in finding something like that in connexion with my person.

Any questions, BOZO?

>
> Are you proud of your human interrelational
>>deficiencies?

>
>
>Which are?

Racial bigotry towards Germans and other hams who admit to even answer the CQ of a German. Add to that the fact that you claim to be interested in the culture of other people and you may see what human interrelational deficiencies are. In that context you may also want to add the words hippocrite and radicalist to your personal dictionary of your own deficiencies.

>
>And I sign "Peter Lemken, Berlin" with just the same pride as I

I'm selling my HTX-202; not because it isn't a decent 2m HT, but only because I never got interested in FM, VHF, or fone. I have a fairly high opinion of it myself.(the rig, not the mode) Sure it's big and clunky, and is 10+ year old technology, but it works, is fairly tolerant of abuse, and it doesn't cost an arm and a leg. Warranty service seems to be fair to good from what I have heard. Only used mine a half dozen times so mine hasn't had a chance to break yet for me to find out first-hand. For a first 2m rig for the budget-oriented ham who won't settle for a used rig, I have no qualms about recommending it. It is easy to figure out and has enough muscle that it does OK on nearby repeaters. It ain't no thoroughbred... just a dependable old plow horse.

Also, as was pointed out a few days ago, it would make a formidable weapon in a pinch.

>

I used to run into a couple at the bottom of 40 meters. One was on a sailing yacht somewhere around Bermuda where she pretty much hangs. Both were US callsigns. The one on the sailboat had a pretty nice fist as I recall.

Seems like a lot of YLs who dislike the gender-specific attention prefer CW, where it is not so obvious that they are YLs. Try working the YL roundup. you might get some regular skeds started. Also try contacting the YLRL or whatever it is called... Anyway the main ham club for YLs. I normally don't steer peole towards contests, but in your case a YL contest might be just the thing to meet babes on the air where they won't feel like prey.

>
>
>

I dunno... most hams have a couple years of back QSTs, and just about everybody at least knows somebody who has the Handbook. I think they are decent references to most questions, in that there is usually plenty of related info in some depth. Sometimes a question is more readily answered by drawings than a paragraph of esplanation.

I agree, there ought to be an abridged version of the index. I keep my own. I use a Works database for this. When I get my QST, as I go through it I enter interesting, informative articles into the database with the following fields: heading, sub-heading, subject or title of article, name of magazine or book, year, month, and page number. Then when I need that info I can sort by any of the fields. I completely ignore articles and features I know I will have no use for, like DX/contesting articles, packet stuff, VHF/UHF, etc. Typically I will add two or three records to the database every issue. Also I make notes on the spine of the magazine. CQ, 73, etc are spneless, that is, do not have flat spines, but I use old floppy labels wrapped across the back with the subject and pg number for important articles.

BTW, I usually give my old handbook to a new ham when I spring for a new one. Makes for hundreds of hours of reading and gives the new ham the closest thing we have to a one stop shop for tech info. I copy or scan stuff I want to keep that is not in the new book. I think the thanks I get when I do this is genuine.

>7. A Nazi connection in ham radio?

There definitely is one! And Burp is the missing link. For those interested in the claim: Visit Barf Tisher's web page and take a look at the vehicle he uses to get to work. It is a "PUCH Mofa" (Mofa being the abbreviation for "MOtorisiertes FAhrrad" (motorized bicycle) in German).

For the ones wondering: Puch is an Austrian company. For those historically uninformed: Hitler was not German, but was born in Braunau am Inn, Austria (Oberï¿½sterreich).

To see Barf Tisher proudly bragging about his vehicle of transportation is hilarious to this poster, especially considering the fact that a grown up would use it at all. (Certainly not for environmental reaons, since the engines burns a 50/50 mixture of gas and oil. In Europe this vehicle can be used by anyone without a driver's license. Hm, Bust, did you have a problem with your local traffic cop at one point?

And this guy actually dedicates a website to this toy. Bwaaaahaaaaa.....

Jim,

I'm not the least bit surprised by your current webrant ... not
by the way everything is conveniently taken out of context, nor
the lack of balance and fairness, nor the plethora of unsubstantiated
allegations and outright lies ... none of it surprises me coming from
you.

You choose to missrepresent me as a person and use me amongst
others as a target to take cheap shots at NCI ... fine.

NCI as an organization acts with integrity and neither I nor
any of the members of its board have to answer to or justify
ourselves to you. Neither do we (I or NCI) need your approval
or some sort of "validation" from the likes of you.

All one has to do is read the REST of your rants about no-coders,
techs, etc. to see how "balanced" and "objective" YOU are.

I need some help with a tape recorder interface I'm building.
I'm trying to add a small jack to my scanner that'll plug
directly into a tape recorder's "remote" jack via a cable
that'll automatically start the tape recorder when the squelch
is broken and will stop it when the transmission stops.

If I use a RS 42-2152 dubbing cable, this'll condense a whole
night's, or even day's, scanning into just a few minutes. It'll
also have other useful purposes.

I know it has to do with the Scan Control pin, but how do I go
about doing this? I'm looking into it closing a relay when the
pin goes active so that the two devices will remain isolated.

I plan on doing this mod to several scanners, so general
instructions about how to do it with different battery sources,
different pins, etc., would be more than helpful for me and a
couple of friends.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,
tdragonn@blarg.net

You are correct on one point and wrong on another.

I have enough trouble keeping myself in line, I don't
worry about how the other fellow is doing.

As to the Navy issuing me the Code. First of all I was
in RM "A" School learning the code at the age of 17.
Most kids back then (1957) were still living off of
Pop, borrowing the Oldsmobile on Saturday night to
take little Susie to the drive inn for a round of playing
stink finger.

After I saw what I had gotten into I would gladly have
traded places. Let him spend 4 hours a day copying code,
let me play stink finger with Susy.

I did my code practiced when the Navy said I would.
You can do yours when it is convient for you. That
might explain why I think I could run circles around
you as far as the code goes.

Next I was under pressure that you can not imagine.
What if you don't get your speed up for the license
you want . all that means is no license .. maybe you
chipping your teeth about the code being a requirement.
For me I had to solid copy for, it was a long time ago,
but I think it was 30 minutes, maybe an hour, 24 WPM.
That was at least 30 minutes at 24 WPM 5 letter groups
to graduate. It was in the week before the final week
that I did that. Had I not I would have ended up chipping
paint and swabbing decks.

I use to feel a little guilty that on an instant notice I could
pass any Amateur code test around while others had to
spend time practicing. Well hell, I spent time practicing
too, at 17 like I said and under pressure. So your attempt
at making me feel guilty don't wash.

Finally, back in 1988 I went on a CW binge on 40 meters.
For 8 months I worked CW for about 8 hours a day. I ended
up copying code at 25 WPM with a pencil rock solid for about
20 minutes then my hand got tired from writing. I could read
30 WPM in my head pretty solid but could not write that fast.

So nobody drilled a hole in my head and poured the code in then
plugged up the hole. They won't for you either. If you want to learn
the code you are gonna have to work at it same way I did.

That's just "The way things are".

New subject:

If you feel the Brady law is a bad law take a look at the
Gun Page at my site. There is a bill floating around that
will kill Brady if passed.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I could not think of anything witty to say here.
So I plagiarized Lee Taylor.

If ignorance is bliss,
anti-gunners should be the happiest people in the world.

4616. New DJ-S41TU Mod

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-12 00:00:00 UTC
From: Jim Finney <jpfin@worldnet.att.net>
Message-ID: <6lsnsc$9vr@bgtnsc03.worldnet.att.net>
Source record: 170002
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello,

I have owned an Alinco DJ-S41 440 micro handheld for about a year now and I liked it so much that I bought a second one. It's model number is DJ-S41TU. I performed the wideband mod on it by removing the small green resistor. Doing this mod opened up the RX to about 475mHz. The TX is opened to only 455mHz. On my original DJ-S41, doing this mod opened up both the TX and RX to around 475mHz. On the circuit board of the TU model, I noticed an additional place for a jumper next to the green resistor, that is not on the non-TU model.

Anybody know how, and if, this DJ-S41TU model can be opened up the same as the DJ-S41 model?

Thanks,

Jim...
WA5VPW

IN THIS EDITION:
* +Many comment on LMCC petition
* +Ham letters on LMCC flood FCC
* +Andy Thomas bids Mir farewell
* +Next WRC to be in 2000
* +WB6BYU to lead US ARDF team
* +Doug Smith, KF6DX, named QEX Editor
* K5TR is new QST Contest Corral/Special events editor
* FCC sequential call sign update
* Solar update
* IN BRIEF: This weekend on the radio;
Vanity update; Dayton attendance up!
Filing deadline extended; Nominations due

+Available on ARRL Audio News

MANY COMMENT ON LMCC PETITION

Hundreds of formal comments have been filed in the wake of the Land Mobile Communications Council's rulemaking petition (RM-9267) seeking primary access to 420 to 430 MHz and 440 to 450 MHz for the Private Mobile Radio Service (PMRS) at the expense of the federal government. The petition also seeks other UHF spectrum. It's now expected that the FCC will extend the comment deadline on the LMCC petition.

Among formal commenters, those weighing in on the side of Amateur Radio--at least in terms of preserving the current secondary (shared) allocation on 70 cm for ham use--included the ARRL (see "ARRL asks FCC to deny LMCC 70 cm grab," The ARRL Letter, Vol 17, No. 23); the National Telecommunications and Information Administration (NTIA), which manages federal spectrum; the Quarter Century Wireless Association (QCWA); the Amateur Television Network; the Sarpy County, Nebraska, Emergency Management Agency; the Washtenaw County, Michigan, Emergency Management Division; the DiPaolo Timber Corporation; AMSAT-NA, and the Association of Public-Safety Communications

Officials-International (APCO). All cited the public service benefit derived from volunteer Amateur Radio operations in the event of emergencies and disasters.

Washtenaw County Director of Emergency Management Marc Breckenridge called 440 to 450 MHz "a priceless resource to emergency management organizations" and said its reallocation would not be in the public interest. DiPaolo Timber CEO Carl DiPaolo, W7EXH, likened the sharing arrangement by hams and the federal government to "multiple use of the forests, many citizen users sharing a resource." DiPaolo went on to day, "Once the PMRS users get to the frequency area, it is lost forever." There's "no way" amateurs could be secondary to PMRS, he concluded.

AMSAT-NA President Bill Tynan, W3XO, mentioned use of 70 cm for the upcoming Phase 3D satellite and pointed out that the International Space Station is expected to make "heavy use" of the band for Amateur Radio. Ham radio is an official ISS payload. In all, AMSAT-NA cited more than a dozen examples of current and future amateur use of 70 cm (see http://www.amsat.org/amsat/regs/rm9267c1.html).

But it was the NTIA that spoke the loudest in favor of retaining the current federal-amateur sharing arrangement on 70 cm. The NTIA said it supports amateur operation at 70 cm and other bands "as an important adjunct to the National Communications System and the National Weather Service, and with general recognition of the valuable public service performed" by hams. Amateur operations "share well" with military radiolocation radars because hams can tolerate the restrictions involved. But, the NTIA's bottom line was that "critical Federal operations in the 420-450 MHz band" make it inappropriate to consider reallocation. The NTIA also noted that Wind Profiler Radar operations at 448 to 450 MHz--which the LMCC had suggested be "discouraged"--are operational, not experimental. The NTIA said it "consulted extensively" with the amateur community to coordinate WPR operation and said plans for an extensive WPR network at 449 MHz were proceeding.

Annexed to the NTIA comments were individual comments from members of the Interdepartment Radio Advisory Committee. These include federal agencies ranging from USDA, the National Weather Service, and the Department of Defense to NASA. All opposed reallocation from the federal government. Some, such as the NWS, specifically cited the value of Amateur Radio public service and the network of 150,000 weather spotters on call for emergencies. On a more practical level, the Department of Defense said that interference from its radars and communication activities--including "very high power critical safety-of-life command destruct, flight termination and drone control"--would preclude sharing with PMRS.

Several commenters were altogether silent on amateur issues. A few challenged the FCC to address the larger issue of private wireless spectrum allocation policy or urged the FCC to issue a Notice of Inquiry to initiate a dialogue on spectrum needs. The Industrial Telecommunications Association (ITA) encouraged the Commission to respond "with a publication of its own views on the character and needs of the private wireless community." The ITA

said the petition "makes a compelling case" for additional PMRS spectrum. Other commenters said they felt the needs of the private radio community had been subsumed by demand for consumer wireless services. Some debunked the notion that commercial services could satisfy private wireless needs.

Some organizations indicated full and wholehearted support for the LMCC petition. These included the UTC, The Telecommunications Association, an LMCC member that, itself, represents other commercial spectrum users. Motorola declared that private wireless users "are in dire need" of new spectrum. The American Petroleum Institute urged the FCC to "move forward as soon as possible" on the LMCC petition.

A copy of the League's comments is available at http://www.arrl.org/news/bandthreat/RM-9267/arrl-cmt.html. Selected comments on RM-9267 also have been posted to the ARRL Web site.

MORE ON LMCC PETITION: HAMS FLOOD FCC WITH LMCC LETTERS; AAA CHANGES TUNE

The June 8 issue of Wireless Week reports that hams "flooded the FCC with letters" opposing RM-9267, "often in vehement terms." The article, "Hams Oppose Spectrum Sharing," by Caron Carlson, says that hams "warned the FCC that any further loss of their spectrum would be debilitating to the services they provide to the public free of charge," including help in natural disasters and emergencies. Carlson quoted as a typical comment one from John Kovac, K0VAC, a medical doctor from Hermosa Beach, California who's involved in disaster communication. "The reallocation of these frequencies would be a disaster in its own right," Kovac told the FCC.

In a related matter, the Automobile Club of America says it got incorrect information from the LMCC about how amateur frequencies came to be identified as targets for reallocation. Triple-A had told some correspondents that the Spectrum Planning and Policy Advisory Committee (SPAC) worked with the NTIA to identify 70 cm for reallocation (see "More LMCC developments: support from APCO; AAA admonished," The ARRL Letter, Vol 17, No 23). "We now know that was incorrect and that it was the LMCC that initiated the plan without support from either SPAC or NTIA," the AAA's Gary Ruark said in response to a letter from ARRL Executive Vice President David Sumner, K1ZZ. Ruark said AAA's future correspondence would "reflect the correct information."

Ruark also said AAA would contact the LMCC secretary and other Council members to discuss the status of the petition. "We are aware that the Association of Public Safety Communications Officials (APCO) has withdrawn its support and that may have a bearing on how the remaining LMCC members perceive the value of the petition," Ruark wrote.

ANDY THOMAS BIDS MIR FAREWELL

US astronaut Andy Thomas, KD5CHF, said good-bye to Mir June 8 as he left for home aboard the shuttle Discovery after spending 130 days in space. The shuttle was due to return to Earth June 12.

Before he left the aging Russian space outpost, Thomas broadcast a general "thank you" to the worldwide amateur community via the R0MIR packet system. "I am leaving Mir today, and this will be my last message," he said. "Thank you all for your interest in the mission and your messages." Thomas again apologized for not being able to give individual replies. "I wish you all every success. Good-bye and good luck." Thomas is the last US astronaut scheduled to serve a tour of duty aboard Mir.

The day after Discovery docked with Mir, June 5, Thomas engaged a last-minute flurry of random Amateur Radio contacts on 2-meter FM simplex (145.985 MHz). It happened after Thomas tried unsuccessfully to reach W5RRR, the Johnson Space Center club station. Al Lark, KD4SFF, in Greenville, South Carolina, broke in and offered to help, and the two got into a conversation. Thomas told Lark that "a decent hot shower is going to be the first order of business" on Earth. Following his chat with Lark, Thomas also worked WA6LR, AA2DR, and WF1F, among other stations called. "You guys have given me a lot of pleasure during my time up here," Thomas told AA2DR.

Australian Peter Ellis, VK1KEP, also spoke with Thomas on June 5 and found himself thrust into celebrity status as a result. Thomas, a native of Australia who also holds the call sign VK5MIR, told Ellis that he was the first VK1 he'd ever worked. Trying for some local publicity for Amateur Radio, Ellis notified the local media, and soon wound up in the midst of a media frenzy--on local radio twice, the front page of the Canberra Times, on TV in Canberra and Sydney, and on ABC Radio nationwide. See the whole story at http://www.geocities.com/CapeCanaveral/5796/vk1kep.htm.

During his Mir stay, Thomas spoke frequently with his family via Amateur Radio, sometimes with Tony Hutchison, VK5ZAI, serving as the Earth station. Hutchison says he set up phone patches with Thomas' father, Adrian, 74, who lives in Adelaide. Hutchison also provided Adrian Thomas with a computer to track Mir and a receiver so he could listen to his son's conversations. "Adrian flew bombers during the war and is an extremely interesting man to talk to--and a very proud father as well," Hutchison said. "He said that it has been an ambition of Andy's to become an astronaut since he was a young boy." Hutchison, who attended the same college as Thomas but about a dozen years earlier, said they've never met but he hopes to have the opportunity when Thomas returns to his home country for a visit.

Meanwhile, news reports say that Russia's plans to host French and Slovak astronauts aboard Mir have fallen through. This has again raised expectations that Russia will discard Mir a year ahead of schedule unless it can come up with another way of supporting it financially. Russia has been hoping to keep Mir aloft until 1999, when the International Space Station will be in place.--thanks to Tony Hutchison, VK5ZAI, and QNews

NEXT WRC TO BE IN 2000

It's settled. The next World Radiocommunication Conference--until now referred to as WRC-99 for planning purposes--actually will take place in 2000. The ITU Council decided the question when it met May 20-29 in Geneva. What's now likely to be called WRC-2000 tentatively is set to be held May 8 to June 2 of that year in Istanbul, Turkey. The agenda and final schedule

are subject to confirmation by the ITU Plenipotentiary Conference this fall in Minneapolis. Since 1993, the worldwide conferences have taken place every two years. However, this time, members of the international community felt they needed more time to prepare. The change also means the following WRC won't happen until at least 2002.

Still expected to be lurking in the wings at WRC-2000 and hoping for an allocation of additional spectrum will be the low-Earth orbiting satellite industry, the infamous "Little LEOs." The industry seeks an additional 7 to 10 MHz of spectrum below 1 GHz.

Another potentially hot ham radio topic at the next WRC is a technology called "fixed wireless access." FWA--sometimes called wireless local loop--uses radio instead of wires to connect user telephone or data equipment to an access point in the public switched telephone network. FWA proponents are looking at the suitability of more than 100 frequency bands between 27 MHz and 66 GHz--some of which involve amateur bands.

An ITU task group has also been studying the topic of "unwanted emissions," which includes both spurious emissions and out-of-band (OOB) emissions. OOB emissions include splatter and key clicks. A plan to replace current spurious emission limits with more stringent standards was adopted at WRC-97 (see "WRC-97--An Amateur Radio Perspective," QST, Feb 1998, pp-33-34). Still under consideration are new spurious emission limits for spacecraft and mandatory OOB limits for all radio services.

One issue of concern to hams may be postponed to WRC-2002 or later. The Earth Exploration Satellite Service has been eyeing the 430 to 440 MHz band for use by synthetic aperture radars (SARs). These systems are capable of penetrating the upper canopy of a rain forest to monitor ecological changes. The ARRL and the IARU already have introduced papers expressing concerns with respect to the use of the 420 to 450 MHz band. However, it now appears that the ITU will not take up the issue at the next conference due to a lack of funding.

For more information on WRC-99 preparations, see http://www.fcc.gov/wrc-99.

WB6BYU TO LEAD US ARDF TEAM

Dale Hunt, WB6BYU, of Yamhill, Oregon, will lead the US fox-hunting team at the ninth World Championships of Amateur Radio Direction Finding (ARDF) this fall. The competition of radio orienteers will be held in Hungary during the first week of September. The US foray will mark this country's first effort at the World Championship of foxhunting.

The aptly named Hunt, 45, is experienced in the sport of international-style foxhunting. He competed last year against Russian, Canadian and Japanese hams at the Friendship Radiosport Games near Tokyo, Japan.

Under WB6BYU's leadership, four other West Coast hams are expected to compete on Team USA at the City of Nyiregyhaza, 150 miles east of Budapest. Team USA will be up against hundreds of the best foxhunters from more than two dozen European and Asian countries in a pair of two-hour sprints through

a large forest. "There are two separate transmitter hunts, each on a different day," Moell says. One hunt is on 80 meters (CW foxes) and the other hunt is on 2 meters (MCW AM foxes). "Each hunt has five fox transmitters hidden in a forested area," he explains.

Some spaces remain on the Team USA roster, especially in the Junior Division (boys under 18 years of age), Veteran's Division (men over age 55), and Women's Division (any age, nobody asks!). For information, contact ARRL ARDF Coordinator Joe Moell, K0OV, PO Box 2508, Fullerton, CA 92837; e-mail homingin@aol.com.

For a look at the official invitation to the championships and for more information about ARDF rules, equipment and techniques, see http://members.aol.com/homingin/.

DOUG SMITH, KF6DX, NAMED QEX EDITOR

Doug Smith, KF6DX, the Chief Engineer at Kachina, will take over the editorial reins of QEX--the Forum For Communications Experimenters--beginning with the September issue. The current QEX editor, Rudy Severns, N6LF, is stepping down to devote more time to his business and family. Also, Severns is moving and will take on duties as an adjunct faculty member at Oregon State University in Corvallis, where he'll teach power electronics.

Smith, 40, has spent the past 20 years involved in HF SSB, with a particular emphasis on control systems. He's been with Kachina for five years and was instrumental in the development of the company's PC-controlled 505DSP HF transceiver, which debuted at the 1997 Dayton Hamvention. Smith will continue at Kachina. Previously he worked for Hull Electronics and Transworld Communications.

While DSP has been the focus of the past few years of his career, "I enjoy all aspects of RF engineering," Smith said. Originally from San Diego, California, Smith is a graduate of Cal Tech. He now lives in Sedona, Arizona. Under his leadership, he said, QEX will remain "the mouthpiece of front-level experimentation in Amateur Radio" and will embrace new technologies, while still appealing to a broad readership.

Smith also says he'll be on the lookout for new material. "We're always looking for good, analytical articles," he said. It was Smith's own series of articles on DSP, "Signals, Samples, and Stuff--a DSP Tutorial," that brought him to the attention of ARRL Publications Manager Mark Wilson, K1RO, and QEX Managing Editor Bob Schetgen, KU7G. Smith says DSP will play a big role in the future of communication. "The entire radio industry is pushing toward a direct digital conversion receiver," he said.

Licensed in 1982, Smith has always been on the hobby's cutting edge. He put one of the first scanning HF bulletin boards on the air and was involved in AMTOR before most hams had even heard of it. His current ham radio pursuits include antennas, HF RTTY and SSB, and ragchewing.

Smith says a lot of hams still build their own gear, although he agrees that homebrewing is not as prevalent as it once was. "A lot of hams out there are experimenters," he said, adding that he'd like some of them to consider publishing their projects in QEX. "There are hams out there building a lot of very good equipment, and not all of them are writing about it," he said.

Smith, Severns, Wilson, Schetgen, and other ARRL staff members met in June at ARRL Headquarters to work out the details of the transition from Severns to Smith. That will occur as of the September issue of QEX.

NEW QST CONTEST CORRAL/SPECIAL EVENTS EDITOR

George Fremin III, K5TR, will become the QST Contest Corral and Special Events editor. His appointment is effective with the August 1998 issue. Fremin, who's ex-WB5VZL, lives in Austin, Texas.

Fremin got his first ticket in 1976 at age 13. "I did all of my operating as WB5VZL over the years," he said. "My first contest was the 1977 ARRL 10 Meter Contest. I entered as a Novice and made 22 contacts."

He's expanded his contesting efforts in the intervening years. During the 1980s he operated from the N5AU contest station, and now often works contests from W5KFT, where he spent a lot of time designing the setup and doing antenna work. He's operated the 6D2X multiop station in Mexico as well. "I like all sorts of contests but favor the ARRL SSB Sweepstakes," he said. He's operated the 'phone SS every year since 1979. He also enjoys VHF contesting and fox hunting. Lately, he's been fiddling with QRP.

The 'TR suffix plays a bigger-than-obvious role in Fremin's life. "I sell the TR-Log contest logging program for N6TR. I drive a University of Texas shuttle bus and also work for a small consulting firm run by N5TR," he said.

Fremin holds a BA in history from the University of Texas. Hid dad also is a ham, WB5UKU.

Members can contact Fremin at geoiii@kkn.net. He has a Web site at Web page http://www.kkn.net/~k5tr/.

FCC SEQUENTIAL CALL SIGN UPDATE

The following is a list of FCC sequentially assigned call signs issued as of May 4, 1998. For more information about the sequential call sign system, see Fact Sheet PR5000 #206S.

SOLAR UPDATE

Solar seer Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was up again last week. Average solar flux for the previous 90 days rose one point to 110, and flux values were above this level on every day, which indicates an upward trend. Geomagnetic indices showed fairly unsettled conditions, particularly on June 7 when planetary K indices went as high as four and five.

The predicted solar flux for June 12-14, is 115, 120 and 122, and the planetary A index is expected to be 10, 8 and 12. Beyond that the solar flux is may peak for the short term around 126 on June 16 or 17, then drop below 120 by June 20, below 115 by June 24, and bottom out above 110 for June 26 through July 6. Somewhat unsettled geomagnetic conditions may appear again June 19-21 and July 2-4. Old region 8226 appeared to be growing as it left the west limb of the sun near the end of May, and it could produce some flares between June 12-25.

Dr. Dick Altrock of the US Air Force released a statement in conjunction with the National Solar Observatory about the peak of this solar cycle. He is looking at long-term variation of solar emission features that move toward the solar poles prior to solar cycle maximum. Since this emission feature already appeared over a year ago at 55 degrees north latitude and is continuing to move toward the poles, the solar maximum earlier believed to be slated for 2000 is now predicted for next year.

On VHF, GJ4ICD reports fantastic conditions on 6 meters, and N7EIJ near Portland, Oregon, reported working N7ML in Montana on aurora and backscatter on the same band over the weekend. On the same date VE6XT in Calgary reported incredible auroral E conditions on 6 meters with stations all across Canada and Alaska. Also on Saturday K2SPO in New York worked EH7KW (Spain) on 6.

N1BUG has a wonderful site on the Web to monitor auroras. It's at http://www.mint.net/~n1bug/prop/aumon/aufr.html and at http://www.qsl.net/n1bug/prop/aumon/aufr.html.

Sunspot numbers for June 4 through June 10 were 92, 99, 110, 96, 104, 101 and 103 with a mean of 100.7. The 10.7 cm flux was 111.7, 115, 115.1, 113, 116.9, 112.3 and 112.4, with a mean of 113.8. The estimated planetary A indices were 12, 13, 14, 18, 12, 10, and 15, with a mean of 13.4.

IN BRIEF:

* This weekend on the radio: The ARRL June VHF QSO Party and the TOEC WW Grid Contest are on tap this weekend. Just ahead: The Kid's Day Operating Event, the All-Asia DX Contest (CW), the SMIRK (6-meter) QSO Party, and the West Virginia QSO Party are the weekend of June 20-21. See June QST, page 87, for details.

* Vanity update: The FCC in Gettysburg reports it has processed all vanity applications received through May 21, 1998. On June 9, the FCC granted 59 new call signs. Another 69 applications hit the work in process stack and have been processed.

* Dayton attendance up! Attendance at this year's Dayton Hamvention was up slightly over last year's attendance. Convention General Chairman Dick Miller, N8CBU, reports that 28,120 attended this year's Hamvention. That tops the 28,000 attendance figure from 1997 and reverses a trend of declining attendance. The ARRL National Convention in 2000 will be at the Dayton Hamvention.--thanks to Dave Coons, WT8W

* Filing deadline extended: The FCC has extended the deadline to receive reply comments on its rulemaking petition to implement the Universal Licensing System (ULS), Docket WT 98-20. The new deadline is June 16.--FCC

* Nominations due: Nominations for the AMSAT-NA Board of Directors are now open. AMSAT member societies or five individual members may make nominations of fellow members to serve a two-year term on the board. Three seats on the seven-member board must be filled this year. Board members whose terms are due to end include Keith Baker, KB1SF; Tom Clark, W3IWI; and Andy MacAllister, W5ACM. Persons who accept nomination must understand that meeting attendance is mandatory. There are generally two meetings per year. Nominations should be marked Board of Directors Nomination and sent to AMSAT, 850 Sligo Ave #600, Silver Spring, MD 20910 Nominations must arrive by June 15, 1998. An election will follow.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Hi. I have Sammlex 1223 switching power supply at 23 amps. It is about four months old and is doing just fine. Doesn't generate any extra noise. c

"We" don't have any such group. It is a bogus NG, having been created without adhering to the usual process (Call For Discussion, Call For Votes). It's carried at very few sites.

> Before you flame me, think about it for a second - why do we have
> rec.radio.amateur.swap?

Again, "we" have no such group.

> Of course, maybe the solution is to get rid of the r.r.a.swap as
> unnecesary.

Tale at uu.net did send out a control message to cancel that bogus group but apparently some site admins ignored it.

The only buying/selling group that exists in the rec.radio.* hierarchy is rec.radio.swap; all WTB/FS posts should only go to that NG.

Now, if someone would propose the creation of a r.r.a.swap NG, following the proper guide-lines, I'd surely vote in favor of such a group.

So Drew - tell us how Bill has contributed to your moral and intellectual decline. For example, tell us what technique Bill uses to "make" you invite folks on the rec.radio.cb NG to operate out-of-band - surely you're not responsible for your actions - it's all Bill's fault, right?

I agree to the words, that many stations uses over 1 KW. But way? Because everyone has it.......Why? Because they sell them. Dont purchase them, and problem will be solved......You will not have needs for 1 KW to talk but a really good antenna........

P.S i dont have HF yet......But i think that i will not need more power than 100W.

The Antiquated Radio Relay League
Newington, Connecticut

June 1, 1998

Mr. Gary Ruark

Heathrow, FL 32746-5063

Dear Mr. Ruark:

Several ARRL members who are also AA members have shredded letters that you have written to them, explaining AA's position with regard to the Sipping Liquor Unusually Slow Hurts (SLUSH) petition to the Federal Flatulation Commission, RM-9267. The SLUSH petition includes a recommendation that the mens and ladies lavatories at ARRL be reallocated. This has our members understandably upset, because these toilets are heavily used by amateur radio operators for post hamfest operations.

Your letter contains several statements that I must question. You state:

in the Balanced Budget Act of 1997, House and Senate convicted felons recognized this need and directed the Federal Flatulation Commission (FCC) and National Methanol and Alchol Administration (NMAA) to consider the allocation of lavatories for shared and exclusive use by private persons. A committee of industry and government agency leaders was established. Called, "Sewage Planning and Policy Advisory Talkers" (SPLAT), this committee made recommendations for the reallocation of some government rest rooms. In cooperation with NMAA, SPLAT developed a plan that included changes to toliets that amateur radio operators now share with the government. The LUSH adopted the SPLAT proposal and the petition includes the SPLAT recommendations.

I must insist that you correct the impression that your letter has left on those to whom it has been sent. As a AA member myself since 1974, I join those from whom you have already heard in requesting that AA represent my interests and disassociate itself from the portion of the LUSH petition that deals with toilets banned.

Hello!

I have connected my FT747GX to the web.
The solution is a java applet and a real audio server, providing both tuning controls and live audio.
The FT747GX can be digitally tuned between 100 kc and 30 Mc in 100 kc steps.

Geographical location is 15 kms south of Stockholm City, Sweden. Aerial: dipole.

Welcome to http://hightech.lindman.com

>riots of six years ago? Funny how "hate crime" was never mentioned in
>connection with that incident.

I note that Reginald Denny was rescued by people in the same neighborhood, who intervened. His incident was also extensively videotaped, and it was called a hate crime at the time. Of course Mr. Denny lived, and is apparently still recovering from his injuries. Not only was the victim in this matter beaten, he was dragged down a road and killed.

Given a choice, I would rather be Mr. Denny, who still has a life and knows that there are at least some people willing to try to act properly.

>Not only was the victim in this matter beaten, he was dragged down
>a road and killed.

The only difference here is that Denny survived his injuries while the black man in Texas was not so lucky. The animals who attacked Denny certainly intended to kill him; this is obvious to anyone who saw the videotape. And by the way, why wasn't that videotape shown nearly as often as the one of Rodney King being subdued by the police? You know, the one which was shown endlessly on television...but with the beginning where King lunges at the police officers conveniently edited out for broadcast.

What exactly was the extent of the punishment given to those who participated in the Denny beating? Not much, if I remember correctly. Were those responsible ever charged with violating Denny's civil rights? Brought up on federal charges? Was the crime ever prosecuted as a "racially motivated" crime?

Moral to be learned here...violent white on black crime is always racially motivated, "hateful" in nature, and violates the victim's civil rights...while black on white crime is simply the result of "oppressed" members of society, venting their frustrations against discrimination, racism, slavery, or whatever. Justice? Not in this country. The perpetrator becomes the victim.

How about you getting a life. pig vomit you are worthless. I heard that you were a sex offender is this true? You better register with the local police. How long did it take you to save up the money for a phone since your move to Paulding county? Are you dialing long distance to get into Bell South now. We all know you you can't get the plastic card to get a real isp.
Whats this I hear that Bellsouth will not allow you to have a web page! You are really a loser! How long will it be before they kick you just like Mindspring, Juno, Redial, Anglefire etc etc etc ...? You are such a loser. All you have to do is put the gun you brag about having, but really aren't supposed to have (drug fellons aren't supposed to have firearmes) in your mouth and pull the trigger. I know its just got to be so hard to be you. I promise you it will not hurt. BOOM! and its over. I know that you must really hate yourself. Nothing you do is any good. You just do the best you can to be negitive to other people so you don't have to look at your trashy self. It has just got to be so hard to be you. Just do the world some justice and stick that gun in your mouth and pull the trigger. It will not be so hard you did say on 75 that you have killed before and you can kill again well pig vomit here is your chance to be a man of your word. Boy if that would be a unnatral act for you to keep your word. JUST PULL THE TRIGGER! I realy feel sorry for you. You print lies about me and other people, I truly feel sorry for you and your trashy little life. I think the best thing you could do is blow your piss ant brians out.
I want you to think about all that I have said here Its all true. I just want you to know that I think that this is the best thing you can do for yourself and the rest of the world. BOOM! Then its over!
What is this that I have heard that your land lord at your new slum residence will not allow you to have a antenna? You told everyone that you owned that place your on. So the truth comes out. So how long will it be before you have to find another slum to live in. Does this place have roaches like your last slum you lived in? pig vomit just blow your brians out. The way I see it is that you are totally hopless worthless a big fat overweight loser.
Thinkabout it its for the best.
Best wishes from
Oris

Second time I have agreed with you. Matter of fact I posted
the same thing a day or two ago.

In my opinion the Federal Gov. is doing more to polarize
the races than anyone from the way they handle things
along these lines.

You may not have heard it on the news but back when the
Rodney stuff was still hot news there was a Hispanic man,
abt 60 .. a little man .. in Florida who went down the alley
behind his house to see if he could help put out a fire at a
cnvience store. Some cop there told him to leave (or maybe
get out of the way). Details were very schetchy but bottom
line the man did not please the cop and ended up dead at the
hands of the cop .. end of story, no more news .. never did
hear about the Hispanics civil rights .. and he ended up dead.

I saw the beginning of the Rodney tape once on our local TV.
Never did see it on Dan Blather, etc. Later I asked a Ham in
Los Angeles area if he saw the beginning. He said at least a
dozen times the first day. After that no more.

Does your newsreader require that you write your comments above the
text you quote? I find it confusing to read answers or commentary
before the question or the subject text. And as a thread develops,
a monotonic flow makes the flow of the discussion easier to follow.

The main benefits are the Radio Shack convenience of local stores and
the fact that they appear to have a very tolerant policy of repairing
equipment which may not have been handled too gently <g>. HT's have a
tough life compared with base station equipment and the cost of the
three year extended warranty is less than the cost of a single repair.

I thought that the U.S. was a free country! In Quebec, we don't have that kind of problem. If your neighbour doesn't like your antenna, he only has to look elsewhere. You could fix some bird houses to the antenna and say it is a support of some kind. Good luck.

Correct. And it's working quite well. If you look closely, you will notice
that our nation is beginning to break up along racial and ethnic lines. The
end result of this will likely be our second Civil War, followed by the carving
up of America into several smaller ethnic nations.

The Samlex supplies are good. THey are very small. I have the 1212 which puts out about 10 amps cont. I used it for over a year with a 10 amp mobil radio. It worked great. I recently ordered the 23 amp model for $80 from Techamerica 1-800-877-0072 Item # 910-3916. Samlex provides a 3 year warranty on it!

I had no noise at all generated with it.

I think its a good product for a good price.

Samlex has a web page.

I think I see the problem with the Code. It is the mindset that people believe that they cannot learn it or that they feel it is a dead end anyway so why learn. A little practice and a good mind set will enable you to do just about anything you want to do. I thought the code was tough but if I wanted to have fun on amateur radio I learned the code. One thing to remember is that there are many aspects of ham radio and even if you don't like or want to do those things you have the privilege not to do them but don't criticize those that do enjoy that part of ham radio.

>
>

Errr. We have not had a civil war yet. A civil war is a war between two factions within a country's population for control of said country. The Confederate States of America had already secceded from the United States of America before the first shot fired at Fort Sumter. It was a war between two sovereign nations... one determined to be independant, and the other determined to subjugate the first and forcibly annex it. The Confederacy had neither need nor desire to conquer the North, any more than the original 13 colonies wanted to conquer England. We call the war begun in 1776 the War of Independence or the American Revolution because the 13 colonies won their freedom and so wrote the book on the matter. The Confederacy lost, and so the Yankees chose a name for the conflict that was, I guess, PC in that day and age: the Civil War. That it was NOT a civil war was an inconvenient fact and so became a non-fact. Had the Confederacy won, that conflict would now be called the Confederate War of Independence.

I still remember old people from my youth who insisted on calling that conflict the War between the States (states as in the two sovereign nations, not states as in the 50 provinces of today that have little real indepencence from the federal gov) and you could really get their hackles up by insisting on calling it a "civil war". I continue that tradition of fact and likewise refer to the invasion and armed conquest of the Confederacy as the War Between the States.

At least the feds didn't demean it further by calling it the "southern rebellion" or such as that.

No sour grapes here... what is done is done. But If there is ever a civil war, it will be the first, and not the second.

4660. Re: HTX-202 Questions

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-12 00:00:00 UTC
From: Zed <gklittle@earthlink.net>
Message-ID: <35816D09.42E6@earthlink.net>
Source record: 170066

I have an HTX-202 and it's great! Get the extended warranty however.
It's worth the cost of one repair.

BTW, it's an Icom design, build under license by Maxon. Usually their
quality is poor, but the HTX-202's quality is high.

Information Resources

As most long-time hams know, the
answer to common technical questions can't usually be
found by looking in the ARRL Handbook for Radio
Amateurs, the ARRL Antenna Book, or one of the many
other atrocious Amateur Radio reference books. In fact,
when you call or write ARRL TIS staff, you will always
be referred to one of these books or to a past magazine
article, which they will offer to send you for a large
sum of money. A few good children's books go a long way
toward answering the vast majority of your questions as
well as enhance your knowledge and enjoyment of this
over priced hobby. QST Magazines are also a superb way
to train your new puppy . An annual index of articles
appears in the December issue of QST and other
magazines, but is so lengthy, you'll commit suicide
before finding what you want. By searching these
indexes, you can usually find an article in two (or
six) hours about not the topic you are interested in,
but in donating your money to ARRL. Most QST indexes
are also missing or out of date on the World Wide Web
at:

ftp://oak.oakland.edu/pub/hamradio/arrl/infoserv/qst/

More QST indexes and a useless,
antiquated search program are available at:

ftp://oak.oakland.edu/pub/hamradio/arrl/bbs/programs/qs
tsearc.z

If you don't have the room in your own bunker for a
large collection of ARRL crap, don't try asking folks
at a local library to see if you can borrow the
magazine you need- they will laugh their skinny
librarian geek asses off ! Instead we will sell it to
you. You may even find that several of these folks have
experience with the same kind of problem or question
that you have!

The ARRL Field Disorganization is also a good resource
for technical confusion ! Each League section has a
Technical Coordinator (TC) and/or one or more Technical
Specialists (TS) who don't know>

Hello,

I am always looking for some nice girls to talk to on the air. Are there any single YL's ages 17-25 anywhere on HF? I can't seem to find them on 2-Meters either.

If anyone knows of any single YL's anywhere in the USA who operate either 2-Meters or HF regularly, please e-mail me with their callsigns. Preferably ones with General Class or higher. I will be willing to travel almost anywhere in the USA to date a girl who is a licensed ham.

My name is Jeff and call is KC8GRP (Livonia, Michigan).
I haven't had a girlfriend in 2 and a half years, and only about 5 dates since my last girlfriend.

I would like to arrange a QSO with any YL in the USA either on phone or CW.

73's,
Jeff

>Its ok all will be over in a few minutes.

Oris, I would be careful here. Due to all the Dr. Kevorkian paranoia of the last few years, several states have enacted laws which may technically make you guilty of "assisting suicide" if he were in fact to do as you suggest.

What difference does it make what people think after reading the pages. They are expressing opinions, nothing more nothing less. Interesting how Carl takes offense at what is obviously Jim's opinions yet screams and hollers like the stuck pig he is when anyone dare accuse his dry white toast page of Anti-ARRL sentiment, anti-DX'ing sentiment, anti-contesting sentiment, anti-anything that does fit his "master race" plan for amateurs sentiment. The standards for Stevenson are set by Stevenson and those that don't fit are invited by Stevenson to to "F**k OFF"

Perhaps the NCI membership will wake up and realize this and then actually call for a vote and ELECT BOD members. I can't imagine a group of people that suddenly announces itself in charge, unless you consider a military dictatorship. BTW, did you hear the one about Stevenson take his Mr. Dinkie and genetically recombining it with some of Idaho's best. Seems he wanted to be a DICK-TATOR!!!! Ha Ha Ha Ha Humro at the pompous putz's expense..I love it

Robinson makes a good point. The QST and various handbooks are
valuable sources of information, albeit a bit hard to use at times. I
have found the antenna handbook to be a valuable resource in the
learning process. I have been a ham for 7 years, and I think that it
is important to support the ARRL. They are our voice in washington,
and the best source of support we have. Perhaps you could send them a
mailing suggesting that they make the improvements you mentioned were
lacking. A newsgroup may make a satisfying place to vent, but it won't
go far toward helping to change a situation that you see as needing
change. I believe that involvement is important in ham radio.

You may contact the ARRL at HQ@ARRL.ORG or go to thier web site at;

HTTP://WWW.ARRL.ORG

By the way, they now have thier handbook on CD-ROM. I imagine this
should make things a bit easier to search, although I haven't tried
it. They also have their own search engine on thier web site; again,
have'nt tried it.

Notes
=====

The abbreviations used in the propagation mode column are:

Tropo Tropospheric
Aurora Auroral
Spor-E Sporadic E
Meteor Meteor scatter
EME Earth-Moon-Earth (Moonbounce)
F2 F2 propagation
TEP Trans-Equatorial Propagation
Au-Es Auroral sporadic E
Iono Ionospheric scatter
FAI Field Aligned Irregularities
Rainsc Rain scatter

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km).

A description of the method used to calculate distances, with C source code,
is available can be downloaded as a 225k Word 6 file from the Internet at

http://www.kirsta.demon.co.uk/radio/dxrechow.doc.

Propagation modes are those reported by the stations concerned. However, it can sometimes be very difficult to distinguish between propagation modes. This is especially so on 50 MHz, where mixed-mode QSOs are common, and to a lesser extent it applies on 144 MHz. The propagation information should be read with this in mind.

Station positions were taken from the best available information, in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.
5. Corner of locator square nearest to QSO partner

Calculated distances may change if better information on station location becomes available.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,

via packet: GM4ANB@GB7EDN.#77.GBR.EU
via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

http://www.kirsta.demon.co.uk/radio/dxrec.htm

>That would nevewr happen here.

What is a "Nazi type party"? I think you are referring to the new nationalist groups who are alarmed at the strain that mass immigration is placing on their economy and society. Germany has not had a problem with immigration except in the last 20 years or so. In fact, immigration was actually encouraged for a while, in the form of "guest workers", mostly from Turkey. Now, however, they are faced with problems that we Americans have grown accustomed to dealing with, being a nation of immigrants. The social order they are accustomed to is strained in ways that your narrow untraveled mind cannot concieve. The anti-immigration sentiment of the last 10 years is understandable, even though the anti-immigrant crime and violence is deplorable. Keep in mind that these acts of violence are not a reflection of the German people as a whole, though. Generally, those I have met are more tolerant of other races and nationalities on a personal basis than most Americans.
>
>"Hitlers Willing Executioners" is a best selling book in guilty Germany.

Odd that I have not seen it yet.
>
>
>> Besides, I think Peter has said that he is not German anyway. Notice the US
>> call... ever think he might be an American? Lots of Aericans over there in
>case
>> you have not noticed.
>
>I noticed he is a southerner. Maybe blacks are his preference to hate?

I am a Southerner, and a loyal Texan. What does that have to do with hating Blacks, or any other race? Do I hate any other race just because of my cultural background? When I first met my ex wife, I thought SHE was Black, or rather part Black, until quite some time after we were engaged. Also... how do you know Peter is not Black? Boy that would be funny if he announced that he was Black after you accusing him of hating Blacks! But you don't know, do you? No. As usual you jump to irrational conclusions. You ASSUME that everybody hates

some race or ethnic group or another. Well, most of us do tend to expect the same behavior out of others as we ourselves engage in. You appear to hate Germans. How many have you met, socialized with, or worked with?
>
>Please visit my World Wide Web Site, you have never seen a page like it.
>You will see:

No thank you. I checked it out once already. Takes to long to load and follow the links around. I can follow the hundreds of links on A6CV's page quicker than I can navigate your page. clean it up a bit. After looking at the naked chick (I had an idea of what I would find, but what the hell... begin at the beginning) I realized I had already wasted over a half hour. When you have streamlined it a bit and put something useful to others up there I would love to check it out.

Boy oh boy are you wrong.
Let me inform you, you poor misgiuded soul. Rich nver paid me a dime I gave him my 20 bucs. Geuss what I pluged the thing in and it worked. Now what I want to know is where are you getting your information. I do think that you are making it up as you go along. I truly know this to be a fact that the filters do work. So I think that you need to look along other lines if you are trying to pin something bad on Mr OTK. The filters work the man ain't pay me a dime to say anything. The one thing that I don't understand that is when someone does something good for the advancment of the hobby you stumpjumper clowns have to get in here and do your best to destroy it. You guys are so self centered. Belive me the filters do work.

Jim:

I have taken your advice and checked out your fine web page,
and particularly enjoyed the fair and unbiased coverage you
provided regarding NCI and their illustrious Board of Direktors.

Your web site, particularly the Code and NCI links, should
be required reading for all hams! Keep up the good work!

4684. 3950 Schedule of Events

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-13 00:00:00 UTC
From: "Lloyd, N0VFP" <davies.lloyd@mcleodusa.net>
Message-ID: <6lv2fh$12s88@odie.mcleod.net>

This was posted earlier by someone else, thought I'd repost it

TONIGHT'S 3950 SCHEDULE OF EVENTS

Here's a preview of tonight's scheduled events on
3950 khz (LSB). All times are approximate.

1. 0000 UT (8 pm edt): After verifying that 3950 is
clear, a few of the regular Liberty Net members
will begin a QSO. There may be a few guest
appearances (jamming) by WA9KJI.

2. 0100 UT (9 pm edt): W9ART will jam 3950 with
rock music and repeating "blah blah blah
blah blah blah blah blah blah blah blah".

3. 0130 UT (9:30 pm edt): Using W9ART's jamming as a
smoke screen, KK7HO will start a QSO with one or
more of his butt-buddies out west, thus giving us
yet another week's worth of KK7HO newsgroup postings
whining about the Liberty Net moving in on his
supposed "existing QSO". NEVER MIND the fact that
the ONLY reason KK7HO and company start these so-called
"QSOs" over EXISTING QSOs is to try and stop the
Liberty Net.

4. 0200 UT (10 pm edt): The Liberty Net begins, and lasts
at least until 0600 UT (2 am edt). All the while, the
Liberty Net is jammed by a half-dozen or so cretins.
K5BLB will be the most tenacious jammer. Sid will use
various musical selections, white noise tape loops,
various noise makers, strange mouth and farting
noises, and vile, sexually-suggestive language.
Sid will keep using the terms "Nazis", "faggots",
"suck", "crotch", "homo", "penis", "balls", and many
more that I won't repeat here. Sid will make some
claim about being "The Strongest Station In The Nation".
At first, that claim seems laughable (since his signal
is no better than average) until you realize that he is
talking about SMELL, not SIGNAL STRENGTH. Besides K5BLB,
jamming attempts will be made by the usual suspects, i.e.
KK7HO, W9ART, WB0CXJ, possibly WA9KJI, and others who
don't give their callsigns.
Meanwhile, useful information and interesting discussions
will take place on the Liberty Net, showing all who

listen just WHO are the reasonable, intelligent,
civilized amateur radio operators, and WHO are the jamming,
law-breaking, filthy-mouthed, jealous, radio PUNKS.
*** There MAY be some guest apperances by K5ZU, who will
perform his comedy routine, but we have not been able
to confirm this due to K5ZU's erratic and unpredictable
schedule which is entirely dependent on the availability
of certain chemicals.

4685. Re: Info on MFJ morse code tutors

Several members of our club, myself included, bought the MFJ 418. I like
the display as much as anything about it. It makes it very easy to use.
The unit has all the features that a computer program does. And, as
you said, it is portable. I would say just buy it.

I need an AZDEN PCS-3000 manual and schematics, I traded my radio and somehow misplaced the manual and schematics I have. If you can help with a copy of yours or if you have an old one lying around I'd be more than happy to pay for copying and postage.

Thanks. Bob Lott KC7OSZ

Well, since I know of nobody in this newsgroup (sans Lennie No-Calls)
who was even alive during that time period, I would have to suspect
that a group of people got together, held a meeting, formed by-laws,
and elected their Board members. Not too unlike what most new
corporations do today.

Compare this to No-Credibility International, where a hunta of
military dictators got together, appointed themselves "the Board"
(indefinitely, I might add), and now "run" the organization.

Oh, want to know when the next election will be? Want to recall a
Board officer? Gee, sorry, can't do that -- no by-laws.

The Twin Cities Club would like to announce the first Annual Minnesota QSO Quest, which will be held 06-07 February 1999. This is a 12 hour HF/VHF contest, 160m-10m & 6m, CW/SSB. The MN QSO Quest includes 4 MN operating classes (including a Novice/Tech class), 3 operating classes for the rest of the US & Canada, & even 2 DX classes, which is a little bit different from most QSO parties- hopefully this will make the MN QSO Quest an international event.

All MN counties are multipliers in this contest. MN stations can work MN counties, & the other 49 states & 12 Canadian provinces for multipliers, the rest of the world works Minnesota counties for multipliers.

Plaques & amateur radio related prizes will be awarded to all first place finishers in all classes.

A complete set of rules & the multiplier list with the two letter abrreviations for MN counties can be found at the MN QSO Quest website:

http://www.rossiya.net/mnqso.htm

If you've found the official mascot of the MN QSO Quest, Lars the soon-to-be lutefisk, you have reached the right place on the Internet.

You may also contact either the TCFMC or myself via email from the website. Hope to see you on the air in February 1999 when Minnesota 'works the world!'

If you wish to email me, please remove the letters "cq" from the start
of my email. (I put the letters "cq" so that the automatic email SPAM
programs will get the wrong address.) :-)

If you're willing to work at learning the code, spend the extra money
and get the highest model WITH the built-in LCD. It also has a user
defined character set that is VERY helpful.

What follows is an un-edited section from an article I'm writing for
my Ham radio club news letter. You'll find how I found the MFJ
Pocket Code Tutor useful for learning the code to pass both the
5 WPM test and the 13 WPM test. By the way, I just passed my
Advanced Class test today.

73,
Bob
KF6JHG (Soon to be KQ6W?)

WHAT WORKED AND DIDNï¿½T WORK FOR ME:

When I started to learn the code, I used a public domain computer
program a friend gave me. My friend also told me, ï¿½You have to push

yourself hard.ï¿½ This system didnï¿½t work for 2 reasons: First, almost every night my son was using the computer for his homework; which limited my time practicing on the code. Second, my brain went into mental overload when I tried to learn too many things too quickly.

In order to overcome the first problem, I recorded my own code tapes from the computer. This was great, except that the type of tape I recorded wasnï¿½t the best for learning code. For example, ï¿½A .- A .- A .- N -. N -. N -.ï¿½ Not only did the tape put my brain to sleep, but when it came time to try and copy, I couldnï¿½t do it. The problem was that I failed to practice copying random letters.

I might of given up at that point, but one ham, Wally (KF6APH), kept coming on a local 2 meter repeater telling everyone about how great 10 meters was and how he had made all these contacts to South America. If I could just pass the 5 WPM, I too could be making all those GREAT contacts.

After some thinking, I purchased the MFJ Pocket Code Tutor with the build in display. The 2 things I found VERY helpful with this unit were its small size made it easy for me to take it everywhere and the User Defined Character Set.

Every day at work, Iï¿½d eat my lunch in about 1/2 an hour, leaving about another 1/2 an hour to practice the code. At night I gave up watching several TV shows, run off to a quiet room and practice the code. By sticking to my plan, I was able to find the time to practice the code.

Using the MFJï¿½s Used Defined Character Set, I entered the letters that I knew from their letter set #1. The unit was set for Fransworth 18 WPM speed and the spacing was at 5 WPM. After working at 5 WPM, I increased the rate once I felt I could copy at a given speed. I chose 10 WPM as the maximum rate to practice for a given set. Once I felt comfortable with that set at 10 WPM, Iï¿½d add one new letter to the set and drop the speed back to 5 WPM. This way I only had to learn just 1 new letter at a time.

After having learned the first set, I moved on to the second set of letters. I cleared out the memory to the User Defined Character Set and put in the first 2 letters I needed to learn from the next letter set. I found out latter, it wasnï¿½t a good idea to try to do it that way.

In a short time, I thought I had learned all the letters to the second set. After all, I could copy all the letters from the first set at 10 WPM, then copy all the letters from the second set at 10 WPM. However when I combined BOTH sets, I learned that I couldnï¿½t even copy both at 5 WPM. Somehow my brain had created some sort of mental short cut that couldnï¿½t handle everything at once!

In order to overcome this mental shortcut, I had to enter all the letters from the first letter set into the User Defined Memory. Next I added the first letter from the second set. I practiced until I could reach 10 WPM, then went back to 5 WPM and added another letter. Once I

had combined all the letters, I was ready to move on to the third set.

I would have just added each letter from the third set, but there was a problem. The User Defined Character Set was limited to a maximum of 16 characters. In order to overcome that limit, I could add each letter from the third set, and when I ran out of room, I would replace the easy letters from sets 1 and 2 with the new letters on the third set. While that was less than ideal, it wasnï¿½t too hard to combine the first 3 sets and work to 10 WPM.

At first I thought Iï¿½d learn all the characters at 10 WPM in just 3 or 4 months. However, as I learned new characters, my progress seemed to slow down. It was taking longer and longer to learn a new character.

It was when I had learned all the letters in the fourth letter set and tried to add the letters from the third and second letter set did I really have problems. Somehow it was as if I had hit a brick wall, I made no progress for 2 1/2 weeks. After seeing that I wasnï¿½t making progress, I had felt that there was no way Iï¿½d ever learn. I was ready to give up and join No Code International. It was at this low point that several hams encouraged me to keep working at it. They were right, in any long learning process, there are always plateaus. If you hit a brick wall, just keep working at it. It may take several weeks, but in time you will move on.

Once I had learned all the letters, I worked like crazy practicing copying random words. The MFJ Pocket Code Tutor has a vocabulary of 500 common words. I wanted to make sure that I knew all the letters very well before I moved onto the numbers. The extra time spent working on all the letters made combining the numbers with the letters a little easier. I practiced both letters and number using the Random Callsign mode in the Code Tutor.

As the day of the 5 WPM code test approached, I could do the letters and numbers very well, but I had only started to learn the other characters. I took the test and passed. Not only did I get 9 out of 10 questions correct but I also got my 1 minute of perfect copy.

Still, the 5 WPM test was more of a practice run. What I really wanted to pass was 13 WPM test. However after passing the 5 WPM test, I started to slack off in practicing the code. So for about 1 month, I didnï¿½t practice as much as I should have.

Realizing that Iï¿½d never pass the 13 WPM if I didnï¿½t practice, I did my best to increase the time I practiced from about 1/2 an hour per day to 1 hour per day. I started by putting every letter I was having problems with, in the User Defined Character Set. I kept working on all my problem letters until they became second nature. My problem was, that at 5 WPM, I could think about what a given letter was, but at 13 WPM, there was no time to think.

Once I had all the problem letters out of the way, it was easy to copy random words at 15 WPM. Next I worked on the numbers. After some

practice, I could copy random numbers at 20 WPM. I felt very good about it, until I tried to copy random letters AND numbers at 13 WPM. Once again, my brain had used some sort of mental short cut to copy the code.

What I really needed wasnï¿½t offered on the Pocket Code Tutor. I needed a User Defined Character set that was bigger than 16 characters. In order to overcome this limit, I had to put the letters and numbers into groups that appeared to be common. For example, ï¿½3ï¿½ had and ending like ï¿½Wï¿½, ï¿½Zï¿½ and ï¿½7ï¿½ were also very close too.

I spent weeks working on ï¿½problemï¿½ combinations. I start with just the characters ï¿½3ï¿½ and ï¿½Wï¿½. Then Iï¿½d practice until I could copy very well between the two. Then Iï¿½d add 2 more characters, like ï¿½Zï¿½ and ï¿½7ï¿½. When I would fill the User Defined Character Set with the first set of problem combinations, I clear out the memory and work on another set.

After that, I worked on random callsigns. While many of my Ham Friends told me that I should be able to do 15 WPM, so that the 13 WPM of the test will sound slow, I ran out of time. My club does the testing once every 2 months, thus if I waited until I was up to 15 WPM, that would be a wait of 2 more months. There were other clubs in my area where I could have taken the test, but I really wanted to be there with the people I knew.

When the day of the test came, I really didnï¿½t feel ready. I was really pushing myself to make the 13 WPM. My Ham friends all told me, ï¿½Donï¿½t worry, the worst you could do is fail!ï¿½ Still it was hard for me to keep from being nervous.

The written test for General was very easy; I passed that with no problems. However when I started with the 1 minute warm-up for the code test, I blanked out after about 30 seconds. That was not a good sign. When it came time for the code test, I copied OK for a while then would drop some letters, copy more, and drop some more. One key thing in taking the test is to NEVER try and think about what you missed. The more time you spend thinking, the more additional letters youï¿½re likely to drop.

After the 5 minutes ended, I first thought that I had failed the test. However, after looking at what I had copied, I saw that all the information was there. The real problem was that I was so focused on trying to copy, that I couldnï¿½t read at the same time. In the end, I believe got 9 out of the 10 questions correct.

I now have a General Class License and plan to upgrade soon to Advanced Class. As for the total number of days of practice getting to that point, Iï¿½d say it was about 237 days. Was it hard work ? Well, that all depends on your point of view. If your count the total number of days and hours I had to practice and consider the large amount of time required as ï¿½hard workï¿½, well, then you could say it was hard work. If you look at the amount of effort required at each practice session, well I never considered it ï¿½hard workï¿½. In a way, I considered it a

challenge, not an impossible or unpleasant task.

When I had a chance to help work at the LA Marathon, there was one runner Iï¿½ll never forget. He was not the fastest or the strongest runner. He was a very old man that ï¿½ranï¿½ at a little more than walking speed. While he was close to being the last place runner, the look of commitment and dedication was written on his face. It didnï¿½t matter how old he was or that he was close to last place, he was going to cross the finish line. In the same way, learning code thereï¿½s a strong commitment. It shouldnï¿½t matter how slowly you seem to learn it or if takes you months and months, you need to keep working at it. In the end, youï¿½ll be able to say to your self, ï¿½While others gave up, I kept at it and passed the test.ï¿½ Nothing will ever match the pure pleasure of having really earned the reward of the higher class license.

4694. Open letter to Herr Lemken

Achtung Herr Lemken !

The United States of America sends its greetings and salutations to the German people. Heil der bundeschtag !

Might I inform you that Mr. Fisher refers, I believe, to one John Fitzgerald Kennedy, whom many here believe unjustly won the election to office with a lower popular vote than his antagaonist.

Mr. Fisher makes points which are valid as do you Herr Lemken. I hope that the Austrian people will look upon it with favour that Mr Fisher's own daughter, a fellow amateur (Master Lipshek may wish to take note), travelled the German countryside just recently. Mr Fisher showed himself to be the true embodiment of a gentleman and country squire, by allowing this perilous journey to a foreign land. We can see he puts his political agenda to the aft of his daughter's education. He is to be commended.

Herr Lemken, I was in Berlin the day the wall came down and a joyous day it was.

I am your eternally modest servant and most humble guardian of German unity and NATO membership,

Raul Bloodworth, esq.

>the shack should primarily be the best antenna that you can
>afford......wether its a tall long wire or a $85,000 tower rig.

While I certainly agree that a good antenna is important, realize that going
from 100 watts to 1.5 kW gives you a 11.76 db signal boost. Unless you are
VOA, you probably can't erect an antenna on lower HF with comparable
gain. And you certainly can't at a cost comparable to a 1.5 kW amp.

Because receivers are atmospheric noise limited on HF, a bigger antenna
doesn't automatically mean you'll be able to copy more stations. Signal
and noise are both boosted by the larger antenna, so SNR may not
improve at all by going to a larger antenna. This may seem to deny
recprocity, but it doesn't. It is just a fact in situations where atmospheric
noise, and not internal receiver noise, sets SNR.

Highly directional antennas are a different story in that they can suppress noise
from unwanted directions, thus improving SNR, but directional transmit/receive
antennas at lower HF are *big*. A small rotatable shielded loop can be useful as
a directional receiving antenna on lower HF, but won't do for transmit because
it will be very inefficient (we don't care about that on receive since our receivers
have plenty of gain to make up for the inefficiency, remember, internal receiver
noise is not the limiting factor on lower HF).

So it may be to your advantage to run an amp on lower HF into a smaller,
simpler, cheaper transmitting antenna rather than attempting to erect a
large array (which may be infeasible anyway due to the amount of property
it would require). And you may want to invest in a separate small directional
loop for receiving (or string a series of Beverage antennas for receive).

Things aren't so simple on lower HF. Big antennas aren't always a better,
or even a possible, answer. Just trying to bring some perspective to this
kW bashing orgy.

>http://www.tentec.com

More than just the band modules are extra cost options. Things like a
noise blanker costs extra too. And the AFC system used to keep the
analog VFO on frequency causes it to take discrete frequency hops
at unnerving intervals. That's death for data operation, and annoying
for SSB and CW operating.

When you total up the extra cost options you need to bring it up to the
equivalent of a Japanese HF rig, and when you factor in the operating
drawbacks, I don't see how you can choose this radio over one of the
lower end Japanese units such as the DX70TH. And it certainly can't
compare to a used higher end Japanese (or TenTec) radio. When you
can get an IC735 (or a Corsair II) for under $600, the Scout just doesn't
measure up.

I think TenTec missed the mark with this radio. A lower end American
made radio isn't a bad idea. But it needs to be comparable to the lower
end Asian competition, and the Scout isn't. They'd have done better by
attempting to value engineer the Corsair II. Plug in coils went out in the
1950s.

The warranty covers the battery. Batteries do wear out with use,
and one new battery recoups the cost of the warranty. RS is also
very liberal with their warranty policy. If you break the radio through
abuse, they still fix it under the extended warranty. Consider it an
insurance policy.

>conveniently edited out for broadcast.

First of all, the videotape doesn't show King lunging at anyone. Second, as was admitted, the beating and treatment of the suspect was against police department policy. Third, can't you stay on the same topic without bringing in extraneous material.

Reginald Denny was rescued. Unless you're using the term animal to refer to all human beings, I remind you that those who mistreated Mr. Denny were human. Of course, somehow nobody noticed a man being dragged down a road for at least two miles in Texas. I note that this behavior isn't described by you as animalistic. Your statements reveal your true intent. Can you truthfully claim that Mr. Denny's life is worse than the chap who was killed in Texas? Can you truthfully claim that the Sheriff for Jasper Texas doesn't claim that the victim in Jasper Texas was severely beaten before being dragged? In other words you can't debate and stay on topic, can't use logic, and further apparently don't read newspapers.

Absolutely *HYSTERICAL* !!!!!!! I wondered about that (country of
Origin for the Puch) some time ago when I looked at his schizophrenic
web page, however I was unable to tell for sure where it was from.

I find it *absolutely* *HYSTERICAL* that it's from Hitler's homeland
and in all his radiant ignorance Burp places it on his web page.

This *has* to exceed Burp's prior *major* blunder where (our hero
Electronics teacher) posted a challenge to the average "dumb ham"
about a transistor circuit and Burp got it wrong

The magical quality is a license to use HF frequencies. Even a Tech
Plus or Novice holder obtains some HF voice frequencies. Those who
don't pass that 5 wpm blaze of speed obtain VHF/UHF licenses.

> As for "fun", I do plenty of tough things that I think are fun. I do
> however, reserve the right to pick which tough things to waste my time on.

That's fine. You shouldn't claim some kind of discrimination if you
don't bother to learn enough Morse to qualify for an HF license though.

Dear Burt,
I will continue to express my concern that you have not yet sought help for your condition. These periods of hallucination you experience will not go away on their own and you must seek guidance before it is too late.
Please ask someone to drive you to the nearest facility and check yourself in, if not for your own benefit, at least for the sake of your long suffering family. They deserve you at your best and need you for the long term.
There are many programs that will help for little or no payment, so it shouldn't be a financial burden. Even at that, perhaps your fellow hams would be generous and help you out.
I know you mean well, but your continued posting of the same messages over and over mean that you have lost your ability to say meaningful things and you need "Expert" help, not the advice you are receiving from your ham friends, well meaning though they are.
I wish you continued success in your career as a small town community college instructor and only hope that your condition does not adversely effect your position there.
Wishing you the best.

Which part of Jim's NCI web page is a "lie"? Which part is "unsubstantiated"?

Your postings? The ones retrieved from DejaNews? But, oh yes, I forgot --
Dejanews is part of the big conspiracy against you.

I've asked one simple question a dozen times, and you have YET to answer
it. That question is:

Did the membership of NCI actually ELECT you to your position as
a Board member, or did you appoint yourself -- and, if the MEMBERSHIP
of NCI decides they don't like the way you represent THEM, what are
the procedures for them to recall you from your Board seat?

According to e-mail I have received from long-time NCI members, you just
popped up one day proclaiming to be an NCI Board member. No NCI member
was ever given the opportunity to vote on your appointment.

So much for a "democratic" organization, eh?

>NCI as an organization acts with integrity and neither I nor
>any of the members of its board have to answer to or justify
>ourselves to you.

I guess we should actually read this to say:

NCI as an organization acts with integrity and neither I nor
any of the members of its board have to answer to or justify
ourselves to anyone in ham radio.

In other words, what you are basically saying is that members of the
amateur radio community should just shut up and take what you are doing
at face value as having "integrity", and gosh-darn, you don't have to
justify what you are doing, dammit!

Regardless of whether or not you happen to like Jim personally is
irrelevant. NCI is an organization that represents an subset of amateurs
with a common interest. *ANY* amateur radio operator has the privilege --
no, the OBLIGATION -- to question what s/he feels are inconsistancies
in the information you present. As an organization that purports to
represent the amateur communication, YOUR obligation is to justify

yourself and what you are doing to *US*.

Your unwillingness to address even the simple questions I have put forth shows that NCI -- and specifically YOU -- do NOT "act with integrity" as you so claim. Furthermore, the complacency of your fellow Board members in matters such as these further calls into question THEIR integrity.

>All one has to do is read the REST of your rants about no-coders,
>techs, etc. to see how "balanced" and "objective" YOU are.

To see how well "balanced" and "objective" YOU are, all one has to do is visit DejaNews and pull up some of your previous postings. Parents with small children nearby had better not, though, because they read like an R-rated movie.

Are you referring to the Kenwood TS-850? If so, it has to be more than 2 years old. The rig has been out of production for years.

In article <1998061305265600.BAA04150@ladder01.news.aol.com>, n8blk@aol.com (N8BLK) writes:

>First of all, the videotape doesn't show King lunging at anyone.

Then you have not seen the entire videotape. You are a victim of the propaganda spewed forth by our politically-correct, anti-white, liberal news media. Again, when the tape was first shown, it clearly depicted King getting out of his car with his fists held up in a boxing stance, lunging at the police. THEN the police counterattacked and began subduing him. The first part of the tape was quickly edited out and future broadcasts only showed the latter portion where it then appeared that the police were engaging in an unprovoked attack on King. This is a fact. Don't believe me? Ask around.

>Second,
>as was admitted, the beating and treatment of the suspect was against
>police department policy. Third, can't you stay on the same topic without
>bringing in extraneous material.

Typical liberal BS. Let's second-guess the police department and tell them how to do their job. "Oh, sure, they were dealing with a convicted felon who had a history of violent behavior, dangerous activity, and narcotics abuse. But gee, they didn't follow official police department policy. Nevermind the suspect; let's put the police department on trial."

>Reginald Denny was rescued. Unless you're using the term animal
>to refer to all human beings, I remind you that those who mistreated
>Mr. Denny were human.

No, they were animals. Human beings do not savagely beat each other to the point of near-death. This is why those who commit heinous crimes such as this should not be afforded any "rights." Animals do not have rights. When you act in a manner such as this, you forfeit any such "rights" you may have.

>Of course, somehow nobody noticed a
>man being dragged down a road for at least two miles in Texas.
>I note that this behavior isn't described by you as animalistic.

Of course it is! No less so than the Denny incident. But no more heinous, either. This is my point: that the perpetrators here are being treated differently because of the color of their skin. Again, where was the outcry of "civil rights violations", "hate crime", and "racially-motivated" during the Denny incident? There were none. Just as if the races of those involved here were reversed...if it was a white man who had been dragged behind a truck by black men...I'll bet you wouldn't hear a peep out of Janet Reno about the

incident.

>Your
>statements reveal your true intent. Can you truthfully claim that Mr.
>Denny's life is worse than the chap who was killed in Texas?

Yes. The man in Texas has gone on to a much better place. Denny, meanwhile, is scarred for life. He will never heal completely and never be the same, either physically or emotionally.

> Can
>you truthfully claim that the Sheriff for Jasper Texas doesn't claim
>that the victim in Jasper Texas was severely beaten before being
>dragged?

What does this have to do with anything? Yes, the sheriff has already stated that, in his opinion, the victim was beaten first and then dragged. But again, what does this have to do with the debate at hand?

> In other words you can't debate and stay on topic,
>can't use logic, and further apparently don't read newspapers.

????

> To N1QQ,

Ive been watching you trash the FT1000MP for a while now. Have you noticed
that NOONE else has indicated a similar problem? Did it ever occur to you
the YOU may have a antenna problem? Hey here is a novel idea. Put up a
resonate 40 meter dipole. In case you dont know try 468/7.175 then trim
until the swr is where you want it, on the frequency you desire. Oh yeah,
use 50 ohm coax. The 70 ohm stuff is for a "free space" system....that doesnt
exist in reality. Dan/W4NTI (not a vanity call)

This is true. The entire tape was never played very much on national media. I only saw the first part once during all that ruckus.

Nevertheless, I think he was properly subdued long before the cops quit beating him. As usual, everybody concerned shared some of the blame for that incident. King was uncooperative at first, and so should have expected a few lumps. The cops got carried away, and delivered more than those few.

While I am on this thread, I would like to point something out about Reginald Denny that has not been pointed out in the posts I have read. This does NOT excuse the actions of the crowd, but it does represent a warning of what NOT to do in this situation. Denny, frustrated at being blocked, and probably taunted and harrassed by the crowd, gave back as good as he got. He repeatedly delivered a certain ancient Anglo-Saxon gesture involving the middle finger. Surrounded by an angry mob, what intelligent man would seek to further enrage a rioting mob? Sheesh. No, Denny did not deserve his treatment. His beating was definitely, IMHO, classifiable as a hate crime. I honestly believe that if he had been black, he would not have been subjected to the fury of the mob. And had he not flipped off the crowd, he might have still got the crap beat out of him. That mob was not behaving in a rational manner at all. Still, Denny's initial response was pretty damn dumb. I believe he was unarmed, too. I think I would have just sat there grinning and waving as long as possible, myself, being very careful to extend all fingers and not just the center one. Discretion the better part of valor in that situation. Denny just had to make his point. I respect that, in a way, but it was not in keeping with a sound instinct of preservation. Kids, don't try that at home.

All the Dennys and Kings out there, listen up and listen well. Do not escalate a confrontation that you are certain to lose, whether with the police or a mob looking for a victim. Token defiance won't help make friends and influence people.

Frankly, If I were Denny, I think I would have backed right out of there and to hell with anybody in the way. He was obviously in a very dangerous life-threatening situation. I don''t think it was restraint that stopped him from doing this, nor conscience at the thought of harming rioters. I think he was just plain stupid. If I were King, I definitely would have just done what the nice officers said and been very very cooperative. You don't fight that many cops and come up winners.

Well, if your finger smelled that bad, maybe your aim was a little low. similar escapades left me sniffing my finger for hours afterwards, and I never had one that I thought stank.

Seriously, RM "A" school used to be a pretty tough course of study.(Not any more, though... those few who do learn Morse Code go to another school and get a special NEC. Also the ETs do all the troubleshooting and repair more involved than a blown fuse) I wouldn't belittle the accomplishment of completing it unless you have completed it as well under the same circumstances.

I would like to take this oportunity to renew my pledge of $5 towards Burt's
treatment, with an additional $5 to help pay for any ncessary electro-shock
therapy. Come on, hams... let's help this fellow ham!

Burt, I am in Germany about 6 times a year. I would be surprised if there are
not more Nazis in Massachusetts than in Germany. I know of one hateful old
troll on Cape Cod who would make a good one if not for an accident of birth
that left him in a racial group not generally well thought of by Nazis.

Germany today is no more responsible for the actions of Hitler and his cronies
than for those of the Kaiser. Sorry... most of us don't buy that "sins of the
father" crap. Do you take responsibility for invading and murdering all those
poor Philistines 4000 or however many years ago? Give it a break already.
Besides, I think Peter has said that he is not German anyway. Notice the US
call... ever think he might be an American? Lots of Aericans over there in case
you have not noticed.

What about the Petition of Right in 1628 and the Bill of Rights in
1689? After reading these two documents, I am convinced that the
American Revolutionists used their phrasology and influence when
writing our own Constitution and Bill of Rights. These two English
documents make very interesting reading if you like history, as I do.

Oh, yea...how much for the Magna Carta?? :)

It is my understaning the FCC is in the process of investigating this ham radio "thug".IRS is also looking into possible tax evasion also. And don't forget Duval County Florida has several warrants for his arrest. I guess his flim-flam and qrm'ing days are about over.The ham bands will be better off with him gone.

Marty,

Only you & your Neo-Nazi BARF buddies believe
this crap! The more you publish lies and libel
Whiten, the more his business grows. Enough of
Whiten's filters have been sold and talked up on
frequencies you don't even know about, that IF
they were defective, there would be literally
thousands of hams posting this on the internet
and talking it up on ham radio.

The fact is Marty & Jimmy, that you are eat up
with envy. While Whiten laughs all the way to
the bank, you sit there in front of your monitors,
being consumed more & more with your hate.

GET A FUCKIN' LIFE!

> These filters truly work!

It is a well known fact in ham radio that Richard Whiten,of Easeley,S.C.

is a common scam artist.How was he able to sell these fake devices
without
a business liscense? And not pay state and federal taxes on this revenue

either. As you can see by the attatched jpegs,he is also wanted in Duval

county Florida on a myriad of bad check charges.He fled the state to
avoid
prosecution,which is also a felony.He has violated hundreds of FCC rules

involving amateur radio as well. But he continues to avoid prosecution.
Why?

In order to "get under my skin", you have to have some credibility.
You have none. I challenged you to meet and you fell to that one.
I met you on the air and you kissed my ass whereas here you are
oh so tough.

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. A naked chic
2. An actual picture of Burt on the throne.
3. The writings of me and others on ham radio, hear a typical ham contact.
4. The warm side of K1OIK, hear me speak, see me with famous people.
5. A test for your SVGA monitor
6. Pictures of me and my family.
7. A Nazi connection in ham radio?
8. See now the future of ham radio.

Hey all you swell guys,

Geta load of this: If you want a nice vintage movie that covers ham radio check out "Everyone Hobby" from 1938. It was on TCM (Turners Classic Movies) a couple of years back. Probably 50% of the movie involves ham radio, with lots of neat footage of old transmitters and receivers. The movie is only one hour long, but truely worth watching. I pull that tape out at least twice a year and watch it! The best part is when the newly licensed young ham (one of the stars of the movie) is walking out of the radio store with his new three foot high rack transmitter (semi-portable no less) and he has a little tiff with his girl friend who is passing by.Store owner after girl walks away: Wasn't that your girl friend?

Our Star to Radio Store Owner: Girls and Radios just don't mix!Store Owner: Yeah, ham radio has that affect on a fella

What a bunch of dweeebs! Lovingly...WIdElOaD

Thank you Curtis. Is it your agreement that makes KH2D's post, "the way it is?" After the Navy issued you the Morse Code in C school, did they remove your ability to reason? I don't think you ever learned empathy. It is sooo easy to say things are "the way it is" when you do not have to make a personal effort to get your amateur license. Meanwhile, the rest of us struggle to learn the code without the incentive of basic pay, quarters, and rations, or the threat of UCMJ action. Yessiree, you did it the good old fashioned way. I know KH2D, and believe me, that is not "the way it is!" Sorry Jim (that's just the way it is).

For 40-50 MHz and decent performance elsewhere,
Radio Schloque's #20-014 is probably the best.

Our radio shop has under gone a few changes and is updateing some of
the shops test equipment. We have the following test equipment for sale.

(1) Tekronics 150 MHz 4 channel scope Model 2445A,
asking price is $1,700 in Canadian funds or $1,100
in US funds.

(2) IFR service monitor model 1000, asking $2,000 in
Canadian funds or $1,250 in US funds.

(3) Marconi automatic distortion analyzer, this is only 2 years old
and I think we paid about $3,000 for this unit. Asking $950.00
in Canadian funds.

All the equipment listed are in very good working order, and clean and
look good, as all this equipment has been cared for and maintained.

FS: Sams Photofacts $1.50/SET or less.
The following Sams SETS are available for ONLY $1.50 PER SET (per SET, not per FOLDER) while supply lasts. 50 OR MORE SETS $1.00 PER SET if ordered at same time to same address. All prices + S&H from Baltimore, Md.
. I recently got a new batch in & these are ones that I already have at least 2 complete sets of so I just want to move them fast.
Folllowing SETS are available: 135, 138, 201, 227, 269, 275, 290, 291, 295, 296, 297, 300, 301, 304, 312, 320, 325., 343, 344, 356, 362, 370, 383, 387, 388, 389, 392, 394, 395, 396, 424, 434, 435, 456, 481, 485, 500, 504, 509, 530, 335, 558, 578, 580, 590, 596, 605, 612, 618, 630, 635, 643, 647, 649, 650, 656, 658, 660, 686, 688, 695, 704, 719, 722, 723, 739, 746, 774, 778.
Available at these prices only while supply lasts.
For a list of other available Sams numbers + TSM's, AR's & other manuals visit my web site at
http://www.vintage-electronics.com
& click on "Schematics" . You'll also find vintage radios, audio, test equip, comm gear, etc at the site.
Thanks
John

>discharge. But that's not a good assumption.

Indeed it isn't. The amp hour rating of Nicads is usually for the 10 hour discharge rate (though some are given at the 20 hour rate). If you discharge at the 1 hour rate, you get less energy out of the battery (internal resistance rises at high discharge rates). At 5 watts, you're discharging faster than even the 1 hour rate, so losses are even higher. Rapid discharge can cut ultimate available capacity by half, or even worse. This is partially dependent on cell manufacturing factors and will vary from one battery manufacturer to another depending on the exact chemistry and construction they use for their cells.

And you have to stop discharge when the terminal voltage falls to 10 volts (for a 12 volt Nicad pack) or you run the risk of reversing a cell and destroying the pack. The latter factor limits you to about 70% to 80% of rated capacity even if you discharge at the 10 hour rate.

Battery temperature is also an important factor. At low temperatures, the available capacity decreases sharply because the chemical reaction rates halve for each 10 degree Celsus drop in temperature. At high temperatures, internal resistance increases, also reducing available capacity. Battery rated capacity is given for a cell temperature of 25 degrees Celsus (roughly room temperature). Heavy discharge causes cell temperature to rise, so the longer you try to draw heavy current, the worse cell efficiency becomes.

In HT service, battery life is estimated on a 10% transmit 90% receive duty cycle. This tends to reduce recombination losses in the battery chemistry dramatically from a straight 100% transmit duty cycle, and allows cell temperature to recover. Even so, HT manufacturers seem to routinely quote operating times which are unrealistic.

And note that as a battery ages, its internal resistance rises, and its available capacity decreases due to irreversable chemical changes. After about 500 to 800 complete charge discharge cycles, the irreversable chemical changes leave you with virtually no available capacity. At that point, the battery has reached the end of its usable life.

Partial charge discharge cycles cause fewer irreversable changes, so you can get many more partial cycles out of a battery than full cycles. Thus it is foolish to use a charger which fully discharges a battery before recharging it. You're shortening the life of the battery unnecessarily. A large mythos has grown up about Nicad "memory", and lots of people use "conditioners" which are unnecessarily reducing the life of their batteries as a result.

Don't fall for this. True Nicad memory is extremely rare and requires very special operating conditions to generate. You'll never see it in HT service. What you may see is "voltage depression". This condition may appear to mimic Nicad "memory", but it is the result of *overcharging* the battery. Use a charger which properly senses when a battery is fully charged and *shuts off* at that point. That will prevent voltage depression and extend the lifetime of your batteries.

Each battery manufacturer has test data sheets which quantify the performance you should expect from their products. It isn't a simple linear function. There is no equation you can use. You have to interpolate charts and factor in the various operating parameters to determine how long the battery should last in a particular service. For heavy discharge service, the actual available energy will be considerably less than the amp hour rating of the pack would indicate.

Dear Burt,

I will continue to express my concern that you have not yet sought help for your condition. These periods of hallucination you experience will not go away on their own and you must seek guidance before it is too late.

Please ask someone to drive you to the nearest facility and check your-self in, if not for your own benefit, at least for the sake of your long suffering family. They deserve you at your best and need you for the long term.

There are many programs that will help for little or no payment, so it shouldn't be a financial burden. Even at that, perhaps your fellow hams would be generous and help you out.

I know you mean well, but your continued posting of the same messages over and over mean that you have lost your ability to say meaningful things and you need "Expert" help, not the advice you are receiving from your ham friends, well meaning though they are.

I wish you continued success in your career as a small town community college instructor and only hope that your condition does not adversely effect your position there.

Wishing you the best.

7 3

In the 12 years that I have used USENET in one form or another, I've never once had to use kill files -- until about a month ago, when all the "libnet" garbage and in-bred hick-bickering started. Since dumping those morons into my kill file, life has been much more pleasurable.

Obviously, the RRA newsgroups need to undergo a moderation process to help eliminate some of the nonsense. Not everyone is fortunate enough to have kill-file capability.

4766. Capt. B.J. Blazkowicz knows Morse Code?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-14 00:00:00 UTC
From: rcrusoe@aol.com
Message-ID: <1998061417425400.NAA15859@ladder01.news.aol.com>
Source record: 169779

I enjoyed the shareware version of Wolfenstein 3D when it came out. The shareware version had only the first of 6 or 7 episodes, and the remainder used to cost about $60. Rummaging through Babbage's cheap rack the other day, I ran across the complete Wolfenstein 3D on CD Rom with hint book, etc for the princely sum of $4.99, so naturally I bought it. Got a 5 year old game but saved $55.01. <satisfied grin>

In the third episode, "Die, Fuehrer, Die!", the hero receives a Morse Code message... not sure how as no receiver is visible... pretty hokey message but nice code... Farnsworthed about 12 WPM throughput and about 22 WPM character speed. Just thought the Morse-ophiles would be interested in adding another to the list of media Morse examples.

Me thinks you missed the point. Everyone thinks those who don't agree with them are morons. It doesn't make any difference which side of the fence they are on. I wasn't trying to stir the pot, just trying to make the point that just because someone doesn't agree with you does not make them a moron. I don't mind reading other people's opinions, I am sometimes swayed to their point of view, but only if their arguement is rational, factual and doesn't just consist of mud slinging. If you want mud slinging get into politics. It seems everyone considers themselves intelligent people, and I'm not talking degrees or anything like that, so why can't we act like it. I'm sorry if I offended anyone, it wasn't my intent.

Hello
Is there anyone in here interested in Packet BBS's? I have one. I'm running MSYS1.19 under win95 it works quite well. I have been asked it the past why don't I run FBB? The answer there is my users prefer MSYS1.19 its not as complicated to run as far as the user is concered. In fact its not as hard on the SYSOP either. Anyway here is my question, Has anyone been able to open a gatway in house from one computer to another? THis is what I would like to do, I would like for a user to log into the BBS then telnet over to my Linux box then out onto the internet through telnet, ftp, or gopher. I'm still in the days of 1200 baud on my BBS because all my users have 1200 baud TNCs. I'm also doing this via 2-meters. I have no 440 220 or 1.2 gig TNCs setup, as up yet. (someday I would like to play with highspeed air link conection on 1.2 gigs if I could find a partner would wants to play it in my area. I had one but he wasn't a ham he was a isp and he shut down the system because of burnout. Thats another story.) If you can help me or your intersted too in what I want to do with the system drop me a line. my email is oris@dirtball.com
thanks pay my sight a visit

I belong to many organizations that you will
consider undemocratic. As I have already noted
I served as president of a national car club and
was "elected" to the position...not by the membership,
but by the current staff. That is still the way we do
it and our car club has 3000 members and is almost 25
years old.

> In fact,
>it seems very much to be exactly what Stevenson claims the ARRL is --
>"take it our way and shut the hell up, or get out."

A gross exageration. Anyone can make suggestions,
complain or otherwise. The NCI BOD may or may
not accomodate the suggestion. That is true in
many organizations. That is true in ARRL also to a certain
extent. I accept that as a member of any organization,
as well as NCI and ARRL.

Well maybe I'm not going senile. I thought "C" schools taught
a piece of equipment, and I had never heard of anyone being
"issued" the code, and I was pretty that if someone flunked
out of RM "A" school he would end up in the deck gang, not the
brig.

Now that "basic pay" was a real motivator. When I was in it
was $76 a month in basic and $85 a month as an E2.

What is totally amazing is the membership of NCI allows things like
what you show on your web page to happen in their organization. I guess
that is what you get when a bunch of people trade their morality for a
free HF handout.

SB DX @ WW $OPDX.361
Ohio/Penn DX Bulletin No. 361

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 361
BID: $OPDX.361
June 15, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1HRW, WB2RAJ/WB2YQH & The 59(9) DXReport, K4VUD, W4OX, N4GN, K5YG, KH6BZF, K8ME, K8CX, K8YSE, KF9YL, N9WDQ, W0YG, AP2TJ, BA4TB, DK4UN, DL1XX, EA1ATL, G3VMW, G3XTT, G4BUE & DX News Sheet, GW0ANA, ON5NT, OZ1FJB, VE3EXY, VK4AAR, YS1FEA and Hillar/Elsie Raamat following DX information.

JUST A REMINDER THAT NODXA MEMBERS WILL ACTIVATE THE MARQUESAS ISLANDS ON RTTY. Northern Ohio DX Association members Bill/W8JGU and John/K8YSE will operate Nuku Hiva (OC-027, Marquesas Islands) from June 14-18th. Their main focus will be on RTTY. Look for John and Bill to sign FO0PAP and FO0MAC, respectively. Again, this island may count for BRAND NEW RTTY entities once voted and approved by the DXAC. Activity will be on 40, 30, 20, 17, 15, 12 and 10 meters on the usual frequencies. All QSL requests go to K8OU. ADDED NOTE. Since John is the caretaker of the OPDX Web page the site will not be updated until his return.

9N, NEPAL (Update). Charles, K4VUD, reports that beginning July 10th, he will be operating 9N1UD and will be looking especially for stateside contacts. He will stay in the Kathmandu area until about December 5th. He suggests looking for him during Nepal's sunrise and sunset times daily (he can not predict which days). He will first try 14195, then 14023 kHz; and then 21295 and 21023 kHz. He has a daily sked with Southeast Asians on 14215 at 0100z, via either his 9N callsign or 9N1AA, or if they get it, 9N1MM. He plans to try the lower bands this time (also 10 and 6 meters). Charles intends to E-mail the DX-Reflector's Mail List on any specific skeds when and if he can make things specific.

AFRICAN ACTIVITY. Charlie, W0YG, will once again head to Africa in July and August. He currently holds V5/ZS6YG, A22/W0YG and Z21/W0YG licenses. Operations will be limited to CW and possibly RTTY only. Most operating will be done 40-10 meters with specific attention to the WARC bands. He will be advising OPDX of the exact dates when they are firm. QSL all contacts via W0YG. DO NOT send cards via the ZS bureau. They will not

be answered.

BI4, PING ISLAND, PRC (Update). The Jiangsu DX Club (JSDXC) plans to be active as BI4Q from Ping Island (new IOTA) between June 19-21st. The team will consist of Jin/BA4TA, Deal/BA4TB, David/BD4RF, Ken/BD4RD and possibly others. Two stations will be active on CW/SSB. They will be active on the following frequencies:
CW - 3504, 7004, 10104, 14040, 18074, 21040, 24894, 28040 and 50110
SSB - 7050, 14260, 18135, 21260, 24945, 28460 and 50110 kHz.
QSL via 9A2AJ (Tom Polak,P.P.,34551,LIPIK,CROATIA) only! For more infomation, contact Deal/BA4TB via E-mail at: ba4tb@qsl.net

DAYTON 98 PHOTO GALLERY IS NOW UP AND RUNNING! Tom, K8CW, reports to OPDX that there are 105 new pictures this year on his home page. Most of them were taken at the Crowne Plaza Hotel (where a lot of famous DXers meet). Some were taken at Hara Arena. Also, Tom mentions that he has added a new "Buy, Sale, Trade" page (Hamfest Gallery) were you can post your ham equipment in 15 different categories. "This is a free service. Feel free to use it as often as you like," states Tom. The "K8CX Ham Gallery" can be found at: http://paradox2010.com/ham/

ET3, ETHIOPIA. Steve/G3VMW, Alan/G3XAQ and Andy/G4ZVJ, will be operational from Addis Ababa, as ET3AA, between September 18th and 27th. Activity from ET3AA, the club station of the Ethiopian Amateur Radio Society, will be on all bands from 160-10m but with emphasis on the LF and the WARC bands. The operation will be mainly CW with some SSB and RTTY if there is sufficient demand. Operating frequencies will be as follows: 1829, 3508, 7008, 10108, 14026, 18076, 21026, 24896 and 28026 kHz. Always split frequency, listening up between 1 kHz and 5 kHz. QSLs via Steve Wilson G3VMW, 3 Crag Gardens, Bramham, Wetherby, West Yorkshire, LS23 6RP, England. More details of the ET3AA DXpedition are available on G3VMW's Web page at: http://www.bramham.demon.co.uk
There will be an on-line log search utility immediately after the operation. During the visit to Addis Ababa, it is hoped to obtain personal callsigns from the Ethiopian government in readiness for a sustained two-week DXpedition during 1999.

FP, MIQUELON ISLAND. The Prairie DX Group (N9PD) is pleased to announce their DXpediiton to Miquelon Island (NA-032) from August 26th to September 1st. Their callsign will be FP/N9PD, and they will be operating mutli-band 10-80 meters (also maybe 6 meters), multi-mode (SSB, CW & RTTY) continuously during the DXpedition. QSL info is direct (SASEs or IRC appreciated) or via the bureau. Further information can be obtained at their Web page at the URL address: http://www.prairiedx.com
Or you can send your comments via E-mail to Fred (KF9YL) at: efl@interaccess.com

H40AA POST-OPERATION UPDATE (June 14, 1998, An excerpt from Jarmo, OH2BN, press release, provide by Tim, N4GN.) [OPDX InterNet Subscribers will receive the full releaseas an additional bulletin.] "The validation of the database as well as the merging of a variety of data files has been successfully completed for the 67,129 H40AA QSOs, and the full-color,

folded QSL cards have been received from the printers. QSLing will commence on 29 June and the QSLing team, led by OH2BN, will get the cards out as quickly as possible. The DXCC status of the Temotu Islands should be determined during July, and QSLs should be accepted by the DXCC desk in October."

IOTA DXPEDITIONS PLANNED. Operators Matthias/DK4WD and Ron/DK4UN plan to travel in June and July to the northern Scandinavia area to activate some IOTA Groups there. Matthias will operate mainly on CW, and Ron will conduct the SSB operations. They will operate under the CEPT Rules as LA/, SM/ and OH/homecall. The following schedule is planned:

June 27 - EU-135, if possible
June 27-29 - EU-139, Seskaroen
July 1-3 - EU-126, not sure, maybe Hailuoto
July 3-5 - EU-141, Vardoe
July 7-10 - EU-044, maybe Soroya
July 10-12 - EU-046, maybe Senja
July 13-17 - EU-033 and EU-076
July 18-19 - EU-062
July 21-22 - EU-079, Hareidlandet

This schedule is subjected to some changes depending on weather, how-to-reach some islands and other activities. Their first priority is to give as many OMs a new IOTA-Group. QSLs are 100% via bureau. For direct QSLs: DK4WD via callbook address and DK4UN via Ronny Triemer, P.O.Box 47, D-09023 Chemnitz, Germany. All information and the "Latest NEWS" about this activity are available at the following Web page: http://www.qsl.net/dk4un

KG4, GUANTANAMO BAY. A team of the Florida Contest Club (FCC) will be in GTMO for the IARU HF World Championship July 11-12th. Team members are: Rusty/KG4AU (host, WV3N), Bill/KG4GC (W4WX), Vic/KG4TO (N4TO), and Doug/KG4OX (W4OX). KG4OX will be the contest callsign. Members will arrive Wednesday, July 8th, and remain for one week. Members will be active on all bands and modes before and after the contest including 6 meters (band conditions permitting). QSL contest QSOs go to Doug McDuff, KG4OX/W4OX, 10380 S.W. 112th Street, Miami, FL 33176. Please include a SASE. Bureau cards are welcomed. QSL KG4AU via W4WX, and all others via their home calls. Any comments or questions may be sent to W4OX <dmcduff@gate.net>.

KH6BZF PROPAGATION REPORTS. OPDX InterNet Subscribers will receive Part 2 of Lee's forecast (Band-by-Band Propagation Expectations) for the month of June as an additional bulletin.

QSL INFO AND NEWS.....
Dwaine, K8ME (ex-WA8MEM), would like to notify the DX community that he is NO longer the QSL Manager for OD5ZZ or OD5RAK. QSLs that arrive will be returned. Dwaine states he has NOT heard from Walid or his group in 4 years.

H75A LOGS. Chris, N1HRW, just wanted to let OPDX know that the logs from the H75A IOTA NA-209 DXpedition has now been placed online for searching. The log is on the Islands on the Web website at:
http://islandchaser.com
in the "Logs Online" section of the site.

Log search for YS1X (OH-activity and VP8CTR [OP Roman EM1KA]) is now available on the Web. Check out the URL address:
http://www.qsl.net/gdxf

ED1SCR was on the air to celebrate the 125th aniversary of the Spanish Red Cross in Salamanca, Spain. QSL info: EA1EAU (OK via bureau).

The Barry Amateur Radio Society activated GC4BRS/MM during last weekend from on board the "PS Waverley" cruising in the Bristol Channel off the coast of Wales GW. This ship is the last ocean going Paddleship in the world. QSL Manager is GW0ANA (direct or via Bureau).

9M0C QSLs Update. Phil, G3SWH, reports that, to date, he has received 5735 items of mail and is dealing with them strictly in their order of arrival. So far, he has opened 4115 of them and is working on mail which arrived on April 6th, i.e exactly two months ago. There has also been 176 E-mail requests for cards to be sent via the bureau, but so far no cards have been received via the bureau (too early at this stage). There has been 9037 QSOs confirmed, along with dealing with dozens of queries of various sorts, all of which are time consuming. It should also be noted that many replies to Australia, New Zealand and the Far East have been sent by surface mail due to insufficient return postage (while an IRC covers basic rate postage to all destinations, from the UK this is only for items up to 10g. The double-side card, along with inserts which we are obliged to include on behalf of various sponsors, takes the weight over this, especially where the return envelope is heavy of itself). Please do not send second requests at this stage, as they will merely go into the pile for the date on which they are received and not be dealt with any faster. They will announce when they are up to date with direct requests. Right now, Phil is taking a well-deserved break in SV-land but will take up the QSL task again shortly. (via G3XTT)

Alan, VK4AAR, is getting requests for VK9WM and VK9WY cards. He is NOT the QSL Manager for those stations. Perhaps people are thinking that Alan has taken over for VK4FW...this IS NOT TRUE. Only VK8AN has transferred QSL chores over to him. Alan is the QSL Manager only for the following list of the stations: V63PD, VI0ANARE, VK8AN, VK8MI, YJ8AA, ZK2JJ and ZK2PJ. QSL via: Alan Roocroft, VK4AAR, c/o Post Office, Dalveen QLD 4374, Australia

AP2AGJ CORRECTION. Tariq, AP2TJ, reports to OPDX that Amir, AP2AGJ, has been licensed since 1991. His QTH is Rawalpindi not Karachi. The correct QSL info is direct to: Amir Gulistan Janjua, House No. 56, Chaklala 1, Rawalpindi, Pakistan.

SPECIAL EVENT. By the time you read this, two special callsigns, OZ2GBE and OZ2GBW, from Denmark, will be active until the end of the year. This is in celebration of the June 14th opening of the world's second longest hanging bridge (Great Belt East Bridge). Contacts count towards "The Great Belt Award". Operations will be on all bands and modes.

S0, WESTERN SAHARA. The "DX News Sheet" reports that Hamdy, S01HA, is newly licensed and was active June 6th between 2000-2200z and June 7th between 1700-1900z on 14210 kHz.

S0, WESTERN SAHARA. Look for Mark, ON4WW (ex-9X4WW), to be active as S07WW starting June 15th for 4 to 6 days. His equipment is a TS-440 to wire antennas; no linear. He is preparing an inverted L for 160 meters. His CW frequencies will be: 160m - 1827.5 +/-; lower bands +/- 10 kHz from the bottom edge; higher bands - 022-024 kHz and the WARC bands wherever he finds a spot. Mark mentions this is a working trip, so activity will be mostly (local) evening and night times. Operations also depend on availability of electrical power. He may have to operate from the car, which could mean SSB only. QSL via ON5NT.

SV5, DODECANESE. Look for Vito, I3BQC, to be active this week beginning June 16th as SV5/I3BQC from Astypalea Island. His stay will be until July 12th. Also, he will possibly activate other Greek islands. QSL via home callsign.

SV5, DODECANESE (and YU-land). Nenad, VE3EXY, reports that he will have a low profile vacation operation from Rhodes Island (EU-001) between June 17-24th. The operation is intended for first-timers with focus on DX stations. He will sign SV5/VE3EXY/P and operate mainly on CW. Operations will be on 40/30/20/17 meters and 15/12/10 meters if conditions are good. Look for him 10 kHz off the band edge, listening 2-5 up (+- QRM). His operating schedule: 1300-1700z, 1900-2100z and 0200-0600z. This may change to take advantage of band conditions. Following a small vacation in Greece, Nenad may go to Yugoslavia between June 29th and July 6th and be active as 4N7ZR from Sr. Mitrovica. Activity again will be mainly CW, but there may be some RTTY and SSB. Bands of activity will be 80/30/17 meters and possibly the others if conditions are right. His operating schedule: 1700-2100z and 0300-0600z. QSLs via VE3EXY via bureau are OK or direct to: N.Stevanovic, PO BOX 65046, Nepean, ON, K2G 5Y3, Canada.

TF, ICELAND. If you missed Sigi, DL7DF, and his gang from here, OPDX was advised that TF3IRA will be operational again July 12-13th during the IARU contest as the TF-land's HQ Station. TF3IRA has again been granted full power license and the "BIG OLGA" antenna will be used on lower frequencies. The Club's C3 antenna will by used for 20 meters and above QSOs. QSL via TF3GB.

USI ALERT. Greg, NS8O, will be active from June 14-20th on Long Beach and Yaupon Beach Island. These are in North Carolina and appear to be new ones for the "United States Island Award". Greg also says that there are some other islands that are close by, and he might hop over to them. Look for him about 2000z on 20 and 40 meters. As Greg says, "Activity will probably be during the afternoon/evening as FISHING will be the

morning priority. Hey, I can't do anything until I have dinner caught and in the marinating sauce!".

VP5, TURKS & CAICOS ISLANDS. Bill, K5YG, will be active as VP5/K5YG from Providenciales (IOTA NA-002), from June 14-20th. Bill will operate mainly CW when he and his wife Susan are not SCUBA diving. Most operations will begin after 2000z. He has a daily schedule with ZS6YQ on 21235 at 1500z. QSL via K5YG. All QSLs received for his 1996 and 1997 VP5 operations have been answered.

XR, CHILE. "The 59(9) DXReport" states that the World Scout Jamboree will be held in Hacienda Picarquia, December 27, 1998-January 8, 1999, and Special Event Station XR3J will be active on 20 and 15 meters.

YS NET MOVED! There stations of El Salvador, who have been operating a DX Net on 40 meters, have moved to 20 meters due to the new winter season in their country (they report a lot of static noise on 40 meters). They will operate on 14165 kHz between 0200 and 0330 every day. Look for stations YS1FEA/Federico, YS1SH/Oscar and YS1CQ/Robesrto to be there every day. They report, at the present time, there are no more 10 HF stations on the air in their country. QSLs for the three go to: P.O. BOX 517, City San Salvador, El Salvador, Central America

ZD8, ASCENSION ISLAND. Paul, KF4OOX, is back from his stateside vacation and hopes to be back on the air again soon as ZD8V.

LATE MINUTE UPDATE!

S0, WESTERN SAHARA. Ghris, ON5NT, informed OPDX just after we released OPDX.361 that Mark's (ON4WW, ex-9X4WW) activity as S07WW may be delayed by 5 days. His operation may start around June 21th. Ghris (QSL Manager for Mark) states this date could be changed again (forwards or backwards). There is no way Mark can provide an early warning. It is suggested to "Keep Your Ears Open and Listen". The only thing certain is that Mark does have a license to be active from S0-land. Activity is depending on his work schedule.

You have absolutely no credibility in these groups whatsoever. Take this
to digital,the group created for this discussion. Then learn how to
spell,get your little prostitutes back from the state.and find a new ISP.
Bellsouth is way above the caliber of 11 meter trailer trash like yourself.

No MD that is what you get when you allow an idiot with a grudge to post heavily edited and out of context excerpts from the newsgroup. I noticed he didn't include any of his pearls of wisdom posted on the newsgroup in his website.

The sad part of it is you joined this charade and are trying to bump up his hits.

"Heavily edited"? "Out of context"? Maybe you'd like to post some examples,
Dave.

>I noticed he didn't include any of his pearls of wisdom posted on the

Why should he? Isn't that what the web page is for?

>The sad part of it is you joined this charade and are trying to bump up his

I visited. I found much of what he says to be "right on" target.

I realize that you probably feel betrayed, learning now for the first
time that you were duped into joining an organization which exists now
solely to profit the leader(s), all of whom are self-appointed-for-life
dictators. But, that's what you get when you fall for the old class-
warfare line.

First, we really need to move this to <Talk.Politics.Guns>.

Secondly, we hams are facing the same political pressures that
gun owners are. It seems like every hobby I have is under attack.

God, I wish these self rightous Baby Boomers would grow up!!

Here I thought rec.radio.amateur.policy was created for discussion
of the morse code issue..... so why am I seeing this garbage in
rec.radio.amateur.digital.misc? We have enough arguments
(such as the LL Lid issue) without you loonies cross-posting
your nonsense over here.

I used to read rec.radio.amateur.policy but gave up after I realized
that the same people have been carrying on the same argument
for YEARS. You guys really need to get a life!

>non profit Amateur Radio organization.

All one needs to do is read the ARRL's financial disclosure to the IRS
to see no profit it being made. In particular, cash inflow and expenses
in their publications area are well balanced.

The IRS surely knows more about the League's finances than both SCO
and Townsend.

I must say, amateur radio would have been greatly hindered if not for the
ARRL's technical pubs. In the 22 years I've been licensed, I've never seen
a ham shack that didn't contain at least one League publication. Those
amateurs that are serious about the hobby (i.e., builders) usually have a
shelf full of League books. (The Handbook is the greatest selling
technical book in print.)

You're not paying for the cost of the parts, dork, but rather the
time spent on designing the item and the choice of parts. Any
radio you use has a parts-value of only a few dollars, but try to
buy the rig for just that much.

Let's see your original design for an RFI filter, explaining the
role each component plays, and how you came about choosing the
particular values of those components. An ASCII drawing will be fine.
Include all specifications and explain how you obtained such specs.

The military disagrees with you. The Handbook was used as a radio textbook during WWII for all services; the ARRL couldn't print enough copies to keep up with the government's demand.

The Handbook has always been the largest selling technical publication for the general public.

Thats okay by me. The hobby isn't for everyone. I don't look up to the extra licensed ham and I don't look down on any other licensee or even a non-licensed person (given they are not operating illegally or without a license). This new testing program I propose is for those persons that wish to become a licensed ham.

Dear Cousin Jethro:

How u doin' bub???

Looks like you've been rather busy lately.

Did you ever find a new place to live out in the country?

I've been hanging out other places. Since I never hear WA9KJI on the radio anymore, it has become very disappointing listening to 3950.

KJI was the star attraction and now he has denied us his un-wholesome but very satisfying entertainment.

U might send Mezger a get well card. He's recoving from foot surgery.

I told him to have the doctors work on his brain, not his foot, and he took it all very well. Said they already worked on his head but didn't help any.

Hey, life's a bitch, no???????????????

Good luck after the market crashes. Coming soon, to a theater near everyone.

Good luck in the contest, Jethro

Yeah, right (but it's a easy way to try and cover your axx.) Did you
buy the "Puch" geeky/eccentric means of transportation because you
knew it was from Hitler's homeland also ??

BTW Fisher since you like this "Sins of the father" routine so much
regarding Germans have you expressed remorse for the killing of Christ
a couple of thousand years ago ?? If you like starting/renewing old
hatreds and animosities others can look in your lineage as well.

FWIW most *educated* individuals try and concentrate on what we all
have in common and seek peace/cooperation between *all* members of the
human race rather than stirring up old hatreds and animosity, perhaps
you should try it? Or is that too much for your hate filled brain to
accept ??

Hi Jeff,

I just checked out your homepage...pretty cool. I thought I'd say "howdy" as I am a fellow bluegrass lover. This is my first attempt at communicating with any US bluegrass fans using the net and it's all a bit new to me. I not even sure you will get this message but what the heck. Bluegrass music is not all that big here in Australia, not by American standards anyway, but I guess that is to be expected. I have been playing bass in a bluegrass band for about 18 mths and at the risk of sounding big headed, we're not hlalf bad. my favourite BG bands are the Lonsome River Band and Blue Highway. Have you had the opportunity to see either of these bands perform or have you ever been to any of the big bluegrass festivals I'm always dreaming of attending?

Better sign off now or I'll be raving on too much. Hope you do get this message and maybe I'll here back from you soon.

All the best,

Lonesome Jake.

HEY JIM,,, Done it, been there!

The later serial number Alinco radios (15000) are tighter.
You need to open up the back ofthe radio. There is a 1\2" rectangle
tin can. there is a 3mm hole on top. Inside this hole is a small
coil.
The coil is sealed with HOT GLUE. Remove the hot glue with a hot pin
or small screwdriver. Heat with a candle.

After coil is clear of the glue, carefully poke & spread the coil
apart. BE CAREFUL & GO A-LITTLE AT A TIME!
I got mine up to transmit up till 468 mhz. Good luck
John in roch. NY KF2VW

4806. Zenith ZCM 140 Color Monitor

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-14 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <358373A1.71A6@dirtball.com>
Source record: 169831

Hello
I have a Zenith color monitor that has a problem. This problem is that it will read the 800 X 600 SVGA mode fine. Just as clear like there is nothing wrong with the monitor.
It just will not do 640 X 480 VGA, it looks like squiggly lines, and it will not do text mode (dos) right it looks like squiggly lines.
I did change out video cards same thing and I tryed different computer and I got the same thing. I talk to 2 expiranced TV and computer monitor techs and they say they have never see this problem before. Well I also set the monitor up on a older machine and I got the same problem. If you think you got a idea on what is going on with this monitor drop me a email oris@dirtball.com .
I will also trade the darn thing off for a good 13.8 volt 20 amp power supply. It does work under win95 800 X 600 fine. Just the dos mode and 640 X 480 is scerwed up. I think its a problem in the refresh rate but I don't know what is going on to fix it. 60cycle refreash rate seems to be the only thing that works in that monitor. I'm also wondering if Zenith has a utility that changes that refresh rate. I wrote Zenith but I have not gotton anything from them as of yet.
Thanks for reading

Ultimately, in any club, being in a Board position is a "voluntary"
activity.

>And we No CODE International are open to others to join
>us also. You seem to expect NCI to fit your preetermined
>mold of what a club should be.

No Bill, I have the expectation that organizations will act in a
fair manner towards their membership. I don't consider a self-appointed
Board of Directors, with indefinite terms, no by-laws, no plans to
hold an open and fair election of organization officers, and no
by-laws to call for removal of club officers should the membership
deem it necessary, to be a very democratic organization. In fact,
it seems very much to be exactly what Stevenson claims the ARRL is --
"take it our way and shut the hell up, or get out."

Another translation could be "What does this have to do with Amateur Radio?" Granted, these are important subjects but IMHO this is not the proper newsgroup for these postings. IMHO the guys that did this in Texas should be, if found guilty of the crime, be dragged behind a vehicle until dead. Let the punishment fit the crime. I'm sure if they get to prison they'll be real popular with the black inmates. But lets keep this news group focused on Amateur Radio. Thank you and 73

Not going to happen. Why should someone have to be a physics major in order to talk on a freakin' RADIO? Especially when the Internet now allows worldwide communications 24/7 with no license required.

Yes. Meanwhile, we have the biggest disgrace in the history of the American
presidency telling us that we need more immigrants, that we need to make them
feel "welcome." This coming at a time when the southwestern US and Florida are
being overrun with hordes of immigrants who refuse to learn our language and
are draining our social services (read: WELFARE and PRISON) budgets to
depletion.

Nice to know we have a president who supports the rights of immigrants over the
rights of native-born American taxpayers.

4821. worthwhile reading

Newsgroup: rec.radio.amateur.misc

I just went through the current postings (since yesterday) on this news group and took out all the bickering, name calling and such and the number of messages went from 105 to 40. Close to 2/3 of the postings were of a non-ham nature. The world is full of angry people, morons and others who disagree with you. You all know who the morons are, they are the ones who disagree with you. I'm sure there are NG's out there for political discussions and any other type of discussion you wish to have, please use these. It gets very tiresome to wade through all this childish nonsense. The subject doesn't mean this post is worthwhile reading, I was referring to the worthwhile reading on this NG, or lack thereof may be more appropriate. 73

2 kits, built in last few weeks, in excellent condition, work flawlessly
in
there matching enclosures, with all instructions, Need to raise money
to finance A new Sony Scanner.
1. MODEL FR-1 FM Broadcast Radio has the tap for SCA., works great
very sensitive reciever, picks up many many Fm radio stations
Original price new $24:95 Case $14:95
2. MODEL TG-1 Tone Grabber DTMF Decoder Kit, Very COOL device
Plugs into your scanners ext speaker jack and when you scan
cordless
phones, and someone gets a dial tone and dials a number, this thing
instantly tells you what number they dial, Many uses.
Original price new $99:95 Case $14:95
These can be seen at Ramseys Web site Ramsey.com I think
Paid $155 new. Would like to get$100 for all and I will ship .
Thanks
David
Houston Texas

K3CQR, Bill....better known as the infamous "RainCoat Charlie"....pleaded with the FCC to reduce hisfelony fine due to hardship. They reduced it, but"hardship" is certainly not the case.In numerous QSO's, I've heard "Rain Coat" mentioncalling his stock broker. Just last night, Billmentioned his CASHMERE jacket!!Must be nice!(What a bunch of hypocrites these "oddfellows".....Imean "goodfellows(?)" are.....)

AF2Y, Doc calls himself a man of the highest integrity. I say:
"BULLSHIT!"Two days ago, in a 20 meter QSO with the infamousbootlegger, Doc aske the bootlegger if he had receivedhis QSL card. The bootlegger acknowledged that herecеived it.So here's Doc, putting down Herbie all the time forhis minor telecommunications crime, and Doc is aidingand abetting in a felony himself!!

4826. Let's talk about LAWSUITS and LIBEL

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-14 00:00:00 UTC
From: thelibnet@aol.com
Message-ID: <1998061414030200.KAA20870@ladder03.news.aol.com>
Source record: 169851

Lotsa saber-rattling around here about certain individuals' names and call signs appearing on Web sites. The usual threats of legal action are prevalent. Question: if the person(s) who are mentioned on these Web pages had a legitimate case for libel, don't you think some ambulence-chasing lawyer would be on the case by now? The logical conclusion is that these persons have no case. And why is that? Because TRUTH is an absolute defense against libel.

Think about it.

4827. FS - Uniden 2500xlt

This is a 400 channel handheld scanner in mint condition. This scanner covers 25-1300 mhz, but cannot be modified for full 800 coverage. It has a host of features such as auto store and auto sort of frequencies for efficient scanning. It comes with one rechargeable battery pack and original manual. A great deal at $150.

I also have an earlier version of this same scanner with full 800 coverage. That one is mint and comes with the original manual and box. Please e-mail if interested.

4828. FS - AOR-1000 scanner

Thank you for your information about the "mod". Guess I got lucky, havent noticed a problem on my 1000MP. As for the call, yes that is correct, it was re-issued to me under the "prefered call system". The only way one could get a w or a k issued at that time was by holding a K or a W call when he moved to another district. FYI I held K8BHH. Want to try again to insult me? Oh yes....shell shocked in not a politically correct term now. It is now called Post Traumatic Stress Disorder (PTSD), of which I am rated with the VA.

Have a nice day idiot

The Master
II receiver casting "grows" microscopic "hairs" that shorts
out the
front end sections. It is a common problem in Exec II, MVP, and Master
II, VHF/UHF combinations. The castings need to be disasembled and
cleaned out then retuned.

Well, it has a bent frame from hitting a guard rail on the
interstate. It needs a tune-up, a brake job, and it has
almost 80,000 miles on it.

Jimmy, check http://www.kbb.com
You'll be lucky if you can get $2,500 for it. So, with
a good used car running about $15,000 - $20,000
now, who is going to loan you or your bowling pin
$12,500 - 17,500 to buy a car?

Looks like you got a problem Jimmy. Time to start
selling radios off.

>case. And why is that? Because TRUTH is an absolute defense against libel.

Far be it from me to ever agree, with him, but he does have a point here.
Truth IS the absolute defense.

However, that is not to say that things said in truth cannot be actionable.
There are a couple of cases I recall where a public figure sued a reporter for
the contents of a story. It was a small town mayor caught buck naked outside
his house. Locked him self out for some reason. He was sober, and it was
early morning. The local paper printed the story, and the mayor sued the
reporter and the paper for attempting to humiliate and embarrass him in a
public forum. As I recall, the mayor's case was so strong that the paper
settled halway into the trial, and the reporter was reassigned. It has been
suggested that had the case been allowed to complete trial that the verdict may
not have been in the mayor's favor, and that if it had it would most certainly
have been overturned in appeal. But the issue is, that the story WAS true, the
case DID go to trial, and the paper conceded defeat.

So not all absolutes produce absolute results.

One other thing, the logic behind the statement, "if the person(s) who are
mentioned on these Web pages had a legitimate case for libel, don't you think
some ambulence-chasing lawyer would
be on the case by now? " is a specious argument. Many lawyers, and in the
specific case, ambulance chasers, do not always take cases based on the merits
of law...but the merits of profitability. And the accusations of libel, here,
would be highly un profitable to prosecute.

Joe,

I don't know if it is my computer, or the WWW site to listed, but I'm unable to pull up that diagram with any clarity or detail.

For information on the "Big Rig" you might try to track dowen a copy of "Practical Wireless Telegraphy" by Elmer Bucher. First printed in 1917, but reprinted for several years after that. If you do not need a First Edition in immaculate shape, it is available for $30 or less. It is a fascinating book! One good source is:

New Wireless Pioneers
Box 398
Elma, NY 14059

I believe the proprietor (James Kreuzer) is a Titanic, Marconi, Wireless buff.

Re the 10" simple spark coil: That probably was an emergency back-up unit. I've seen that in various books as a typical contingency set. (In fact, the diagram for the 1.0 KW 60 Cycle Non-Synchronous Transmitter, a motor-generator and transformer based unit with a rotary-gap, shows a 10" Induction Coil. The text calls the "students" attention to this as part of the "Tuned Coil Emergency Transmitter.")

Observation: The book is primarily technical and engineering, with lots of photos and diagrams. There are also operational sections regarding tuning and how to get out and receive efficiently. I don't know if it is my imagination, but the book seems to avoid even mentioning the "Titanic" or any other disasters.

There is a comprehensive chapter on the "Standard Marine Sets of the American Marconi Company", but no mention of a 1-1/2 KW rig. As R.M.S. Titanic was of British registry, perhaps the radios were manufactured by one of the European based Marconi companies. (There are similar chapters on the receiving sets.)

Hope that helps. Regards.

73, Dave K7HMP/4

Good point. Which brings up another issue...in order to win a libel suit, damages must be proven. I don't think there's been much of a monetary loss to the fine fellows mentioned on the Web pages.

The posts to this newsgroup have really amazed me in their lack of respect for one another and the apparent time it takes to read all of the posts, think of something equally idiotic to write, to write a nasty post and then to keep checking the newsgroup for a response to your post.

I thought this newsgroup was for the POSITIVE discussion of amateur radio, and not the degradation of it's readers and those who post messages. If you could translate minutes into dollars, imagine how much money you're wasting pursuing childish games. If someone ticks you off, try to be the mature adult you claim to be and focus on the real issues at hand. Straying from the real issues and degrading someone's Momma's reputation shows just how little class you have. Also the morons who encourage someone to "Pull the trigger" aren't focused either, and frankly, wasting eveyone's time. If this newsgroup is monitored, the monitor has been out for an AWFULLY LONG LUNCH BREAK or doesn't have a clue either.

If this newsgroup reflects the future of amateur radio, or any other kind of radio for that matter, Marconi's genius has been wasted.

Drill a hole in the center of the top of the cab and mount it there. I have a 102 inch whip mouted on the roof of my 83 T-bird (its a piece of crap so holes can't hurt it. All though its what is under the hood that couts and when I step on it, it goes if you know what I'm saying). I get

great signal reports from my moble station on 10 and I have a 20 mtr
wipe mounted on the left quarter pannel and that gives me good signal
reports. I have a wipe on the right quarter pannel for 75 and I get real
crappy reports on 75 but I'm only running 70 watts. Life can be hard qrp
on 75. The best place to mount a antenna on a moble unit is right in the
center of the roof.
I hope I help you and gave so ideals too.
73 from :-)
Oris
N3CND
Talk about redneck trailer trash:drill a hole in his roof for a CB whip? And whats a
20 mtr
wipe mounted on the left quarter pannel and that gives me good signal
reports. I have a wipe on the right quarter pannel for 75

Is that what he wipes his porkbutt with? Good Lord,how did this illiterate hick pass a
licensing exam?

Sorry. Incorrect translation. Actual meaning: This is a thread where there never will be agreement because there can be found both right and wrong on all sides. Therefore, it is not productive to "beat the subject into the ground", and it will only foster ill will.

More likely they asked for volunteers to be on the BOD, etc.

>Compare this to No-Credibility International, where a hunta of
>military dictators got together, appointed themselves "the Board"
>(indefinitely, I might add), and now "run" the organization.

And we No CODE International are open to others to join
us also. You seem to expect NCI to fit your preetermined
mold of what a club should be. That's your opinion,
but there are a great variety of ways in which the
staff, board of directors or whatever positions are
filled in volunteer organizations as well as corporations.
By the way, after becoming president of the national car
club I mentioned in another post, I held that position
for 8 years at which time I decided to step
down. There were no elections, no call for elections
and the bylaws didn't specify any need for elections.
My success as president and the success of those
before and after me was a reflection of the growth
and success of the club.

>Oh, want to know when the next election will be? Want to recall a
>Board officer? Gee, sorry, can't do that -- no by-laws.

If the sun raises and sets for you because of bylaws,
then so be it. I've seen many clubs that have no
by-laws at all and have no intention of ever having
by-laws.

Cheers,
Bill K2UNK

From: k1oik@mindless.com
Message-ID: <6lviencfn1@nnrp1.dejanews.com>
Source record: 169917

I am a married white Christian male from the
Detroit area. I live on welfare I have a high school degree,
and I am also seeking child-care reimbursement.

I am 5'4", 235 lbs, black eyes, short salt and pepper
hair, sloppy-dressed, heavy smoker, heavy-drinker. I am not
and never will be a God damned
Commie liberal pinko, and also am a very cold, anti-social,
vengeful, hateful, and spiteful person. I love
to spend time alone.

My interests as sure as hell don't include boring things like
electronics, travel, comedy movies, swimming, queer things like
walking
on the beach, parasailing, country music concerts,
bluegrass music festivals, and talking to people online.
My ham radio call sign is KJB5678. I have an Extra Class
CB, I mean amateur, license, and I may be heard on one of
the local Detroit area repeaters on the 2-Meter band,
and on the HF bands around 26.9 MHz.

I'm looking for a single white female with the following
qualities:

She must be a real bitch, 18-23 years old, fat,
chain smoke, always drunk. Must also
be a paroled person on home release like
myself. I would like someone who has the same interests
as I do, especially monster trucks, cars without mufflers, the
smell of exhaust and country music, bowling, and ham radio.
Must also be in pursuit of a GED with a rewarding
career at Wal Mart, but too busy to spend time with someone
and bitch and moan on a regular basis.

If you fit close to this, you can get a high paying guest appearance on The
Jerry Springer Show.

>Would it give you a heart attack If the Liberty Net was on EVERY NIGHT!

Hey, now that's not a bad idea. While we're at it, how about the creation of a 10-meter version, now that the band is coming back. Would extend The Great Liberty Net's availability to Novices and Tech Plusses. As an added bonus, all freeband CBers with "export" or modified 10-meter ham radios would be able to listen as well. Great way to increase listenership, participation, and awareness of The Great Liberty Net.

4866. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6m26k6$p8d@news.Hawaii.Edu>
Source record: 169671
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

4867. RE: Question about 10 Meters.

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-15 00:00:00 UTC
From: Michael1998@webtv.net
Message-ID: <6m2kenvr1@newsd-113.bryant.webtv.net>
Source record: 169672

If there is still anyone in the newsgroup with any intelligence based upon some of the b.s. that I am seeing posted, maybe someone could e-mail me with the answer to a question I have. I often hear operators on 10 meters mention that they have numbers refered to as "springbok" and "Chesapeak Bay" numbers. Could anyone explain to me what these numbers refer to. I am familiqar with 10-10 numbers, but I haven;t heard of the ones mentioned here.

Thanks
Mike

4868. QST - Sinclair articles ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-15 00:00:00 UTC
From: Dominic Baines <rdab100@hermes.cam.ac.uk>
Message-ID: <3584E1B5.95254873@hermes.cam.ac.uk>
Source record: 169673

Looking for a local source or library for QST magazine. I'm looking especially for articles related to the Sinclair ZX81, ZX Spectrum and later spectrum computers which would have probably appeared in about 1982-1986 issues.

Does anyone either have copies or an index to see if any issues include articles of interest that thy would be prepared to lend or photocopy relevant pages ?

Similar story with Ham radio today and Practical Wireless but I think I have found a local library that can help.

If anyone knows of any other magazines with suitable articles I'd be extremely interested to hear about them.

email: rdab100@hermes.cam.ac.uk

4869. Special Events station GB50LR...

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-15 00:00:00 UTC
From: Matt Wilson <matt@zamboodle.demon.co.uk>
Message-ID: <01bd983d$bd15ee40$242c2c2c@Lightning.auriga.co.uk>
Source record: 169674

Over the weekend 27th - 28th June '98 at the Shugborough Hall Land-Rover Series I Club 50th anniversary event a Radio Amateur Special events station with the callsign GB50LR will be operating. 1998 marks the 50th year of production for the Land-Rover company, and the Series I event will attract around 450 working examples of the first mark of the vehicle all dating from 1948 to 1958.

The station will be operated at various times during the weekend on all H.F. bands, 2m, S.S.B. and FM. You'll just have to listen for the C.Q. over the weekend, but that's going to be part of the fun! Shugborough Hall is located approx. 30 KM North of Birmingham, England (OS grid reference SJ9922).

Packet Radio messages for GB50LR can also be sent over the weekend via B.B.S. GB7RUG. (GB50LR@GB7RUG.#28.GBR.EU)

All contacts made throughout the weekend will receive a commemorative GB50LR QSL card.

Testing on the Friday while the station is set up will use the callsign GB5LR. Any licensed amateurs attending the Shugborough event are invited to help out running the station during the weekend.

Good luck and safe journey to all who are attending the show, and we hope to hear all the 'hams on the air over the weekend. Please do spread the word around and perhaps those with Land-Rover or Radio Ham webpages could cut & paste the above to a page. Thanks very much.

You were not very specified on the frequency range in question. If it is for
low band operation I would suggest you get a copy of "Low band Dxing by
ON4UN". For other information on phasing Id suggest the ARRL antenna
handbook. Dan/W4NTI

4872. 2nd Straw Poll: rec.radio.amateur.* reorg

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-15 00:00:00 UTC
From: Jeremy Billones <billones@primenet.com>
Message-ID: <6m30d2ehk1@clarknet.clark.net>
Source record: 169677
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy

(Repost. Crossposted to fewer groups, multiple times.)

LAST CALL FOR VOTES (of 2)

Votes must be received by 23:59:59 UTC, 22 Jun 1998.

This vote is being conducted by a neutral third party. Questions
about the straw poll should be directed to the rec.radio.amateur.*
Working Group at <rra-wg@theporch.com>

Votetaker: Jeremy Billones <billones@primenet.com>

STRAW POLL Q & A

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV
process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?
Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which
initiated the last major reorganization in 1993) is the point-of-contact
for questions about this opinion poll. Principal members are Paul
W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg
member, Gary Coffman, KE4ZV, also endorses this opinion poll. this
opinion poll will be conducted by an unbiased third party from the
Usenet Volunteer Votetakers (UVV), Jeremy Billones

(billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborious and time-consuming, and perhaps unnecessary), we will conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV). During the poll, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I disagree with this newsgroup's charter or I believe that this newsgroup's existence should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the preceding 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the

readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If this opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, this opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)
rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are
principally used by readers of rec.radio.amateur.*, and their fates
would substantially be decided by any significant reorganization of the
rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.*
reorganization, rec.radio.cb is not included in this opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups
(except for rec.radio.broadcasting and rec.radio.info, which are
moderated). In addition, the following individuals were consulted prior
to this announcement (note that consultation does not necessarily
imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list
gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization,
former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV
process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group
_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Vote "YES" for all of the existing rec.radio.amateur.* newsgroups.

Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?

Vote "NO" for all (or all but one) of the newsgroups.

Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?

Vote "YES" for any newsgroups that you wish to remain unchanged, and
vote "NO" for any newsgroup you wish to have reconsidered in a future
RFD/CFV.

Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?

Since this opinion poll is for both the existence of given newsgroups
AND their current charters, you should vote "NO" for that newsgroup.
Again, this is a non-binding opinion poll simply to determine if current
newsgroups should be considered for modification or deletion, not a vote
to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by opinion poll. A
future RFD/CFV would have to be initiated to do this. You are, of
course, welcome to express your opinions concerning new newsgroups by
posting them to rec.radio.amateur.misc (*NOT* by E-mail to the
vote-taker).

Q: I have no opinion, what should I do?

You may wish to read the preceding 30 days of public discussion on
rec.radio.amateur.misc about this opinion poll to develop your own
opinions (go to http://www.dejanews.com/ and search for "STRAW POLL").
If, after reading the public discussion, you still remain undecided, you
may abstain from this opinion poll. You may do so informally by not
participating in it at all, or formally by explicitly voting "ABSTAIN"
for all of the newsgroups.

IMPORTANT VOTING PROCEDURE NOTES:

Standard Guidelines for voting apply. One vote per person, one account
per voter. Votes must be mailed directly from the voter to the votetaker.
Anonymous, forwarded or proxy votes are not valid. Votes mailed by
WWW/HTML/CGI forms are considered to be anonymous votes.

Vote counting is automated. Failure to follow these directions may
mean that your vote does not get counted. If you do not receive an
acknowledgment of your vote within three days contact the votetaker
about the problem. It's your responsibility to make sure your vote
is registered correctly. Duplicate votes are resolved in favor of
the most recent valid vote. Addresses and votes of all voters will
be published in the final voting results post.

HOW TO VOTE:

Extract the ballot from the CFV by deleting everything before and after
the "BEGINNING OF BALLOT" and "END OF BALLOT" lines. Don't worry about
the spacing of the columns or any quote characters (">") that your
reply inserts. Please, DO NOT send the entire CFV back to me!

Fill in the ballot as shown below. Please provide your REAL NAME and
indicate your desired vote in the appropriate locations inside the ballot.

When finished, MAIL the ballot to: < voting@clark.net >
Just "replying" to this message should work, but check the "To:" line.

Examples of how to properly indicate your vote:

```
[ YES ] example.yes.vote
[ NO ] example.no.vote
[ ABSTAIN ] example.abstention
[ CANCEL ] example.cancellation

DO NOT modify, alter or delete any information in this ballot!
If you do, the voting software will probably reject your ballot.

If these instructions are unclear, please consult the Introduction to
Usenet Voting or the Usenet Voting FAQ at http://www.iki.fi/~jpatokal/uvv.

======== BEGINNING OF BALLOT: Delete everything before this line =======
.--------------------------------------------------------------------
| 1ST STRAW POLL: rec.radio.amateur.* reorg
| Official Usenet Voting Ballot <RRSP-0002> (Do not remove this line!)
|--------------------------------------------------------------------
| Please provide your real name, or your vote may be rejected. Place
| ONLY your name (ie. do NOT include your e-mail address or any other
| information; ONLY your name) after the colon on the following line:

Voter name:

Hi,

My son is taking a trip back to the US to see family. The stops on his trip
will be Orlando, Alexandria Va, Rehoboth Deleware and Philly.

We are from Philly, so that is no problem.

I would like him to take a R/S HTX-202 with him and use it on his trip.
Can you recommend any repeaters in or near those places that would be okay
for a 15 year old?

TIA and 73,

Geoff.

I have never said anything of the sort. Only commenting on what I have seen posted elsewhere and what I hear on-the-air.

4878. Effectiveness of DC Station Ground?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-15 00:00:00 UTC
From: paul.knight@prairiecomm.com
Message-ID: <6m3ce1fqu1@nnrp1.dejanews.com>
Source record: 169683
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Hello! I was wondering if there is a maximum length of wire beyond which a DC station ground becomes ineffective. Not the RF ground, but the DC ground. I'm in the process of connecting my rigs/amps etc. together with 1" wide grounding strap, which I will then solder to a cold water pipe in the basement (the shack is on the 1st floor at the moment). Unfortunately, I have quite a run from the shack to the nearest pipe (about 10'), and was wondering if that will still be acceptable for a DC ground.

Thanks & 73,

Paul WD8DKY

(my emphasis)

I don't think soldering is advisable for ground straps. The current involved will destroy solder instantaneously. I think you should make a very good mechanical connection - they make copper pipe connections for this - you can get them in any hardware store.

Editors/Bulletin Stations: We'd appreciate any additional publicity you could give to this event. The announcement arrived too late for use in The ARRL Letter, Vol 17, No 24. Thanks!

~~~~~
The ARRL is sponsoring a southeastern regional public service conference, in conjunction with the ARRL Georgia State Convention, Atlanta, Saturday, June 20, 1-5 PM, at the Georgia International Trade and Convention Center. Representatives of regional served agencies, ARES/RACES officials, a communications officer from National Red Cross Headquarters, Hurricane Watch Net Manager Jerry Herman, N3BDW, and Field Services Manager Rick Palm, K1CE, will offer brief presentations.

The objectives of the conference are to strengthen the relationships among Amateur Radio public service program volunteers, the agencies they serve, and the ARRL Field Services Department; and to identify the specific needs of served agencies and the corresponding capabilities of Amateur Radio service providers in the 3-5 year time frame.

Conference hosts are Georgia ARRL Section Manager Sandy Donahue, W4RU, and Section Emergency Coordinator Tom Rogers, KR4OL.

For more information, contact Rick Palm, K1CE, at ARRL HQ, 860-594-0261; e-mail rpalm@arrl.org.

Is that still true (about the Handbook)? I know it was 20 years ago. Nearly
every RF engineer had one on his shelf (and many hams did too). But I doubt
it is true today. An informal check of the books on my colleagues' shelves finds
few recent Handbooks.

Paul, the wire tables in the Handbook show the resistance per 1,000 feet
for common wire gauges. The strap you're using should be less resistive
than #8 wire. That has 0.64 ohm per 1,000 feet. So for a 10 foot run the
resistance will be less than 0.00064 ohm. That's negligible for any DC
fault current you're likely to encounter. (Note, lightning is *not* DC, so
don't assume this would be an effectively perfect connection for lightning
protection. You *must* include the inductance of the conductor for that
purpose.)

Also, the National Electrical Code *forbids* soldering as a means of
attaching a grounding conductor to a grounding electrode. You *must*
use an approved mechanical clamp. The reason is that a high fault
current can melt a soldered joint and allow the ground to open circuit,
removing the safety protection it provides.

Jim,

I agree in part, but how about a little less caffeen, eh? BTW, the Guam call scam stuff was hysterical!

As to the code issue, I think it's a bit silly to require it in the digital age. Granted, there are rare cases where CW will get through when other modes fail, but I really feel it represents the snobbery of certain egotistial individuals (who I will not attack).

Recently, I passed all the written tests through Extra, and the 5 WPM code test for my Tech-Plus license. I'm now working on 13 WPM for the Advanced. When I get it, I won't feel (or be) superior in some way to other hams. I'm just doing it to have fun and achieve a "personal best." I just wish some other hams felt that way -- I've sure have met some snooty ones!

4890. Re: Installing a mobile antenna on a 4x4 light bar?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-15 00:00:00 UTC
From: cphillips@engineer.com
Message-ID: <6m3s21$8mo$1@uuneo.neosoft.com>
Source record: 169695
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I have a 1987 Nissan Pathfinder 4x4 that I purchased used in
1990. Not knowing how long I would keep it, I didn't want to
punch a hole in the roof, so I installed an after market,
permanent luggage rack on the roof (it looks very much like
the luggage racks that Ford uses on the Explorer).

I installed a 3/8" x 24 threaded type mount for an antenna,
bolted to the luggage rack. (The idea was, when I sell the
vehicle, I'd take off the mount and put black bolts in the small
holes. A buyer would have trouble telling the "antenna mount
replacement bolts" from the bolts that are an integral part of the
luggage rack.)
Because I have parked under a parking deck since I got
the Pathfinder and the antenna mount is on top of a tall
vehicle, I most often use a 19" 1/4 wave two meter antenna
(and more recently, one of the 18" 2 meter/440 Mhz antennas).
It has worked fine,
both when I was in Raleigh, NC and traveling around
North Carolina through not-so-densely populated areas,
and now since I have moved to Houston.
I do have a tall 5/8 wave 2 meter antenna that screws into the
same mount. I keep in it in the truck so I can use it for
greater range when I'm traveling (and away from the parking
decks), but I don't put on very often because the quarter wave
works quite well.
My luggage rack is permanently affixed to the roof with
screws, so it is well grounded to the roof, but if you are
sure to ground the light bar well, I'd think your set-up would
work as well as mine.

BTW, the Pathfinder now has 185,000 miles on it, so I think
the "hole in the roof" issue would have been a moot point
on resale. :-)

Thanks Curt!

A bit more info, if you don't mind. Could you elaborate on the mount?
is this a motorola type mount, or a BNC like the japanese antennas

use? Also, does the 1/4 wave 2 meter require a ground plane or just an electrical ground? If a ground plane is required, how does your rack serve as that? or is it just the proximity to the roof that serves as the ground plane?

thanks so much,

For the moment let's pretend that this story is not only for you, but about you!...It's a dark,crackling - clear, cold night - perfect fishing weather and you're "fishing." But it's a special kind of fishing!

You're seated at a table before a black box. It looks heavy, mysterious and important
Suddenly a bite! "Kon-Tiki...Kon-Tiki
Your probing of the night's radio waves by means of the dials on your receiver has picked up the life-line of a handful of men drifting on a raft at the whim of the Pacific Ocean winds and currents.

Out there are six Norwegian scientists, trying to prove that the Pacific islands were populated centuries ago by ancient tribes from the Americas who drifted there on crude but sturdy rafts. To tell their story as they drift along
And here's a vital message now
As this first word from Kon-Tiki snaps out of the night, your hand jumps to the code sending key and taps out "CQ, CQ" as you probe the air for another radio man with whom to play "pass-it-on." It's a vital game you're playing.

Then your searching call of CQ is answered
As the days go by you become a part of a regular world-wide reliable communications network that develops to handle vital Kon-Tiki contact with the interested, anxious world.

Why
You are an Amateur Radio Operator...a "Ham"! Just think of it
Why, any time' of the day or night you can talk to friends practically anywhere in the entire world
For you, at the moment
For the novice license, only a small amount of technical skill is required, and the code rate necessary is only 5 words a minute
Now, summing up in "1-2-3" order, here's why you should be an amateur:

...An amateur's neighborhood is the World
...and right here at home there's your local "Ham" club
...Any you can carry your hobby into business, for radio is the foundation stone of many a professional radio man's career.

...And for you men with your military or naval service still to come

I don't think that series of callsigns were even contemplated by the FCC,
let alone issued, during that time period. Callsigns then were all W and K
prefixes, and possibly N beginning maybe in the mid or late '70s.

In fact the biggest legal amps do not a great amount beyond "running barefoot." Remember that one S-unit equals 6 dB. To go from S3 to S7 is 24 dB. That's the same as increasing your output power from 100 W to 40,000 W, which is FAR beyond legal. However, you can be sure that the local electric utility will enjoy collecting your monthly bill!

Carl,

I had a chance to think about your complaints regarding
the web page I have at my home page about NCI. I did the page
late one night, and didn't really spend enough time thinking
about the contents or about what I was doing. I am sincerely
sorry you didn't like the results.

Now that I have had a chance to think things over, and
spend more time reading the page myself, I decided that
you were right, it really need to be cleaned up. Thanks
for the suggestion.

I have done a major clean up job, and I hope you like
the all new NCI page much better than the old one.
I think this one will be better suited to your tastes,
at least I sure hope so.

http://www.qsl.net/kh2d

and as before, just click the NCI button. Drop me an email
and let me know what you think ! Thanks.

73, Jim KH2D

Mike, I want to join one of your many clubs - the one where I can wear my old military battle dress utility (BDU) uniforms and run around in the woods.

Please send me a copy of the constitution, by-laws, and the club roster with club officials annotated as to their position. Reason: I need to be sure that that I know exactly what I'm getting into. Oh, how much are the dues?

Lets synchronize our watches now...hack!

Sorry about confusing A school with C school.

For the Aerographers Mate, C-School was not equipment - it was theory/knowledge. Upon graduation, there was a $20,000.00 bonus (1982 dollars).

If LaFon made it to Chief and 20 years, he's getting about 15K/yr for learning the code and radio theory.

But the rest of us just need to "shut up and learn the code."

2 kits, built in last few weeks, in excellent condition, work flawlessly
in
there matching enclosures, with all instructions, Need to raise money
to finance A new Sony Scanner.
1. MODEL FR-1 FM Broadcast Radio has the tap for SCA., works great
very sensitive reciever, picks up many many Fm radio stations
Original price new $24:95 Case $14:95
2. MODEL TG-1 Tone Grabber DTMF Decoder Kit, Very COOL device
Plugs into your scanners ext speaker jack and when you scan
cordless
phones, and someone gets a dial tone and dials a number, this thing
instantly tells you what number they dial, Many uses.
Original price new $99:95 Case $14:95
These can be seen at Ramseys Web site Ramsey.com I think
Paid $155 new. Would like to get$100 for all and I will ship .
Thanks
David

That twinkie wouldn't like it if we all beant over and our wallets fell from our asses into his safe deposit box. He wants to be W5YI the second. A real get rich quick scam artist piglet by-product of ham radio in the 70's. Tandy liked W5YI and his "Ham It Up" crapola so much they ditched him for ARRL.

Burnt (Carl, you're the twit, you left coast twinkie)

Yes Dave, the novices and tech's spend lots of time SW listening because the novice/tech CW subbands are devoid of any amateur operating, and they get to actually talk to other folks about every 11 years on 10M. Major return on investment for 4 months of CW tapes.

> > As for "fun", I do plenty of tough things that I think are fun. I do

>

Dave, over the last 30 days, how many hours (ok, minutes) have you spent on the learners permit bands? How many qso's have you had with the learners? So we learn the basic code from the tapes and get on the air so we can get to 13 or 20 wpm and be "REAL HAMS" - then our Elmers don't show! Your are "growing" a bunch of code tape Generals/Advanced/Extras that have NEVER operated CW. Congratulations!

Put up or ... quit whining about the eventual coming of the no-code HF license.

Watch out for this guy and his company called DIGITAL ANXIETIES

James Dono 6482 Maple Ave, Swartz Creek,MI 48473 (810)635-2987

He will take your money for a product,,,,,that to date has not been
received
He will never return your phone calls, you just get an answering machine
I have called him and the girl that works with him 11 times so far with no
results

The distrect attorney has received a complant from our attornies about this
guy

IF any of you have lost money from this outfit, let me know.......

This will be the most trouble he has ever had for the $ 250 he ripped us
for

He has ripped off many others as I have received 37 Email letters from
other
poor fellows that trusted him......either the stuff didn't work or they
didn't receive it
and when confronted at a hamfest, was forced to make good..........

This is sad that there are companies out there that operate like this......

Dont deal with this outfit...........

* *

The fact that we are ALL spending so much time on this
newsgroup proves that we are ALL losers!

I suspect that if we had someplace better to be, then
we would already be there. In life, there are always
winners and losers. I think all of you know
which one of those two groups we belong in.

So keep up the filth and the uneducated redneck banter!
I find it an entertaining interlude in my otherwise boring and
miserable failure of a life.

DUWAYNE HICK [of the Arkansas Hicks]

I don't know thier breakage ratiom compared to others (so far
the only HT's I have are the HTX 202 and 404 (it discontinues 440
cousin, but the warranty was another 50, each has been into the shop.
the 404 because of typo in the manual (I was trying to access a closed
repater with a pl tone and was pulling the wrong meaning out of the
Manual) The 202, and I, got real code, and something went out of
tolerence, and froze. It was repaired no charge, and you they knew
it and I had gotten really cold.

There acceptable way's condictions that would be legal but
third party. No way. Giving the nonham the ht and saying that if the
car conks out, use it could be legal under emergency rules. A radio
of mine is modified with a controller that allows me to turn on the
transmitter, with a dtmf tone, and to turn it of (it also rests every
three minutes too if it doesn't get pl tones) puting it into a mode
where every transmission of mine can be answered (til you time out at
three minutes) and a closed repeater of my tranmissions(for id)
>
>I don't understand how this is within the rules, since the other station is

I am sure this isn't allowed within the rules. The FCC may not
care about it either.Maybe it should be legal, or the FCC should care,
but those are others issues.

Has anyone tried using the QST CD-ROMs on a Mac, using either SoftWindows or VirtualPC? I wonder about using a Mac CD drive, they are supposed to be compatible with SoftWin and with Windows CDs, but you know. . .I have been using Acrobat and some other apps, and I can read and print individual files fine, but can't browse or search like I could using the QSTview app.

I traded in a Kenwood ts940 for one. I could do without a few of the
bells and whistles (I don;t care what they say, the scope on both the
746/56 is worthless). In comparison, the size..a far better receiver, the
internal IF DSP, the stacked band buttons, the general layout. A very
fine package compared to what I had, and what I had was top of the line
many moons ago.

Not the most technical reasoning but still, a satisfied user Have fun

4918. Question about 10 Meter Operation

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-15 00:00:00 UTC
From: Michael1998@webtv.net
Message-ID: <6m4j5j$39k$1@newsd-113.bryant.webtv.net>
Source record: 169723

I enjoy operating on 10 Meters. Often when I talk to people on 10, they mention a number called a "springbok" and "Chesapeak Bay" number. My question is, what are these numbers, and what do they refer to? I am familiar with 10-10 numbers, but not these numbers. Can someone please e-mail mail and let me know what these numbers refer to. Also, I am looking for any reputable dealers where I can order good quality QSL cards, if anyone knows of such dealers, let me know, also if they have a web address, I would love to have it.

Thanks!
Mike Brown KD4UXW

Howdy Mike --- these are offshoot numbers from 10/10 Chapters. Here is a
quote from the 10/10 pages:

"Chapter Activity and Paper Chasing --
10-10 has numerous local chapters all over the world to encourage local
activity and provide other
avenues for contacts among 10-10 members. For your convenience, we
maintain a list of chapters
and the names and addresses of their heads and their certificate
managers.

One popular 10-10 activity is collecting and upgrading operating awards
(certificates) sponsored by
various chapters of 10-10." (unquote)

There is a list of Chapters there as well, including "Springbok" and
"Chesapeake Bay".

For this and more see URL:
http://listserv.lehigh.edu/lists/tenten-l/

The 10-10 members data base is at URL:

I like it! As an Advanced-class ham who spends virtually zero time in
the "general+" CW bands (I work almost exclusively 80M novice CW) I never
seem to have a lack of people to talk to. I feel *all* higher-class
ops should spend some of their time "in the trenches" helping those
who have shown an interest in doing code to get their code speed up
to snuff. They can't do that if they don't have us to help them!

>damages must be proven. I don't think there's been much of a monetary loss
>to
>the fine fellows mentioned on the Web pages.

Damages do not have to be monetary. Libel cases have been won against the tabloids, for example, in which damage was determined to be emotional,...public humiliation, damage to personal reputation, and the like. Carol Burnett's suit against the National Enquirer comes to mind as an example. There have been others since.

Libel on these pages need not produce damages that can be measured in money. But such a case would still have to prove willful intent to damage, and be profitable before it would attract much legal attention.

Actually MD I have no problem with being a member of NCI and I have actively recruited several new members recently and they are well pleased with the organization. Steves' website is probably a good place to refer potential members too as an example of what kind of prestigious is out there regarding the new Amateurs entering the ARS today and why NCI is working hard to be representative of all Amateurs in the ARS today and not just a few license

classes. Do I worry about my membership in NCI, no I don't because too many people like you and Steve seem to be doing the worrying for me.

One way is to find a copy of the Callbook from this era. I found the previous
holder of WA2ISE this way, someone who lived in upstate New York state.
Made no contact, my curiousity didn't go that far.

Mike ... NOTHING of what Jim shows (in most cases, COMPLETELY
out of context) "happened within NCI" ...

Your (and Jim's and Steve's) lame attempts to "connect" my personal
arguments with rabid procoders such as yourself to NCI are absurd
and totally baseless and you know it ...

You are simsply playing the old political game of muck-raking
in hopes that some can be duped by your tactics, plain and simple.

> I guess
> that is what you get when a bunch of people trade their morality for
a
> free HF handout.

Your characterization of the members of NCI in the sentence above is
SURE to enamour you to them ... keep up the good work.

Jim questions the credibility of NCI as an organization. The questions he raises are not answered at the NCI website. Some questions he attempts to answer while the rest are pretty much "Why?". There are plenty of mailto tags on the site, so it seems Jim is looking for answers to the questions.

It seems Dave only scanned the site missing
-begin quote-
Your next question is - were the above quotes taken 'out of context'. Yes, if the purpose of this dissertation was to involve the reader with the content of the discussions that were taking place. That is not the intention. The intention here is show Mr. Stevenson's style in dealing with his fellow amateur radio operators.
-end quote-

Jim does admit:
-begin quote-
I have embarrassed myself (2 s's Bill) by using some pretty bad language at times in Usenet, which was one of the prime reasons I discontinued my participation in the discussions. But here's what has me confused.
-end quote-

I can understand the confusion. Jim wonders why he is embarrassed enough to stop participating and yet neither the membership or BOD of NCI seem to be concerned with wa6vse's conduct within the usenet community. I'm a little confused as well. Is this the public image that NCI wishes to promote? It is obvious that if wa6vse were not a member of the NCI BOD, Jim's NCI pages would be considerably smaller and not as negative.

Let's see your original design for an RFI filter, explaining the
role each component plays, and how you came about choosing the
particular values of those components. An ASCII drawing will be fine.
Include all specifications and explain how you obtained such specs.

>or even a possible, answer. Just trying to bring some perspective to this
>kW bashing orgy.

Right on, Gary. This kw bashing orgy would never actually happen on the air because most signals from the pipsqueak stations couldn't be heard.

It has been interesting to note the many responses and most everyone with a stance makes a good case, especially in the context of what he finds personally satisfactory. Really I couldn't begin to tell someone exactly what he needs in terms of equipment, antennas or operating philosophy to achieve his own satisfaction. In the event David or others just getting into amateur radio or thinking about it have been reading these posts, my suggestion would be to start simple and build from there if you choose to. As you can see, there are any number of ways to derive enjoyment from sending and receiving radio signals!

All of this got started by David asking how much power he needs for "normal" ham radio use. That trick word "normal" opens up a can of worms, doesn't it? Normal becomes whatever the individual amateur makes it.

Dear Burt,

Eventually I hope you will consider checking yourself into a program
which offers the help you need to move your life forward. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you are under care.

Please don't listen to those who talk as if they know you and your family
personally,
as I'm sure none of the things they say about your past is true. You,
with the proper guidance and care, can forgo your preceived necessity
to utter vile and demeaning things toward others.

Hopefully you will take this is the spirit in which it is written and
close this dark chapter of your life and brighten your own and your
loved ones lives as you move to the future.

Wishing you the best.

Dear Burt,
Eventually I hope you will consider checking yourself into a program
which offers the help you need to move your life forward. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you are under care.
Please don't listen to those who talk as if they know you and your family
personally,
as I'm sure none of the things they say about your past is true. You,
with the proper guidance and care, can forgo your preceived necessity
to utter vile and demeaning things toward others.
Hopefully you will take this is the spirit in which it is written and
close this dark chapter of your life and brighten your own and your
loved ones lives as you move to the future.
Wishing you the best.
7 3

There is a link to a German language translation of NCI's main
page on NCI's main page.

One of the NCI directors is German and translated the main page
into his native language for the benefit of his countrymen.

I know the details because I placed the link on the NCI page.

BFD. It's amazing the lows that people to go to to slander what
they fear ... and we all know how much pro-coders fear the impending
end of code testing.

Source record: 169580

* *

YOU SURE GOT THAT ONE RIGHT!

Remeber when the ham antenna (although not
universally appreciated) signalled the "high-tech"
area of the neighborhood. At that time, some folks
actually appreciated and respected the technical "know-how"
possesed by the Amateur Radio operator.

Now...if you dare put some aluminum up in
the air, you become the neighborhood pariah and
run the risk of some sort of litigation. At the very least, the
neighbors give you funny looks and warn their kids to
stay away from that house down the street. 'twasn't always thus!

I used to be proud to list my ham license on my
resume. Not anymore! Now I leave it off, for fear
of some hiring underling marking me as some sort of weirdo.
Again, 'twasn't always thus!

Things have changed! Ham radio is a thing of
the past! AND...this newsgroup is where all of
us preside over the fall of a once noble hobby.

If you're going to visit the low spots to wallow
in the slime, then you might as well get serious
and go all the way. This group is a GREAT
place to start!

Source record: 169589

Although it is conterintuitive, copyright law is such that a printed item need not carry a copyright notice to be protected under the law. Publishers are explicit about copyright as an added measure of protection. Thus if an item has a copyright notice, a person copying the material can't claim that they didn't know it was copyrighted. An author doesn't even *need* to formally register a work with the Copyright Office anymore to claim copyright, not since the copyright convention in 1974. To assure yourself full protection under U.S. law an author must send him or heself a notarized copy of the work via certified mail . It is still a good idea to both print a copyright notice, and to register formally, especially if the work may have commercial value. It is also a good idea to assume that a printed manual or any other printed matter *is* protected under the law, especially if you are considering commercial distribution of the item.

4956. FBI Wants National Gun Registration under BRADY

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-17 00:00:00 UTC
From: Curtis M LaFon <n5hdq@wf.quik.com>
Message-ID: <35889B87.38D15FC9@wf.quik.com>
Source record: 169590

So what does this have to do with Ham Radio .. Hams can
own guns .. that's what.

Now .. The FBI is gonna try to keep gun sales records for
18 months starting in November .. In addition they are
gonna try to charge a $30.00 fee for the so called instant
check, which now they say will take 3 days. This is all under
Brady Law.

There is a bill floating around (HR 2721) that will repeal
Brady and end all that crap. Two weks ago the bill had
four sponsors, now it has 11. If you want to contact your
Rep and ask him/her to support it go to my site, take the
Gun Page then click on 'Help Repeal Brady'.

There is an Email I received from Gun Owners of
America in the Help Repeal Brady file with links
that make it easy to Email your Rep. It also shows
who is signed onto the bill.

DO IT NOW ...!!!!!

--

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I could not think of anything witty to say here.
So I plagiarized Lee Taylor.

If ignorance is bliss,
anti-gunners should be the happiest people in the world.

I am still awaiting the TM-241A promised to me in a trade (I fulfilled my half) by KB8MCZ. This is the last E-mail I ever received from him (he has ignored E-mails and First Class Mail) "ok,sounds like a fair trade,lets go ahead and do it. Send each other the tracking numbers. DAVID T GARDYNIK N 8196 STATE RD 187 SHIOCTON,WI 54170"

I even know to whom he sold the radio he owes me, and that buyer had to repair what he was told was a perfectly functioning rig!

I guess we just have to expect some bad apples in every basket and write it off to life in an imperfect world! Sorry for the apparent raw deal you received.

I would like to interface a Motorola Spectra (one piece, no detachable
head, conventional UHF) to a TNC and so I need to get the pinouts for the
rear connector
such as PTT, Mic Audio In, Audio Out, COS, etc.

Can anyone help?

Thanks

>most hamfests.

I found out something interesting about this sort of mount at UHF.
At VHF/UHF the typically very thin dielectric around the stud can
make it a dandy feedthru bypass capacitor. I bought a 1/4-wave 70 cm
groundplane made using this sort of mount and discovered I couldn't
get a reasonable SWR out of it. In fact, removing the whip entirely
made very little difference.

There was sufficient capacitance between the stud and the body
of the mount that the mount was an effective short at 70 cm. At
28 MHz, the mount worked reasonably well. So this is a cautionary
message. If you try a CB stud mount and you can't get a good
SWR on VHF/UHF, consider that the mount may be acting as
a feedthru bypass capacitor at these frequencies and giving
you what is essentially a short circuit.

If you are buying a stud mount, look for one using the thickest
dielectric you can find to reduce this problem. Some of the
CB stud mounts use a paper thin dielectric.

4971. ***TRADE: MISC EQUIPMENT FOR SW RCVR W/SSB***

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-17 00:00:00 UTC
From: teenham@aol.com
Message-ID: <1998061715210900.LAA11725@ladder03.news.aol.com>
Source record: 169632

Hello there...

I have the following equipment I would like to either sell, or trade for a digital readout shortwave reciever with SSB such as the RS DX-390 or something of that type.

Radio Shack PRO-2009 Base Scanner. VHF/UHF Direct Entry Programmable Scanner. 10 channel memory, Digital PLL Frequency Readout, Search feature, Freq Coverage: 30-50 MHz, 144-174, 410-512 MHz. Made in Japan. Includes AC cord, and telescopic antenna (the manual is found online at www.radioshack.com). Works fine, good condition. Catalog Number 20-109

General Electric UHF HT. 2 Channel Capability, CG Mode (Channel Guard, like a PL Encode/Decode.) Channel one currently set to 466.437 MHz, channel two not set. Includes rechargeable NiCAD battery and UHF Rubber Duck antenna (also BNC connecter for base/mobile antennas.) GE MPI Series. Works fine, but battery needs charging.

Radio Shack Digital-Tuning 4 band AM/FM/SW Reciever DX-370. Freq Range: 530-1710 kHz, 3.2-7.3 MHz, 9.5-21.75 MHz, 87.5-107.9 MHz. Digital PLL frequency readout. SW reception is AM mode only. Low battery warning, LCD "tuned" indicator. 20 memories, 24 hour LCD quartz clock with sleep timer and alarm for waking. MINT CONDITION, no scratches WHATSOEVER. Have orginal box, packaging, and manual. Small size. Requires 4 AA batteries. Catalog number 20-211.

Motorola Spirit VHF Recievers. Two recievers, both currently set to 138.325 MHz, both include Rechargeable NiCAD batteries, and charger. Work great, very good condition.

If you have any offers, please email me. Like I previosly stated, would like to trade for a SW reciever with SSB or sell (would rather trade, though.) Or if you have anthing else of interest to trade, email me.

Thanks, 73,
Eugene D.

>Thank you for any help.

Its a common problem. The display is fine. The problem is the
connector between the display and radio. The connector mate on
the radio is surface mount that tends to break loose.

I fixed mine by jumpering connector wires directly from display
to radio with 26 guage wirewrap wire. Its very tiny area to
work in and requires steady hand and magnifying glass to
solder to surface mount pads.

: David Stout wrote:
: >
: > Does anyone know how to figure how long a gel-cell will last if you
: > know
: > what your power needs are?????????
: >
: > Thanks
: > DRS

I would add another caution. I have been testing two different
manufactures gel cel batteries to verify the capacity rating. These
are batteries in the 85 to 95 amp-hr range. Neither were meeting the
rated capacity using the manufactures specified charging profile.
After many phone conversations and faced with quantified data on the
charging and measured capacity, they admitted that the recommended charging
profile is a compromise between capacity and battery life. Another words,
if you use the charging profile they used to measure the specified
capacity, the battery life is shortened. If you use the profile they
recommend in the data sheet, you will not get the rated capacity.
One manufacture said to expect only 90% of the rated capacity
with the recommended charging profile. I was getting closer to 85%. I did
come up with a modification to the recommended charging profile that I
think will not shorten the life too much and it does produce 90% of the
rated capacity.
So I would suggest getting a battery that is 15% to 20% larger
than your calculation would indicate.

Derek Toeppen
WA0ZTI
derekt@col.hp.com

: The gel-cell will be rated for the number of ampere-hours of charge it
: can produce. This should be printed on the battery. (If not, compare it
: to other gel-cells. It'll have about the same rating as another one of
: the same voltage and physical size.) Divide your power requirement by
: the battery voltage to determine the current you need. Divide this
: number into the ampere-hour rating of the battery to find the number of
: hours it will last. For example, if your power requirement is 12 watts
: and you're using a 12 volt battery, the current is one ampere. A five
: ampere-hour battery would last about 5 hours, a 10 ampere-hour battery
: ten hours, etc.

: Three cautions: First, the ampere-hour rating is only valid at a
: relatively low current -- one that takes about 10-20 hours to discharge
: the battery. For the example above, a 5 ampere-hour battery has 5
: ampere-hours of capacity only if discharged at a rate of 250-500 mA. At
: higher currents, the capacity is less. You'll need to consult the
: manufacturer's data to determine how much less. (In the example above,
: the 10 ampere-hour battery would probably last close to 10 hours at a
: one ampere discharge rate. The 5 ampere-hour battery would actually last
: somewhat less than 5 hours.) The second caution is that the rating
: assumes that the battery will be discharged to some specific voltage,
: typically around 10.5 volts for a 12 volt cell. If your equipment quits
: working at, say, 11.5 volts, you won't get all the capacity out of the
: battery. Third, these batteries tend to deteriorate with time, so if
: it's been around for a while, it may not be able to deliver its full
: rated capacity.

: Roy Lewallen, W7EL

You're correct in that you're not supposed to talk to him, but you
can freely talk *about* him to the others on your freq'y:

"Say Joe, I believe that other station might not realize he's
transmitting in the 10m amateur radio band and that he needs a
government license to be operating here. If he shows up at our
next club meeting on June 25th at the Cafe at 7:30 pm, we can
introduce him to ham radio and help him get licensed. Over"

> <<>>

Fine. Keep your rifle, but *eventually* we'll have you surrender your
handgun or face prosecution.

To TheLibNet@aol.com
You above of all the trash that lieing covert62 posts then lies again
to say its the truth. The person behind covert62 can't even form a
opinion about anything. If someone posts anything of value covert62
always has to post crap about that person. I personaly don't approve of
the way that covert62 acts in this Newsgroup. I would think that person
with as much of a opinion as you have would understand where I'm coming
from. You and I may not agree on a lot of issues but one thing I think
we both agree on is that where libel starts free speech ends. This
covert62 person is full of nothing but libel.

Thanks Curt and Gary. Now given what you have experienced, tell me
this; Do you think a standard motorola mount would perform well with
a 1/4 wave two meter antenna, mounted to a light rack of the type that
connects to the rain gutter on a toyota 4x4 truck, and would the
prescence of off road lights on said rack affect or be affected in any
way?

Thanks for your help,

Take the front panel off the radio and spray some switch cleaner on the small SMD connector connecting the display board to the main CPU board. This usually works. I also had a few in for repair that required delicate re-soldering of the SMD connector on the CPU board so check carefully if it has come loose.

4995. Authorized to establish and operate.....

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-17 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <6m999e$gt5$1@nnrp1.dejanews.com>
Source record: 169656

I love kids. N0PGL and I raised 5 of 'em, and they in turn have
managed to give us 10 grandchildren so far.

So I was delighted to see, "Up Front In QST" in July QST, the photo of
two cute, well scrubbed, well dressed, 4-year olds who recently became
licensed via a class in conjunction with their Sunday School (which
apparently turns out a lot of young hams in this same age group).

But the more I think about this picture, the more uneasy I become.

Those two charming children are now empowered to independently
build 200W and 1500W radio stations and join us on the air
on HF, VHF, or UHF. The conditions of their license do not require
any assistance in building, maintaining, or operating their radio
stations.

I can imagine that an occasional "prodigy" might come along who, at
age 4, could become qualified to establish and operate an amateur radio
station, but the typical 4-year-old can't even handle "Dick and Jane"
for a couple more years, and damnsure shouldn't be servicing a 1KW
amplifier!

§97.503(b) describes (in part) the standards of the examinations:

"A written examination must be such as to prove that the examinee
possesses the operational and technical qualifications required
to perform properly the duties of an amateur service licensee."

I wish these two newcomers a long and rewarding association with the Amateur
Radio hobby, but if pre-schoolers can routinely pass these written
examinations, then the FCC and VEC's need to rethink the qualification
process.

That's the theory, anyway. In practice, however, such detection requires a very sensitive device. And depending on the construction of the tape recorder, very short range listening. Some detection devices key on a multitude of electronic signatures, but they can be blocked by turning on a microwave oven in the house or apartment next door.

The REAL recorder detectors are not likely to be advertised, nor are they likely to be affordable.

What you can buy on the street, or in so called "spy shops" is not likely to do much for you than aid in your weight loss program starting from the wallet---in.

The radio store is called "Amateur Electronic Supply". AES for short.
Here is the info on it:

Located at 1072 N Rancho Dr, a short drive from the Downtown "Casino
Center" and "The
Strip", about five minutes away from the intersection of Interstate 15
and US-95 expressway, AES
Las Vegas is a convenient stop during your vacation or convention stay
in "The Entertainment
Capitol of the World".

AES Las Vegas carries a complete stock of Amateur Radio equipment,
with HF and VHF
transceivers, amplifiers, antennas, books and publications, hand-helds
and all accessories, with most
models on display for your inspection.

AES Las Vegas hours are weekdays 9:00 AM - 5:30 PM, and Saturdays 9:00
AM - 3:00 PM,
Pacific time. The Las Vegas Radio Amateur Club sponsors a monthly swap
meet in the parking lot in
front of the store - it's held on the first Saturday of each month, and
runs from approximately 7:00
AM thru 10:00 AM.

Las Vegas keeps a fully-qualified technician on staff, and we do
service on most items of Yaesu,
Icom, Kenwood and Alinco equipment sold by any AES store.

These are two of the most active repeaters in the Las Vegas area.

146.88 - Open 100hz Mount Potosi
146.94 - Open 100hz Tropicana Hotel

For any special requests, contact the Las Vegas Manager, Squeak, AD7K.

Here's the staff at AES Las Vegas..

: > > to send the manual to him for the cost of copying and air mail postage.
:
: Hmmmm, it seems to me that the act of copying a manual which is copywritten is
: as criminal as the person not sending you the check. Guess we should list
: you as a thief to all on the usenet groups, too.
: john

Lets not water down the facts ok.... If this person had come to
court to have this case heard the statement you just brought up
would of been thrown out (objected)... I OBJECT to you're coment
on the legality of the copywrite status.

The point of his post was to warn everyone....

It doesn't matter if the material was copywrited or not, the bottom
line is that the person never kept his end of the deal, he never sent
the agreed upon ammount of money for duplicating and shipping of the
manual. This is what is important here, in this thread.

By the members, yes ... by the general population ... not necessarily.

I have seen many told "If you're not a member of the ARRL, don't bitch
about what it does." This knife cuts BOTH ways, Mike ... you are not
a member of NCI, so you have no cause to concern yourself with it.
(except in your attempts to thwart its achievement of its purpose, of
course ...)

> The ARRL is "pro code",
> because the membership via surveys have expressed that view. If I'm
> not happy with that I can run for office and attempt to change it.

Good luck ...

> No-Credibility International is "no code",
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
[gratuitious slur noted ...]

> because in order to "join" you have to agree
> with their "No Prisoners, No Compromise" position on their web page.

NCI has certain qualifications for membership ... that is its right.
It has not stated as one of its goals to be a "general purpose, be all
to everyone" sort of orgainzation ... it's focused on goals and does
not need members who don't share (or worse yet, only seek to
compromise)
those goals.

> But, if I wanted to change that, ooops, can't do that -- no
elections,
> just a bunch of appointed-for-life dictators.

Whoop, whoop ... there are those black helicopters circling your place
again, Mike ...

Seriously ... as Bill and others have pointed out, MANY organizations
function with a volunteer board in their early, formative times ...
your only reason to attack NCI for this is that you oppose its goals.
Otherwise, you couldn't give a rat's backside ...

And NO, as far as *I* am concerned, you are NOT welcome to join NCI
for the purpose of subverting it (my personal view, not NCI board
decree).

Besides, if you don't agree with the goals, why would you WANT to
join? (Oh, yeah, that's right ... to CHANGE it ... otherwise known
as subverting from within ... no thanks.)

> Of course, I understand why you don't particularly like this line of
> questioning,

I don't like your line of questioning because you slander NCI, its
board, and its members with your comments.

I don't like your line of questioning because it's frankly none of
your damned business.

I don't like your line of questioning because I find you to be an
obnoxious jerk who usually has his head where the sun doesn't shine.

Hi,

I'm new the ham radio and I'm interested in using satellite repeaters.
Is this possible with a HT? Can anyone point me to any info
(URL would be nice) on getting started with satellite repeaters?
I'm assuming I can use these with a technician's license. :-)

So, Ed ... it SEEMS that what you are saying is that anyone can do
pretty much whatever they want as a "club" but the minute they *dare*
to "encroach on the ARRL's territory" (the filing of comments with
the FCC and being involved in regulatory matters) they become somehow
"suspect" ??? How DARE you presume to question ANYONE's RIGHT to
comment
before the regulatory agencies of this country????

I'm sorry, but you guys are a total bunch of hypocrites!!!

The ARRL makes a big show of "rallying the troops to defend 440" then
flames NCI (through you and Jon, of course) for commenting ON THE SAME
SIDE OF THE ISSUE???????? We filed comments AGAINST the LMCC, too ...
and we filed them with a great deal of forethought and deliberation
... and BEFORE the ARRL got around to filing ITS comments. This makes
NO sense, except that you (and the ARRL) resent ANYONE who represents
anyone but YOUR members ... this despite that fact that more than 3
our of 4 US hams have refused to join the ARRL ... you guys really
have
a serious case of denial going on WRT your problems and your self-
perceived level of "importance" and "greatness" are considerably
exaggerated.

Yes, NCI only has something on the order of about 700 members at
present, but we are growing rapidly. Yes, the ARRL has about
170k subscribers ... er, "members" ... but that DOES NOT give you
a monopoly on the right to comment to the FCC.

I'm REALLY fed up with your two-faced, hypocritical, pompous BS.

Baloney, Ed ... that is EXACTLY what you and Jon have REPEATEDLY
stated and/or insinuated ... that NCI somehow "overstepped its
bounds" by filing comments with the FCC in "bandplangate" and
the LMCC 440 reallocation matter.

>the ground plane?

The mount is an aluminum bar, with a threaded "stud" on it,
one-half of one originally intended to be used on a mirror (really
for a CB antenna). Underneath there is an SO-259 coax connector.
Many of these types of mounts can be found at truck stops, where
they are sold for CB use by truckers, but there are a substantial
number of ham radio and scanner antennas that also screw into the
3/8" x 24 hole in the mounting stud. (That's 3/8" in diameter,
and has 24 threads per inch.) The well-known Hustler colinear
antenna uses this mount, and compatible antennas can be found at
most hamfests.

A quarter-wave and/or a 5/8 wave both require a ground
plane for optimum performance.
The mount is bolted to the aluminum luggage rack, and the
luggage rack is screwed onto the roof of the truck (and the
hip bone's connected to the thigh bone and the thigh bone's
connected to... :-).

If it were modeled, the luggage rack would be the the
ground plane, although the base of the antenna is only
about 1 1/2" above the roof line, so I suspect the roof
interplays to some beneficial extent. By trimming the

1/4 wave antenna, I got the SWR down to 1.5 to 1, so it
matches pretty well to the radio.
I'm using about 8 feet of RG-58, which is pretty important
when you talk about SWR at 2 meters. Use 100 feet of
RG-58 and you can get 1.5 to 1 on almost ANY type of antenna...
Not because the antenna is good, but with the trememdous
power attenuation of 200 feet (to the antenna and back)
of RG-58 at 2 meters, there's hardly any "reflected power"
back at the radio.

Anyway, remember we're talking hitting repeaters on 2 meters,
a task often performed by glorified dummy loads called
"rubber ducks" (I use 'em too :-). If you are trying to
hit the most distant repeater, you may notice the
difference between the "light bar mount" and the center of
the roof mount. However, if you are in a reasonably
populated area (and almost all of California is
populated, "reasonably" or more :-), you'll be able to
hit plenty of repeaters, even if the antenna is not
optimized to the n-th degree. If you are truly in the
desert (given your e-mail name), a 5/8 wave antenna might
be the better choice (I don't think you'll encounter
too many parking decks there :-).

I use an Icom 2340H with about 40 watts on 2 meters,
and I can hit pretty much everything I can hear with
the quarter wave antenna (at least everything I can hear
well enough to *want* to talk on).

So, it works for me. I think for my circumstances,
an antenna on a light bar such as you describe would be
quite satisfactory, but it all depends on your requirements.

Good luck and 73,
Curt W4CP

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated May 20, 1998 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

JULY 1998

Jul 12 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com.

Jul 19 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. (good, small to midsized hamfest. Modern rest-room facilities. - AJ9S)

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 8 (Sat), Quincy, IL Western Illinois Amateur Radio Club | Quincy, Illinois. Ham Radio and Computer SWAPFEST 1998 | 8:00AM to 2:00PM. The Western Illinois 1998 Swapfest | will be held at the Eagles Alps Grounds (3737 North 5th | Street) 4.5 miles north of downtown Quincy, with easy access | from US Highway 24. Admission is $3.00 at the Gate ($2.50 | in advance) per person, under 12 - Free. ARRL VEC testing | for all license classes at 12:30PM. Indoor Flea Market | space available for $5.00 which includes one 5' table. | Outdoor tailgating space - Free. Talk-in on 147.63/147.03 | MHz. Plenty of convenient parking available. Lunch will be | served on the grounds. Children's playground area. Card | Checking for ARRL awards at 9AM, 10AM, and 11AM. For addi- | tional information contact N9JF, jfunk@adams.net. |

Aug 23 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 tel. 708-944-0500. E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/ (fairly good, small to mid sized hamfest - AJ9S).

Have an Astron RS-20A power supply that is surplus to me. Would like
to trade it straight up for something I could use such as:

Memory Keyer
HF Transmatch
Drake W4 wattmeter
25W synthesized 2m rig (older models that will tune current splits)
Video Capture card for my PC that I can plug a cam corder into
Stack of blank CD-R's
10" Table Saw

or let me know what you have. I am NOT interested in any converted
commercial uhf/vhf FM stuff, have no use for it.

Source record: 169747

AO-27 can be work with HT's (either some dual band or 2 seperate radios), but it isn't easy. AO-27 is the only repeater type satelite I think. Transponders, which take in a siganl on one band and dump it out on another are more common (try http:\\www.amsat.org)

Most sats can be worked with useing Tech class gear, even the A modes that down link on 10M where we lack transmitting preveledges (we can still use those) These require either Morse gear or SSB. Yes FM will work, but is discouraged since it one uses a lot of bandwidth, and two damges the sat (I am not sure why it would, but maybe the transponder power level has something to do with it, I'd love to kno the why of that reason myself)

SSB gear seems hard to find in tech class freqs, and expensive if you do. Most people seem to operate with either fairly expensive stuff or use 10m gear to drive what are called tranverters (they put out a signal on some other band, like the one you want) This is why I haven't tried them myself yet. It is a pity that amsat doesn't seem to focous some advice in getting started on people like you and me, the very newly licensed

5028. Re: Installing a mobile antenna on a 4x4 light bar?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-17 00:00:00 UTC
From: n2brk@aol.com
Message-ID: <19980617041441 00.AAA01202@ladder03.news.aol.com>
Source record: 169748

Just to throw out some other mounting ideas....

I mounted a Screwdriver antenna by drilling the bumper on my Ranger for the 3/8ths x 24 stud, and using one of those eye rings that fit into the stake pocket by expansion, (NO DRILLING) for the top support. Then I used two more of the stake pocket inserts with eye rings to mount a tool box with no drilling to the truck. I mounted my dual bander and 6m antennas to the tool box.

This configuration allowed me to mount three antennas to the vehicle and only use one hole in the bumper.

I hope this helps some more people go mobile without making holes!!!! :-)

Hell, I don't think I could live on that. I guess I could, but it sure as hell wouldn't feel like a comfortable living. Do you KNOW he cn work? A VA doctor or more likely several doctors decided that in their expert medical opinion that he was 100% disabled as far as military service went... and let's face it... today's average serviceman is not in a physically demanding job. If the Army or whatever rejected him due to health or injury, that guy is disabled. He gets his pension just like YOU would if you were a disabled vet, Drew. ☐☐If our vets aren't properly compensated for injury; if they don't have any security; if our backs are turned on them, we will not HAVE aany vets. For the miserly pay, only the truly clueless or the desperate would enter the military without the perks. Half of the benefit of being in the service is compensation and security other than normal pay... In fact I would go so far as to say 2/3. Educational opportunities, early retirement options, re-enlistment bonuses, allowances for housing, etc, base housing and services, recreational facilities for servicemember and his family, flight pay, flight deck pay, combat pay, hazardous duty pay, profficiency pay, submarine pay, flight deck pay, all that stuff adds up, and along with medical, dental, optical, insurance, and reasonable disability pensions keep not only average recruits coming in instead of only the wworst of the hard up, but also a smattering of quality people as well. You give up so much when you join the military that for the base pay alone a man would be a total idiot to join voluntarily. ☐☐If 24K soulds like a lot of money to you, you need to make a career move, I think unless that is all anybody thinks you are worth.☐☐☐☐73 DE AB5VH (Robinson) in San Benito Texas☐A nice little town in the Beautiful Rio Grande Valley☐By the Border, By the Sea☐☐New Ham? The gel-cell will be rated for the number of ampere-hours of charge it can produce. This should be printed on the battery. (If not, compare it to other gel-cells. It'll have about the same rating as another one of the same voltage and physical size.) Divide your power requirement by the battery voltage to determine the current you need. Divide this number into the ampere-hour rating of the battery to find the number of hours it will last. For example, if your power requirement is 12 watts and you're using a 12 volt battery, the current is one ampere. A five ampere-hour battery would last about 5 hours, a 10 ampere-hour battery ten hours, etc.

Three cautions: First, the ampere-hour rating is only valid at a relatively low current -- one that takes about 10-20 hours to discharge the battery. For the example above, a 5 ampere-hour battery has 5 ampere-hours of capacity only if discharged at a rate of 250-500 mA. At higher currents, the capacity is less. You'll need to consult the manufacturer's data to determine how much less. (In the example above, the 10 ampere-hour battery would probably last close to 10 hours at a one ampere discharge rate. The 5 ampere-hour battery would actually last somewhat less than 5 hours.) The second caution is that the rating assumes that the battery will be discharged to some specific voltage, typically around 10.5 volts for a 12 volt cell. If your equipment quits working at, say, 11.5 volts, you won't get all the capacity out of the battery. Third, these batteries tend to deteriorate with time, so if it's been around for a while, it may not be able to deliver its full rated capacity.

5039. Kenwood 241 display problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-17 00:00:00 UTC
From: kd1my@banet.net
Message-ID: <6m852b$o0l$1@nnrp1.dejanews.com>
Source record: 169759
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have two friends that have 3 Kenwood 241 radios. They are all having display problems. Some have gone out permanently but the radio still works.
One goes out intermittently. Does anyone know if this is a common problem with this radio? Is there a fix other than sending it to kenwood?
Thank you for any help.

Mark Morgan <konstans@geocities.com> wrote:

> Why does it take being able having taken the 20 wpm test to give it.

It doesn't. In theory. For example, to get a General RadioTele or a GMDSS license today you take a series of examinations with people who do not have to pass the same tests. In this respect, they are acting merely as examination proctors.

You could make the same argument about VEs -- that they act merely as proctors. However, if this were the case, we could also then have unlicensed people giving ham licensing exams, couldn't we? Since we don't do that, we have established a series of qualifications for VEs. One is that you must be a licensed ham, either Advanced or Extra class (were the rules changed recently to allow Generals to administer codeless tech exams? I seem to recall there was talk of it.) The other is that you yourself must have passed the examinations you wish to administer. I believe this is a reasonable requirement.

> If you have to have taken a test to give give it then MY VE
>should not have been able to give me my tests, since they have never
>been tested on the RF safety stuff that I was being tested.

You seem to be confusing changing sylabii. If the band limits change, does that mean I am no longer authorized to operate within my bands because I haven't passed that examination?

> If the disabled can't give the same tests as the rest, then
>the disabled are not being allowed to be VE's at all. To say that
>they should is just more bigotry.

I have no problems with disabled people being VEs. I do not think, though, they anyone should administer a test element they themselves have not passed. This includes both disabled and non-disabled people.

> the FCC and being involved in regulatory matters) they become somehow
> "suspect" ???

Anytime *ANY* organization purports to represent the views of its membership, the process by which membership views are expressed through the official outlets of the club are subject to scrutiny. The ARRL is "pro code", because the membership via surveys have expressed that view. If I'm not happy with that I can run for office and attempt to change it. No-Credibility International is "no code", because in order to "join" you have to agree with their "No Prisoners, No Compromise" position on their web page. But, if I wanted to change that, ooops, can't do that -- no elections, just a bunch of appointed-for-life dictators.

Of course, I understand why you don't particularly like this line of questioning, you naturally think you are superior to everyone else, and you've already said numerous times on this very newsgroup that hams are just morons (I assume you also mean the majority of No-Credibility International's members, except those that fit within your personal definition of a Professional RF Engineers' Radio Service), so *naturally*, since they are a bunch of morons, how *could* they know any better than you?

This certainly explains why No-Credibility International doesn't have elections or any other form of votes on policy positions. Oh, sure, you "listen to the membership" - uh-huh. And what happens when the membership says X and you do Y? What are their choices?

Oh, and Carl, you never answered my questions:

1) Did the membership of No-Credibility International elect you to your Board seat, and

2) What are the procedures for electing new officers should the membership be dissatisfied with the current officers?

>> The ARRL makes a big show of "rallying the troops to defend 440" then
>> flames NCI (through you and Jon, of course)

Ooops, looks like we're back to that old "Jon/Ed are really speaking officially for the ARRL" bullshit again.

Hey Bill? Bill?

> I'm REALLY fed up with your two-faced, hypocritical, pompous BS.

You must have a difficult time shaving in the morning, then.

I didn't know they had computers in Arkansas. Must be pretty tight living in
them there trailers.

Also ham radio is not dead. There is more to life than sitting in front of a
monitor and pressing keys. Get involved in other aspects of life and enjoy.

Congratulations, Mr Fisher. I have been a SWL since 1964. I used to have a ham ticket (a
"W3" call) but let it lapse in the 70's due to travel. I must say thatyour observations are
100% on target. All one has to do is tune across partsof the 75 meter SSB band and you
will hear behavior by individuals who I wouldbe hard pressed to call adults. This band
from 3.800 to 4.000 Mc is repletewithfoul language, threats, music playing and general
childish behavior. I thinkthatif the FCC took away a ham band or two a message may be
sent, although on today's ham radio bands you will need the equal of a 2 by 4 crashed
acrossthe foreheads of some of the jackasses I hear on HF radio. Nothing but high class
CB by a horde of rednecks.P.F. - Va

Ray,

Do what I did -- put Nickel Metal Hydride cells into your AA pack. I don't know what RS charges for an additional AA pack, but it can't be a whole lot without the batteries...

In the manner of the Burt.....

Dear Burt,

Eventually I hope you will consider checking yourself into a program
which offers the help you need to move your life forward. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you are under care.

Please don't listen to those who talk as if they know you and your family
personally,
as I'm sure none of the things they say about your past is true. You,
with the proper guidance and care, can forgo your preceived necessity
to utter vile and demeaning things toward others.

Hopefully you will take this is the spirit in which it is written and
close this dark chapter of your life and brighten your own and your
loved ones lives as you move to the future.

Wishing you the best.

I had a reaction much like Louis Sica. At first it was cute, but then when you got to the real stuff (e.g. a 4 year old servicing a 1000W amplifier - I say that instead of 1KW to make it "look bigger" <g>). It's great that they are getting into ham radio, but if I were the parents (I'm 15 right now, 16 in August), I would have them wait until they were about 8 or 9 before they could actually mess with electricity. I'm certain they don't know much about how exactly electricity works and being very careful with it. Just don't let them (or anyone for that matter) touch electrical circuits with two hands! That would be a mess, to say the least.

Anyway, I wish them luck, but I also wish them to be careful.

(BTW: My call sign comes this weekend!)

Hey, Scott.

Very well put (I can hear my mouse operating at ~147MHz - a very exciting listen...). I am the opposite however. I am getting sick of computers! I would like to get a new hobby besides programming. I've done too much of it.

Off the topic a bit, I should have a quote in my signature read, "Receivers transmit". It's true, though; just rather oxy-moronic and silly.

Decent radios. I have a 202 and a 404 myself, with an HTX-212 in the car (predecessor to the 242). Those HT's may be clumsey to use and short on memories, but they're built like tanks.

>On my HTX-202 the ni-cad pack doesn't have much life in it (Bought

>Ray Miller N2NJK

Those NiCd packs that come with the 202 and 404 use a cluster of 6 AA NiCd cells soldered together. Radio Shack sells AA NiCd cells that have the solder tabs on them. They're yellow and are called Replace-A-Cells. You can use these to replace any or all bad cells with these. When I got my 404, the NiCd pack was bad. When Radio Shack replaced it they neglected to take the bad pack, so I'm going to try and fix it soon.

HI HI! yep that is something to think about. But... if the parents refuse to let these fine young hams service their legal limit amps, even though properly licensed, I doubt if the FCC will interfere. I wouldn't let any 4 yr old of mine open the cover of anything over QRP level. However, I would certainly be pleased to work him on 14015!

I WOULD like to see exams that the average 4 year old would have a hard time passing, though, at least above the Novice/Tech licenses. Good of you to bring it up.

5074. Where's That RDF Project Article???

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-18 00:00:00 UTC
From: Alan <alan@xmission.com>
Message-ID: <6makgk$k86$1@news.xmission.com>
Source record: 169522

Hi everybody,

I'm looking for sources for a type of radio direction finding system. I think I saw a project or how-to article in QST, 73, or other Ham magazine many years ago. The system supports four antennas and a common ground plane, which are used to simulate a rapidly rotating dipole by means of switching.

Here's the theory: Imagine a dipole array rotating at, say, 500 rpm, so that each antenna is moving towards, then away from, the signal source. Due to Doppler effect, each antenna sees a signal with an added 500 Hz FM component (small amplitude, maybe, but still there). A comparing circuit checks exact array rotational position against the resulting audio generated by the FM receiver, which extracts the 500 Hz information. This circuit drives an indicator which shows the direction the antenna is traveling at the moment the audio sine wave is at its steepest rise, i.e. when it is traveling straight toward the signal source.

This old army (I think) system was superceded by a rapidly switched static array using four antennas. At least one company markets a very high quality system based on this principle. The article I recall included schematics and parts list, and the project built a display with 8 LEDs in a circle as the direction indicator. It was a simple circuit with an audio input from the radio and four RF (antenna) inputs, and one RF output to the antenna jack for the radio or scanner. There was even a good diagram for setting up the four wave antennas on a common ground plane on the roof of a car.

Anyway (sorry to be so long-winded)

I'd love to find a copy of that article, or one like it, because I want to try to built such an RDF! Anyone who knows, remembers, or suspects what a source might be, please let me know via email. Once I know where the article was, I can get to work trying to locate a copy. Thanks for reading such a long post, and thanks for all your help!

-Alan

5075. Need help to get HAM-radio-info-adresses worldwide for newcomers.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <661>
.....
>From the Editor's Desk:

The end of school is upon us, with summertime BBQ's, picnics and walks on the beach. It also brings summertime wildfires, hurricanes, tornados and the occasional 100 - year flood. Be especially vigilant and firesafe the summer season; we have some great tips for you this week from NFPA.

Stay safe, everybody! See you next week... Dave Larton, Editor
.....

>From the mailbag:

From: Robert M. Riechel <Robert_Riechel@BayNetworks.COM>

Suggest you check out this web page for the latest on FCC Docket 98-20 re: GMRS rebuttals almost to close. Adoption would hurt ability of volunteers to support communications in times of disasters etc.

Current Events:

REACT News:

We just got a message from Bill Simpson, saying plans for the 1998 Convention are moving ahead strongly, but that there is still room for more registrations and the hotel still has more rooms available for REACT members. If you have not already sent in your registration forms and monies to the convention, please consider doing that now. This is a very important convention primarily due to all the changes which have occurred in our organization during the past year, and what is planned for reorganization between now and the end of the century. If you want to be an active part of REACT and help in planning for the next century, make your plans now and send in your registrations.

Forms were in the last few REACTer magazines, or are available by contacting the convention committee at

convention98@reactintl.org

or write to

1998 RI Convention
P.O.Box 228
Pewaukee, WI 53072

The convention is being held in Janesville, Wisconsin from Monday, July 20th thru Thursday 23rd, with the banquet being held on Thursday evening and departure for most folks happening on Friday. The Board of Directors will not be arriving until Friday, July 17th and departing on the 24th to save on hotel room expenses. The hosts recommend that you use Chicago's O'Hara Airport for travel if flying, due to the shuttle bus costing only $15 each way to get you to the hotel in Janesville. If you fly into Madison, WI, it is physically closer, but apparently there is no ground transportation available comparable to that out of Chicago. If you advise the convention committee of your arrival plans (Air/Bus/Train, Terminal or Airport Name, Arrival Date & Time, and Flight/Bus/Train number) they will endeavor to have someone from REACT meet you upon arrival to shepherd you thru the baggage and get you heading the right direction of the shuttle bus pickup.

The hotel is the Holiday Inn Express, 608-756-3100 voice, or 608-756-3111 fax. Rates are $65/night for 1-4 persons. Address is 3100 Wellington Place, Janesville, WI 53546

Shawn Howe, chairman for the '98 Webpage Contest, has asked that those first two web site submissions he received, be resubmitted. His hard drive blew up and guess what? Yup, no backup. If you aren't sure if your web site was among the dearly departed registrations, please send your site again to e-mail address "webpage98@reactintl.org" with your team or council name/ charter, contact information including your e-mail, team/council mailing address and of course the name of your webmaster.

We hope to have a new 1998 Convention Info page posted soon, David Moore, Computer Services Chair is presently working on such a page. Apparently the page, previously made available by some folks working with the Wisconsin Council, was removed for reasons not disclosed to the Computer Committee.

And last, but not least, many of you have been chatting via ICQ with Alf Fronefield, LM 508, serving in Bosnia. Alf just informed me that he might be able to arrange military transportation back into the states in time for the convention. He hopes to get all the way to Chicago area via military transport, but may end up on the east coast instead. Travel plans are still up in the air (no pun intended), but Alf hopes he will be able to attend his first RI Convention and walk away with the award for having traveled the furthest distance :). He stated that perhaps Bosnia would qualify as being further away than Hawaii this year. If you haven't communicated with Alf yet, he is on the Internet and ICQ from 12 Noon-Midnight CDT seven days a week. Sleeping in a MASH 4077 style tent, working out of a metal shipping crate office, he has full Internet access thru the Army's network system. Won't modern technologies ever cease to amaze us? Anyway, you can reach him with ICQ for chatting at #12148852 or e-mail at "kc5vcf@hotmail.com" if you are interested in talking with him.

We hope to have e-mail up and running in the RI HQ offices prior to the convention, and we will definitely have e-mail up and running during the convention from the hotel. For now, however, any e-mail addressed to the above address, will be responded to by Lee Besing, Field Director, and not the office. If you have an inquiry about membership or order status, you need to call/fax/mail the office using normal phone or mail. Lee will forward all inquiries to the office, but has to print them out and mail or fax them for you, thus delaying responses.

NASA UNVEILS NEW INTERNET SITE FOR FIRE MONITORING BY SATELLITE

In an effort to provide up-to-date information about current fire situations around the globe to the public and scientific communities, NASA today unveiled a new presence on the World Wide Web that provides an up-to-date synopsis of current information about fires and their effect on global climate change. This web site features revealing animation depicting wildfires across the globe.

The new Web site at URL

http://modarch.gsfc.nasa.gov/fire_atlas/fires.html

provides recent imagery, analysis of data from the early and mid-1990s, and a synthesis of a range of satellite information resources that are currently available about terrestrial fires and future global fire monitoring capabilities. The Web site draws upon satellite resources from several U.S. agencies and international partners and is intended to serve the needs of the scientific community and the general public.

The recent fires in Mexico and Brazil, and last summer's fires in Indonesia, have heightened public awareness of the importance of natural and human-induced wildfire as a contributor both to regional pollution and global change. Nearly 175 million acres of forest and grasslands are burned each year worldwide. Using data from satellite sensors, aircraft, and ground-based initiatives, scientists are working to develop a new global fire-monitoring program that will enable them to better understand the many implications of this growing problem.

Specifically, efforts are underway to quantify the total area of forests and grasslands burned each year and to more accurately estimate the amount of resulting emission products. These newer and better data will facilitate development of more robust computer models that will enhance scientists' abilities to predict how biomass burning will impact climate, the environment and air quality.

Since no single satellite or instrument provides optimal characteristics for fire monitoring, data are currently used from several satellite systems. Each system has different capabilities in terms of spatial resolution, sensitivity/saturation level, spectral frequency, overpass time and repeat frequency.

Among the agencies and programs represented on this web page are:

-- The International Geosphere Biosphere Program using Advanced Very High Resolution Radiometer (AVHRR) data for 1992/3 from international ground stations.

-- The NOAA-National Geophysical Data Center global fire database for 1994/5 using U.S. Air Force Defense Meteorological Satellite Program - Operational Linescan System data.

-- A near real-time multi-source fire monitoring system being developed for the U.S. to support the Interagency Fire Center in Boise, ID.

-- A near real-time multi-source active fire monitoring system currently being developed at NOAA- National Geophysical Data Center in Boulder, CO, for the current burning season as part of its Significant Event Imagery activity.

-- Satellite fire-monitoring systems from Brazil, Russia and Senegal using the countries' own regional AVHRR systems.

-- Regional examples of trace gas and particulate emissions from fires in Brazil, Southern Africa and Alaska provided by various research groups.

-- Field and aircraft measurements of fires and emissions for satellite data validation as well as new sensing systems and algorithms being developed by various research groups.

ICQ#413404
PACKET-WB6NYC@KE6WVQ
.....

This week's EMCOMM Bulletin:

EMC136 Words, Words, Words!! 3/4 For release 6/15/98

(Topic continues:)
Why do we sometimes feel so angry when we hear or read words with which we violently disagree? Is it because deep down in our psyche we feel somehow threatened because somehow what we read or heard "violates" a concept embodied in our belief structure? Maybe even without our realizing it?

If so, then what can we do about it? That depends on each of us and how willing we are to work with the situation. It's your, and my, choice for each of us. We can choose to ignore it, to observe and learn, and to improve; or any combination.

What does all this have to do with emergency communications? Hopefully, it helps us realize the impact of the words that we use and how we may _not_ really communicate ideas and concepts, let alone facts. Or, conversely, that we may NOT have really understood what the other person said or did, even though we think so.

In some instances when we orally convey a message - especially during stress and emergencies - we are far less assured of its

reception and retention than if it is in written form. That has
been proven often: "Put it in writing if it's important" is the
motto of many a business and government.

However, what about E-mail? It is pretty hard to interact
effectively since both tone and sight (body language) are missing
and we have lost ALL of the clues from those sources.

With E-mail we have to be careful. Because it is digitally
"written" we tend to think it will be as well grasped as a
written (i.e., printed on paper) version. Truth, though, is that
an E-mail message is not always as effective as a printed
message.

E-mail is superb for quick comments, short messages and reports
and quick summaries. When it comes to longer messages, more than
one computer screen, the result can be devastatingly different
depending on the nature of the message and the persons involved.

Some people - on receiving an E-mail message with three items of
content - can only respond to one of them; and the only way
to work around that is to send them three separate E-mail. It
is as if their mind can assimilate only one topic at a time.
Of course, the same thing applies to articles in print, but less
so. At least in print, it's possible to use visual images or
"attractors" (drop caps, underline, etc) to capture attention
or to get a response on each item in the paper presentation.

Why does a long E-mail NOT equate the impact of the same
message in print? Perhaps it is because it avoids:
a. time to analyze and reflect on the _entire printout_
b. less assumptions
c. incomplete and partial responses
d. visual interrelationships of the content, because
scrolling back and forth to see different paragraphs, and
what they contain and how they relate, can be frustrating
and inexact, thereby leading to errors in understanding.

Continues next week.

My eyes are all tearing up. Poor David (KC1ZQ). Well if the truth be known
I didnt complain to IBM. Marty Chittum did. Ive got a copy of it, would you
like to see it? As for David, Polly and most of the Stumpers. They are just
a bunch of troublemaking fools. Oh but you heard it on the radio, so it must
be true...what a fool you are.

5084. Re: Questions On Ham Radio Use

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-18 00:00:00 UTC
From: "Frank J. Krizan" <krizfj@aud.alcatel.com>
Message-ID: <35891170.378A2F1F@aud.alcatel.com>
Source record: 169532

Hi Ray,

You're right, there are a lot of variables to consider when asking 'How far away can I be to hit a repeater?' My experience in the Dallas/Ft. Worth area is on 2 meters, the range is typically 15 miles (as low as 5 and as high as 25) for 5 watts and a rubber duck antenna. On 70cm, the range is typically 20 miles (as low as 5 and as high as 30) for 5 watts and a rubber duck antenna.

Setting up an outdoor antenna (or in the attic) will extend your range.

Your best bet -- get on the air and try it. The ARRL Repeater Directory is a helpful tool. Your local Ham club may have a list of repeaters in your area. Remember that many repeaters have PL (Private Line) tone input requirements (CTCSS). You'll have to set the tone on your radio in order to access these repeaters. For newcomers, this condition can be very confusing -- "I can hear the repeater; but, I can't 'hit' it: What's the problem?" In many cases, it the PL tone.

Good luck and 73,

5085. HTX-202 Battery (Ni-Cad) Rebuild. Can It Be Done?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-18 00:00:00 UTC
From: radioman@localnet.com
Message-ID: <6mb4uk$513$1@news6.ispnews.com>
Source record: 169533

Can the Nicads in the pack be replaced with any of the ones they have
in the catalog under cordless phones? I would think that an individual
could save about half the cost of a new pak.
Any thoughts appreciated.

Try finding an older PRO-51 from Radio Shack from BEFORE August of 1997. You can pick one up for less than $100. It has an interesting way of doing the mod - you don't even have to open the case to do the modification. Just a few keystrokes.

I had the same reaction when I saw the picture. First was "awwww.... how cute" then I sort of made a confused face and scratched my head and started to wonder...

Anyone remember about 15-20 years back when a BIG deal was made when a FIVE year old got their NOVICE ticket?. I forget the name, I forget the call, but I know it was a semi-major-ham-radio event. Now it's a LOT more of a typical occurance. Maybe too typical. Makes you wonder about the exams.. makes you wonder about the testing process...

Cordless phone batteries rarely are more than 3-6 volts (usually 3.6v),
which isn't enough. You might get barely a watt out of that, and it wouldn't
last long.

In other words, probably not. Unless you could find a 7.2 volt NiCd that can
be connected properly inside the pack. Yes, the NiCd pack that RS sells is
way too much, I agree.

Let me know how it works out.

5092. Telecommunications and computers - similar but different

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-18 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6mb820$lj9$1@w3eax.umd.edu>
Source record: 169540

It has sort of finally happened - the computer geek with only a slight interest in ham radio has largely moved out of ham radio, and into the "immediate depreciation" world of computers.

It's been said the radio is not cutting edge. The next time you use a wireless modem, remember that statement. The next time you use a cell phone, remember that. Note how small the cell phone is; the computer inside the cell phone is small, as is the RF power module, biasing circuits, receiver chain, and all that other stuff.

Radio - signal strength, amplifiers, mixers, diodes, FETs, antennas

Computers are completely different. They are both necessary and interrelated, but the technologies are vastly differing.

Both can be cutting edge. Ham radio is most peoples' only exposure to what goes on inside the devices that make our world so convenient.

In excellent condition with full 800 mhz coverage. There are no scratches on it, or anything wrong with the scanner. Have two many scanners, and some have to go in order to raise money for new laptop. I actually have two of these and may sell both at same price. Quick sale for $225 firm + shipping.

Bearcat 2500xlt - 400 channels w/auto store...,full 800 mhz coverage, in original box with battery pack, manual, charger and accessories. Mint condition- $275 or best offer.

Bearcat 2500xlt - Covers up to 1300 mhz as the one above, but its a newer version which icannot be modified for full 800. It comes with the battery pack, charger, and manual (if I can fin it). Mint condition - $150 firm.

Yaesu FRG-9600 - Full coverage from 60-905 mhz. It also has built-in sleep and on-off timers. This radio can be controlled by PC. I never bought the cables or software. Mint and complete, with original accessories, unused mobile bracket, ac adapter, manual, packaging/box. It also has the optional video adapter installed. - $450

Please do not respond unless you are prepared to send a money order in advance. Do not waste my time and yours by saying the "money is in the mail," as one potential buyer did, and changed his mind..

Source record: 169544

I recently purchased a used FT-8500 that was suppose to have the progaming software and cable with it... When I received the packaged radio the Software was in the package, however, the programing cable was missing... I would like to construct a cable. Does anyone have the pin numbers for the serial plug going to the mini din plug for this progaming cable?

Thanks for any info provided.

The treatment Mr Lavigna received was inexcusable. If the original post is a true account of what happened, W4SS made a deliberate effort to discredit and demoralize W3UH because he did not believe W3UH should be a VE. I also do not believe W3UH should be accredited to give any exam nvolving the 13 or 20 WPM exam. However W4SS should have taken his beef to the ARRL VEC, not taken it out on W3UH personally. W3UH's VE credentials should have been taken at face value. The only alternative should have been to simply not allow W3UH to participate. That W4SS did not pursue this course of action seems to indicate that he was unsure of his ground and had doubts that the ARRL VEC , HIS VEC, would agree with him. He acted shamefully toward W3UH, demanding a higher level of competence, experience, and responsibility that is expected from a non-disabled VE with experience. Sink or Swim as a VE? sure, but don't give the guy a ball and chain before tossing him in the water. This was cruel and men-spirited.

My rather harsh opinion of W4SS's actions and attitude are, of course, contingent on the original post being a true account of what took place at the VE session. We have not yet heard from W4SS, W3IUD, or anyone else present at the session.

I did not mean only contesting, Masa. I meant IN SPITE of the contesting. I am not interested in contesting, QSLs, awards, etc. I just like to communicate, and CW is my favorite method of doing so. There is a lot of ragchewing activity on the HF CW bands. More and more hams are using computer or CW keyboard to send code, and more hams with keyers are learning to use them properly. You can get involved, or at least listen, and hear for yourself, with your computer, a HF receiver, and a simple interface you can build yourself, or a sound card or an old fashioned TNC like the PK-232. You might enjoy CW if you could copy it. You STILL can enjoy it with your computer. over half the CW I hear could be copied fairly well with a computer.

It depends on terrain. With a mountain top repeater and a clear line of sight, 60 to 100 miles should be easily possible. (You can work MIR with a HT, and they're further away than that.) But if you are in urban clutter, or in rolling terrain, you might not be able to hit a repeater that's 5 miles away. That's because your signal would be blocked by the terrain. But you could top the next hill and be solid into a machine 20 miles or more away.

Not all VHF/UHF propagation is limited to line of sight. Often you can make use of multipath reflections to get around obstacles. This works better on 70cm than on 2m, but it does work on both bands. More power is helpful when you have to depend on multipath scattering. So usually you can work further using a higher power radio. But even a HT can often make use of this method to hit a repeater that's not in direct line of sight.

Without exhaustive path analysis using a topographic map, the best way to find out what you can hit from a given location is to *try it*.

>On my HTX-202 the ni-cad pack doesn't have much life in it (Bought
>used) Has anyone ever rebuilt one of these? It would seem that it
>should be able to be done if one knew which batteries to use. (I
>recall on a scanner NG a fellow toldof how to do this for the BC-200
>and he saved a considerable amount of money.

Yes, you can rebuild these packs. The easiest way is to get a rebuild kit from one of the battery companies. This is a complete set of cells already welded together in the right configuration to fit in your pack. All you have to do is put them in and solder two wires to the terminals in the case. You *can* rebuild using individual cells, but you need a spot welder to do it right. (You don't want to solder directly to a Nicad cell, that could cause an explosion or cause the cell to fail, connections should be spot welded.)

Rebuild kits usually run about half the cost of a new pack, so they are definitely the way to go. The HTX202 uses the same packs as the old

IC2AT, 4AT, 32AT, etc Icom radios. They are the most common packs
in amateur radio, so rebuild kits are easily available.

The three largest amateur radio makers in Japan have been fined 1.64 yen by the traditionally worthless UN World Court for their role in global warming.

NASA studies of shrinking polar ice caps and a rise in the sea level worldwide made the case a solid one. Said Takajiwagifujishohomuigi Ido of Yerscrewed Muchrepairs Ltd., "we admit now to know for the many years the ham the radio make the hot air problems". Donglongkingkongwrongwong Ito of Bendwood USA said "yes, yes it the real thing, we know the Nixon years and our rigs make the hot air possible". No appeals are expected.

Antique Radio Relay League's new dictator for life, Dave "I spend summer in the cellar sending CQ" Sumter stated that "I QSL your story and this is not fine business. I think ruling amounts to plain old QRM. QRX have a landline. OK had phone call from XYL, Hi Hi, so back to you ? break".

When Karl Svenson, Chancellor of No Cooperation Intended, was asked for his opinion, he said "Begin PGP Signed Message. Those pinkos in the ARRL are to blame. They have the FCC in their hand. The FCC is part of the government and the government is out to get us. Am I being recorded ? You could be one of them. I have nothing else to say. End PGP Signed Message AMiJUstTooCRAZEDtoSEeNoBODYISwatChIngME???"

5106. W8MMQ/RSCM NEWSWIRE-6/18/98

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-18 00:00:00 UTC
From: "Daniel Hicks, Jr." <w8mmq@hotmail.com>
Message-ID: <35894ED2.6C4C@hotmail.com>
Source record: 169554

June 18, 1998
Target: rec.radio.amateur.misc

Welcome to The W8MMQ Wire, for Thursday, June 18, 1998. This is a free news service from W8MMQ and the Radio Society of Central Michigan, and is available to all radio amateurs.

For the latest news and information, as it is issued, check out The W8MMQ Wire on the internet at http://w8mmq.ml.org/news.htm. We are in the process of redesigning all of our web sites, and the new sites should be online soon.

In this issue, we will have an update on the LMCC's petition to the FCC; the next WRC is set for 2000; Dayton Hamvention attendance is up; a special notice from the Radio Society of Central Michigan; and much more!

FCC Flooded With Comments on LMCC
==========
The Federal Communications Commission has been flooded with comments regarding the Land Mobile Communication Council's request for the immediate reallocation of 70-cm to Private Mobile Radio Service use. Comments from the general public, as well as organizations and companies dedicated to amateur radio, poured in since the announcement of this Petition last month.

The comment period ended on June 1, while reply comments ended June 15. There was a report that suggested the FCC may extend the comment period, due to the massive amounts of those already responding.

Among those commenting on the Petition were emergency service agencies across the country, such as the Washtenaw County Director of Emergency Management, Marc Breckenridge, who called the 70-cm band a "priceless resource." Amateur radio also picked up the support of the United States Navy, as reported last week.

If the Commission does decide to extend the comment period, we will report on it immediately, via a special bulletin. We would encourage all amateurs to again spread the word about this situation.

Next WRC Conference Set for 2000
==========
The next World Radio Communications Conference will be held in the year 2000, in Istanbul, Turkey. The Conference is scheduled to be held from May 8 through June 2 of that year. The final agenda for the Conference has yet to be confirmed, however, there are some issues relating to amateur radio that may be brought up.

The communications industry is expected to again pursue the reallocation of 2-meters and 70-cm to Low-Earth-Orbiting satellite use (called the "Little LEOs"). They attempted to bring this up at the last conference, but were bumped from the schedule due to time constraints.

Also of interest to amateurs, although it may not surface until WRC-2002, the Earth Exploration Satellite services are looking to use 430- to 440-MHz for synthetic aperture radars.

As information becomes available, and the final schedule for the Conference is confirmed, we will have more on this story. For now, all amateurs should at least get ready for additional frequency "battles" in the next few years.

Andy Thomas Gives Final Message
==========
As we reported last week, Andy Thomas has left the Mir space station. He was the last scheduled American astronaut to serve aboard the failing station. The following information was taken from the June 15 issue of Space News, prepared by KD2BD.

"The following is the final message issued on 1998-Jun-08 from Andy Thomas before his departure from the Mir space station:

I am leaving Mir today and this will be my last message. Thank you all for your interest in the mission and your messages. Sorry I can not give responses to all of you, but the volume of traffic is too large. It has been wonderful, and I wish you all every success. Good bye and good luck. Andy Thomas."

Preparations are now underway for the International Space Station (ISS), which will carry an amateur radio station. Later this year, shuttle missions will begin carrying supplies into space for the ISS, which is scheduled to be completed in early 2004.

The construction of the station is planned over a 43-flight sequence. For more information on the station, visit http://station.nasa.gov/.

Dayton Hamvention Attendance Up This Year
==========
Dayton Hamvention officials are reporting that this year's attendance was up from last year. There were 28,120 people attending this year's event, just up from last year. There had been a trend of declining attendance over the last few years.

Officials are now preparing for Hamvention 99, which they hope is bigger and better! To review over all of the information for the next event, such as available hotels, maps, vendors, etc., visit http://www.hamvention.org/.

Special Notice from RSCM
==========
The Radio Society of Central Michigan is looking for a good, used 440- or 2-meter repeater to be donated. If you, or anyone you know, has a

repeater that they would like to donate, or simply parts for a repeater, we would greatly appreciate it.

At this time, the Society cannot purchase a new piece of equipment, therefore we are calling upon those who read our newsletter to assist us. If you would like to help, please contact us at rscm@hotmail.com, or call 517/694-8742. Thank you!

This Weekend in Contesting
==========
For complete contesting information, visit the ARRL Contest Calendar, at their web site at http://www.arrl.org/contests/. Contests are listed through the end of this year, and into the next.

The All-Asian DX Contest, sponsored by the Japan Amateur Radio League, runs from 0000-Z June 20 until 2400-Z June 21. Operate CW only.

The SMIRK QSO Party, sponsored by the Six Meter International Radio Klub, will run from 0000-Z June 20 until 2400-Z June 21. Operate 6 meters only. For complete information on the contest, visit http://www.cswnet.com/~ka0nno/.

Amateur Radio Resource Site of the Week
==========
Each week, we feature a web site devoted to providing amateur radio operators with information that can help them in the hobby, whether it be simple questions and answers, or technical research and development.

This week, we feature the Tech Bench Elmers Amateur Radio Society, which is a group dedicated to the promotion of amateur radio via technical means. The group has no formal membership, and there are no dues necessary to participate.

The group experiments with building amateur equipment, and is currently working on a mircowave project for 10-GHz.

To learn more, visit http://www.geocities.com/SiliconValley/2775/, and take the time to browse through their many pages. You will find it very interesting and quite informative.

And In Closing
==========
Finally, we would like to mention that the Radio Shack DX-394 base shortwave receiver is now on closeout for $180.00! If you have a chance to pick one of these up, you will not regret it.

I purchased one last week and am thoroughly pleased with its performance. The rig covers 100-kHz through 30-MHz, continously, in SSB, CW, and AM modes. It also features 160 memory channels, a built-in clock and alarm, dual antenna jacks (Hi-Z and Lo-Z), a built-in attenuator, and much more! It makes a great addition to any ham shack.

Thank you for reading this edition of The W8MMQ Wire. We hope that you have enjoyed it, and please feel free to pass it along to others. All

information is free for you to use, so long as you give credit to W8MMQ or the Radio Society of Central Michigan in some way. Thanks!

For more information on the Society, visit http://w8mmq.ml.org/rscm/. You will find current newsletters, information on joining the Society, and more.

CONGRATULATIONS!

Make sure your Examiner gets your results off in the mail (or if electronic, sent in) in a timely manner.

In about ten days, call 1-888-CALL-FCC. NOT on Monday or Friday. Call early in the morning in mid-week. Be kind to the operator:

"I know my Amateur Radio license is being processed, but i really am anxious. Could you please tell me if my callsign has been assigned to me yet?"

As soon as you find out what it is, you may legally use your HT.

Let us know!

- Clint Bradford

We have a chain of stores on the east coast called Batteries Plus. They have rebuilt packs for a number of Amateurs. Check around.

Did bellsouth finally do away with covert62@bellsouth.net?? Where's pig vomit? Do you mean that just maybe we her in this wonderful are going to be able to discuss things of merit now the the world class brain fart is gone! I can only say "Please tell me its true." I have heard though the grapevine that some of the callsigns that where stolen by this suspect are back in at juno. This may be a fine day for this newsgroup to throw a party! No pig vomit!

Well who is to know if you heard his call or not......the FCC doesn't care
about it....if they did
then they would do something about the LICENSED amateurs on 3910 and 3950
that use four letter words to make up
the bulk of the QSO....K2IJY....

Charles Davis wrote in article

Alan, try the website: http://members.aol.com/homingin

You should find lots to look at there, as well as probably the article you
are looking for. You might also want to consider some of the kits available.
Look through this website, and mabe try a search on the web for your subject
too.

Boy, is THIS ever the pot caling the kettle black! You sit on here all day and then complain about me posting a "LOT MORE" than most. Unlike yourself, I do have a job. That's why you don't see me posting to USENET during the workday.

Get a job, Dan. Have some pride in yourself instead of living off the government of the country you so proudly claim to "have fought for." Frankly, human leeches such as yourself make me sick.

Oh, now it's "Drew or whoever you are?" Gee, what happened here? Are we all-of-a-sudden not so sure of ourself, as we were before?

Yes, I have a job. No, I'm not foolish enough to disclose my place of employment on a public newsgroup.

BTW, since you have once again butted in and taken Deadbeat Dan's side in this argument, I can only assume you agree with his behavior of living off of government benefits when he could easilly hold a job and become a productive member of American society instead.

Sorry old boy, but the VA stopped paying disability to drunks and drug users
some time ago. And I was not rejected by the Army or whatever. I have 12
years service. I first went in the AF in 64, got out in 68. Went to the Army
from 71 to 79. When I got out I applied to the VA and got rated at 40%. I am
now rated at 100% due to deteriation of my condition. According to several VA
doctors I am unable to work. And Im sorry to say that is the case.
How about instead of speculating you ask me next time ok?

First, may I see your medical credentials for such a diagnosis, good doctor
?

Second, I referred to the isolationistism withn their own country. The CSA
sought the aid of the UK in the period 1861-65. Thus, NCI may seek the aid
of foreigners while not supporting the domestick status quo.

I am sir, your gentle anatagonist,

Raul Bloodworth, esq.

Hi,
I got my tech license a few years back and due to several factors never really got going in the hobby after the initial excitement of getting the license. Anyhow, Illness forcedme to retire a couple years back so I have more time nowand have started getting back into it.

The questions I pose here will sound dumb, but I think there are lots of guys here who could makemy jump back into the hobby a bit easier.

I have the following radios: HTX-242 mobile; HTX-404 UHF; & HTX-202 HT I know there are lots of variables but in general how far from a repeater should I be able to be with the 202 and the 404? I ask because I want to have a basic idea of what ones in my area I can hit and which I won't be able to.

On my HTX-202 the ni-cad pack doesn't have much life in it (Bought used) Has anyone ever rebuilt one of these? It would seem that it should be able to be done if one knew which batteries to use. (I recall on a scanner NG a fellow toldof how to do this for the BC-200 and he saved a considerable amount of money.

I appreciate any and all help here and thanks
Ray Miller N2NJK

"At that time" is most correct. Nowadays, the computer geek is the revered and respected one in the neighborhood. And this is as it should be. Ham radio is hardly "high tech" in today's world.

Get a job, Dan. If you're able to spend hours a day on the Internet, you're certainly able to work for a living. I'm sick of having my earnings confiscated in order to pay for people like you who choose to sit home and collect a handout from the government.

>unlicensed people giving ham licensing exams, couldn't we? Since we

Why not indeed? What is wrong with that.

Indeed why would all three VE's need to be able to recieve
code to check it. At most I can see some reason for requiring a VE
team to have at least one mmeber able to read the code tape himself,
but if it is good code, then even without we cold feed the tape to a
machine and see if the trabslation of the machine differed from the
one the VE's intended?

>don't do that, we have established a series of qualifications for
>VEs. One is that you must be a licensed ham, either Advanced or Extra

>administer. I believe this is a reasonable requirement.

Again opinion as sole reason. Or alowing linced Techs to give
under some condiction the same tests as they themselves take. At the
risk of spreading the Morse flame war back here. What does passing a
13wpm morse have to do with being able to fairly and reasonably give a
written test or grade a code the results of a code test
>

>Hmmm.
>
>

Just keep "Hmmmmming" Gary. If you are trying to say what it looks like you are trying to say, let me make myself perfectly clear. I am NOT Drew, I am NOT TheLibNet, nor MNMANIAC, nor TheHamGuy, nor anybody else. I am allowed five screen names on my AOL account, and I can account for all five of them. I use all five so I can have a 2 Mb directory for each one to use for my website. My screen names are:

RCrusoe
AB5VH
AB5VH/MM
AB5VH/QRP
Such A Dog.

Sorry... I won't give out any passwords. Yeh I know the last one kinda stands out from the rest... I used to do a little IRC and that was the name I used for chatrooms. Never got around to deleting it.

"The person using the screen name RCrusoe" can be reached by snail mailing me at the address in the callbook. Callsign in the sig. Or when I am offline you can telephone me at (956) 399-4653. Announce yourself to the machine cause I usually don't pick up until I hear who it is. You might even hear me around 10115, 14015, 18080, CW, or 14080 RTTY on occasion.

It should be obvious from the content of my posts that I am not Drew. Also, it is easy enough to determine when both of us are online... I am sure we are often online at the same time.

My posting software is the stupid newsreader integrated into the AOL software. You gotta use their software when you use their service, except that there are ways to use the straight MSIE for web-crawling. Yeah, yeah, I know... AOL leaves something to be desired for an ISP, but they are about the only game in town here. They have a local number.

I used to give you credit for being a fairly intellligent guy, Gary, even if a tad over-argumentative. Perhaps I was mistaken.

I'm not a Ham operator, though I know it's gotta be the greatest way to communicate, next to the Net. I think it would be really neat to set up a webpage filled with stories about adventures and, mostly, good times had while on the radio. Since I'm not a Ham broadcaster, I don't have any myself, but if anyone'll send their stories to me I'll put them up on an up coming webpage. Thanks.

For all the contesting, Pile-ups, and QSL chasing on 20, 14000 to 14060 is still a very polite and civil place, and it still isn't too bad as far up as 14100. I have never heard an obscenity sent via CW, nor even an insult. Even arguments are pretty scarce. RTTY still pretty peaceful too.

5149. FS: 12 Volt Gel Cell Batteries

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-19 00:00:00 UTC
From: tje@usol.com
Message-ID: <3595ab6b.7420018@news.usol.com>
Source record: 169392
Cross-posted to: rec.radio.amateur,rec.radio.amateur.boatanchors,rec.radio.amateur.digital,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.cb,rec.radio.swap

Have about 40 used 6 and 7AH 12 VDC gel cells for sale. Also have about 10 4AH 12 VDC cells. All load tested good. PERFECT for QRP rigs and portable operation. I have sold hundreds of these to the QRP boy's on the QRP mailing list and all have been very satisfied. Had a few damaged in shipping and one came back DOA which I replaced for the fellow free of charge but that's it. I am the service manager for an alarm company and we change our customers batteries every 3 years as preventive maintenance. These used cells should provide another 2 to 3 and probably longer service if used and recharged properly. Cells come fully charged and are ready to go. They can be recharged with a simple wall wart charger available at Radio Shack or a 1 amp automotive charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

If you buy 2 of the same I will knock $3.00 off the total price.
Images of the cells can be seen at:

http://www.usol.com/~tje/yuasa6.jpg Yuasa 6ah
http://www.usol.com/~tje/yuasa7.jpg Yuasa 7ah
http://www.usol.com/~tje/rad6.jpg Radionics 6ah

I use a pair of cordless phone batteries wired in series to get 7.2v.
The resulting pack only has a 260mA/hr capacity, but that's enough for
an entire day of monitoring for me with some ocassional transmissions.

All Electronics Corp. in L.A. sells cordless batteries for a couple
bucks each. I think their address is allcorp@allcorp.com; ask for their
catalog - lots of surplus goodies.

I use a pair of cordless phone batteries wired in series to get 7.2v.
The resulting pack only has a 260mA/hr capacity, but that's enough for
an entire day of monitoring for me with some occasional transmissions.

All Electronics Corp. in L.A. sells cordless batteries for a couple
bucks each. I think their address is allcorp@allcorp.com; ask for their
catalog - lots of surplus goodies.

5157. IC740 u/d mic connex?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-19 00:00:00 UTC
From: morrista@oz.fd1.uc.edu
Message-ID: <6mccdnpth1@news.ececs.uc.edu>
Source record: 169400

I have an IC-740 with a hand mic and a new SM-6 desk mic (NOS @ Dayton).
In digging through the manual, I've noticed that Icom once sold a hand
mic with up/down buttons, and lo and behold, the circuit diagram shows
pin 3 of the mic connector as "u/d." According to the manual, when the
u/d line is at 13.8V potential, nothing happens; when it goes to ground
potential, the rig tunes one way, and when it goes to 1/2 supply
potential, it goes the other. My question is, what kind of simple
circuit/component lashup would let me access this outboard. I have in
mind a DT momomentary toggle switch that I could mount on/next to the
desk mic. What I don't know is what kind of current limiting to put on
the circuit, or else I could calculate a dropping resistor myself :-)...

Any suggestions would be greatly appreciated!

I've noticed WWVH into the midwest just about every night, covering WWV on 10 and 15 MHz. WWV has been booming in on 20 MHz just before midnight, but not during the day, which is way counterintuitive to what I was taught about HF propagation!

Dan,

I am a ham operator and Civil Air Patrol member, so I pay some attention
to the ham radio and CAP frequencies issue and "type acceptance".

What you are proposing to do is illegal. First of all you cannot transmit
on marine band with anything by a "type accepted" marine radio. Secondly,
this is independent of your being a ham or not, and having or not having a
marine radio operators license. It is the a whole different class of laws
having to do with using radios that are modified to transmit out-of-band.
The same set of laws would apply to someone who used a ham radio for the
business radio service, or turned a ham radion into a 1500 watt CB. Thirdly,
the Civil Air Patrol and MARS organizations have a special dispensation under
the law to use transmitters that are not "type accepted". In other words
they CAN convert a ham radio (or a commercial radio, etc.) to function in
the CAP frequencies. Nobody else (individuals or organizations) can legally
do this as private citizens. MARS and CAP operate on government frequencies
that are not even administered by the FCC, instead they are administered
by the National Telecommunications and Information Agency. The NTIA deals
with goverment frequencies and the FCC deals with public frequencies. I am
attaching portions of the FCC regulations for marine band and the aviation
radio part that mentions the FCC. These are from Chapter 47 of the Code
of Federal Regulations.

MARINE RADIO REGULATIONS

&#65533; 80.203 Authorization of transmitters
for licensing.
(a) Each transmitter authorized in a
station in the maritime services after
September 30, 1986, except as indicated

in paragraphs (g), (h) and (i) of this section, must be type accepted by the Commission for part 80 operations. The procedures for type acceptance are contained in part 2 of this chapter. Transmitters of a model type accepted or type approved before October 1, 1986 will be considered type accepted for use in ship or coast stations as appropriate.
(b) The external controls, of maritime station transmitters capable of operation in the 156-162 MHz band and manufactured in or imported into the United States after August 1, 1990, or sold or installed after August 1, 1991, must provide for selection of only maritime channels for which the maritime station is authorized. Such transmitters must not be capable of being programmed by station operators using external controls to transmit on channels other than those programmed by the manufacturer, service or maintenance personnel.

AVATION RADIO REGULATIONS
(d) The equipment listed below is ex-empted from type acceptance. The op-eration of transmitters which have not been type accepted must not result in harmful interference due to the failure of those transmitters to comply with technical standards of this subpart.
(1) Development or Civil Air Patrol transmitters.

(a) Civil Air Patrol land and mobile stations may communicate with other land and, mobile stations of the Civil Air Patrol. A Civil Air Patrol land station may be moved from its authorized location for temporary operation in the same general area for short periods of time not to exceed 72 hours.
(b) When engaged in training or on actual missions in support of the U.S. Air Force, Civil Air Patrol stations may communicate with U.S. Air Force stations on the frequencies specified in subpart E.
• 87.503 Supplemental eligibility.

Licenses for Civil Air Patrol land and mobile stations will be issued only to Wings or the Headquarters of the Civil Air Patrol. All applications must be submitted to the Commission via Civil Air Patrol Headquarters, Maxwell Air Force Base, AL 36112. A single fleet license will be issued to Civil Air Patrol Headquarters and to each Civil Air Patrol Wing to authorize all Civil Air Pa-trol Station transmitters operated by the Wing or Headquarters.
[54 FR 11721, Mar. 22, 1989]
 87.505 Frequencies.
The assigned frequencies available for assignment to Civil Air Patrol land and mobile stations are contained in the frequency table in subpart E. The frequency, emission, and maximum power will be determined by Headquarters Civil Air Patrol in accordance with the Civil Air Patrol Communications Plan.

For your purpose you really need to buy a separate marine band radio to stay within the law. You could actually risk having both your ham ticket and the marine band permit yanked by the FCC, I believe.

Bill Norcott

Please listen to me Patty- you are a troll. Go scamper under
your bridge and wait for the next wagon of fair damsels.
I'm sure the things they say about you is true. You are short
and green, and wear suspenders and socks with candy cane stripes
on them. You, with the proper guidance and care, can forgo your
preceived necessity to utter vile and demeaning things toward
passing noble ladies and join a circus or sideshow. There are
many.

Hopefully you will take this in the spirit in which it is
written and return to the dark forest where you came from as we
move to the future.

Wishing you the best.

Your right the 820 was a fine rig BUT lacks 3 important things... 30,
17 and 12 meters. Had an 830S (gold emblem) and sorry I ever sold it.
It was the best rig I ever owned... well next to a Drake "B" line
anyway.

5175. Ron Paul

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-19 00:00:00 UTC
From: Curtis M LaFon <n5hdq@wf.quik.com>
Message-ID: <358A2F24.5947F7F7@wf.quik.com>
Source record: 169418

--

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I could not think of anything witty to say here.
So I plagiarized Lee Taylor.

If ignorance is bliss,
anti-gunners should be the happiest people in the world.

BRADY LAW is under attack.

Congressman Ron Paul from Texas has introduced
H.R. 2721, a bill that will kill BRADY if passed.

It needs our support. At last
count there are 11 sponsors.

The FBI wants to write their own rules, which
go against the language of BRADY, so that they
can collect a fee (illegal tax ..?) for the
so called instant check. I say so called as
per the FBI it will take at least 3 days to
get the results back.

The FBI also wants to keep the records for
18 months. Brady says that the data will be
purged when the reply is sent. This record
that the FBI wants to keep has your name
and address in it. Why do you think the FBI
needs to keep the record for 18 months, or
better yet, why DO THEY WANT TO ..??

Now get this. The FBI thinks that if you
take a firearm to a Gun Smith or a Pawn
Broker before they can return it to you
the instant check must be performed and
you pay the fee ($30.00) has been mentioned.
If you go to a gun dealer and buy more than
one firearm at the same time the FBI wants
a instant check and fee for each transaction.
The FBI does not want a record of new sales,
they want a record of all firearms.

You may have noticed that I am saying firearm,
not hand gun as we have been used to hearing
when BRADY is mentioned. As of 30 November

this year Brady language drops handgun and
uses firearm.

How do you feel about a law that was ruled,
at least in part, as un-constitutional being
beefed up to suit Clinton and his gun grabbing
Corps..?

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

More info is available at my web site.

http://wf.quik.com/n5hdq

Take the HELP REPEAL BRADY link on the Gun Page.
You will find a link there to see if your Rep.
has signed on and also a copy a link to an easy
way to Email your Rep. with a canned mail urging
him to support HR 2721. This is furnished in a copy
of an Email I received from Gun Owners of America.

If you directly ground Pin 3 the radio scans up in frequency. When
you ground Pin 3 through a 470 Ohm resistor the radio scans down.

The light bar won't provide an ideal groundplane, but it may be good enough for your purposes. The presence of lights, and their wiring, near the antenna will certainly distort the radiation pattern. Without a detailed drawing so the system could be modeled accurately, I'd say you'll just have to try it and see how bad it will be. It is very unlikely to be worse than a rubber ducky inside the cab. :-)

5182. New: Transmitter Museum Page

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-19 00:00:00 UTC
From: Jim Hawkins <jimh@exit109.com>
Message-ID: <358A8678.7DA4EC6@exit109.com>
Source record: 169425

There seems to be plenty of web museums of radio recievers. Therefore,
I have decided to add a page which crossreferences all the transmitters
on my website.

http://www.exit109.com/~jimh/xmtr-museum.shtml

There are now 42 labeled "thumbnails" on the page which you can click on
to enlarge. Each has a link to the page that it is associated with.
Model numbers are included where known. Some are marked "Model?" I
invite anyone who can identify the unknown models to send me e-mail on
it.

With all the photos on this page, I warn that it takes awhile to load.
I timed it at 2.5 minutes at 28.8 under pretty good conditions. So, be
prepared to take a break while the page downloads.

Enjoy,
Jim Hawkins - WA2WHV

5185. New England Hot Air Balloon Launch Tomorrow

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-19 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6me6jknbq1@nnrp1.dejanews.com>
Source record: 169428

Hams will be launching a hot air balloon tomorrow from the National Weather Service. The balloon is not filled with traditional burning gases. Instead, local enhusiast Joe Blow has found that a equivalent amount of lift can be provided by placing the mouth of the balloon on the mouths of hams operating on 2 meters and sometimes HF.

The in flight maintenance of the balloons altitude will be provided by a ham in a basket, along with a 2 meter HT which should be audible over the screams of the human cargo all over New England. Position reports will be given each minute, and will follow this format : "Well, there, Bob, I'm about 22 feet from the stoplight in Milford by McDonalds, and by gosh the light just turned red and now I'm in traffic here waiting at the light. Back to you".

The balloons planned path will be summarized every five minutes in this format : "OK there Bob, well I'm heading out to pick up the XYL at the hospital; she goes in once a week for the dialysis and blood pressure, so I'll be out of the house for an hour."

You are making a medical assumption, Dr. Durigan, that Dan is not disabled. The VA doctors should be informed that their evaluation of Dan's condition was in error because it is counter to your own diagnosis performed via internet. Perhaps if they had examined him via keyboard and monitor instead of the old fashioned method of doing it in person, they would have made a similar determination. When will the VA get with the times and stop the archaic practice of actually examining a patient when an evaluation is needed? Sheeesh! Thank you for showing us the way.

Propagation Forecast Bulletin 25 ARLP025
From Tad Cook, K7VVV
Seattle, WA June 19, 1998
To all radio amateurs

SB PROP ARL ARLP025
ARLP025 Propagation de K7VVV

Solar activity over the past week was about the same or slightly lower than the week previous. Average sunspot numbers were about the same and average solar flux was down about eight points. Geomagnetic activity was stable, except for June 14 when the planetary K index briefly rose to 5. Planetary A index for the day was 15. Average solar flux for the previous ninety days actually went down one point to 109, and solar flux over the past week was below this value on four out of seven days, indicating a flat trend.

Solar flux is predicted to be about 100 over this weekend, Friday through Sunday, and the Planetary A index is forecast to be 12, 15 and 8. Flux values are expected to drop below 100 after June 21, hit a minimum of 90 on June 26 and 27, and rise above 100 again after July 2 peaking around 106 on July 5 and 6. Unsettled geomagnetic conditions may return around July 1 to 4 and July 7.

Overall conditions for the next few weeks are predicted to be flat, with no increase in solar activity. This is based on recurring conditions observed as the sun goes through a 27.5 day rotation. Viewing recent solar images on the worldwide web shows few sunspots, and of the few visible, they seem to be concentrated outside of the central area that would most affect the earth.

Sunspot Numbers for June 11 through June 17 were 95, 122, 148, 104, 79, 71 and 94 with a mean of 101.9. 10.7 cm flux was 112.4, 112.2, 110.5, 101.9, 100.4, 104 and 100.6, with a mean of 106, and estimated planetary A indices were 8, 8, 6, 15, 8, 8, and 5, with a mean of 8.3

Cutie boy,
The young man has a TECH PLUS! He has passed the 5 wpm and is welcome to operate phone on 10 meters. Legally!! What is your problem with those of us who have taken the time to learn the code and operate HF? You have been given a welfare liscense to operate above 50 mhz. So operate.
Are you gay? That name "cutie Boy" is not something a man would tolerate, I don't care one way or the other about your sexuality, it's just that I've seen some of the arguments by the Lambda groups and they are defenseless in what ever cause the "little girlish bitching" types are putting forth. No code was high on their list. They wanted to increase their ranks so they figured that a no code general ticket would do that.

Butch Magee, KF5DE

In general, yes -- but nothing is absolute especially where
ten meters is concerned. Sporadic E in particular commonly
happens after sunset and can be VERY intense then.

Here in Alaska, I use my HTX-202 to transmit to a repeater at ranges of 15-25 miles. That's on high power though. When at the 25 mile limit, it's a bit difficult with the rubber duck antenna so I use my magnetic mount on top of my truck. If you're at home using the radio, you can put up a decent Yagi and should be able to work the repeaters up to 25 miles away. Most of this depends on what's between you and the repeater though... If you have a mountain range or tall buildings, you might not be able to hit it but, here in Fairbanks, it's relatively flat. You can also bounce your signal off mountain ranges and buildings if you need to. I've read several stories of people bouncing 2 meter signals off Mt McKinley to get the signal where they want it to go. The main thing to do is get rid of the rubber duckie antenna and get a good antenna. This will improve your range by a great deal.

Welcome back to the hobby.

Rudi,

Congratulations on getting your Tech Plus license !!!

We are coming out of the low end of the solar cycle, so 10 meters
will be getting better and better. Look for several years of
excitment on 10. Right now 10 will have its "ups" and "downs",
so some days it will be real hot and other days, nothing.

Remember 10 can go from hot to cold in a mater of minutes.
I was talking with a guy across the country, his signal went
from S9 on my meter to S0 in about a minute. Oh well, it
happens. Think of it as part of the fun of 10; you never know
what is going to happen.

You may want to keep working on upgrading. I know that 13 WPM
may seem like a lot, but if you work at it, you can do it.
Once you pass the 13 WPM and General test, you get a slice of
ALL the HF bands. From there, it's just the written test to
reach Advanced. With Advanced you get a bigger slice of HF
AND if you want, a 2n2 callsign.

73,
Bob

5205. AURORA WATCH: Middle Latitude Auroral Activity Watch Issued - 19 June

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-19 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <6mencp$59c2@mars.online.uleth.ca>
Source record: 169448
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.astro.amateur

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH ISSUED: 21:50 UTC, 19 JUNE

/\

ACTIVATION: EFFECTIVE IMMEDIATELY
VALID UNTIL: 19:00 UTC ON 21 JUNE

HIGH RISK PERIOD: 19 - 20 JUNE (UT days)
MODERATE RISK PERIOD: 19 - 21 JUNE

PREDICTED ACTIVITY INDICES: 23, 20, 12, 08 (19 JUNE - 22 JUNE)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: LOW TO MODERATE

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NIL TO LOW

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR TO POOR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN WASHINGTON STATE TO NORTHERN IDAHO TO NORTHERN OR
CENTRAL MONTANA TO NORTH DAKOTA TO NORTHERN MINNESOTA TO NORTHERN
WISCONSIN TO CENTRAL MICHIGAN TO DARK-SKY SITES OF EXTREME NORTHERN
NEW YORK STATE AND POSSIBLY DARK SKY LOCATIONS OF MAINE.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN UNITED KINGDOM TO EXTREME NORTHERN EUROPE INCLUDING
THE NORTHERN HALF OF NORWAY, SWEDEN AND FINLAND, TO NORTHERN
RUSSIA. EXTREME SOUTHERN REGIONS OF NEW ZEALAND MAY ALSO SPOT
PERIODS OF ACTIVITY.

SYNOPSIS...

The arrival of what appears to be a weak coronal mass ejection impacted
the Earth late on 18 June and produced periods of mildly enhanced auroral
activity. At the present time, solar wind conditions are fluctuating quite
widely, suggesting that the Earth has probably missed the core of the
disturbance and is instead riding through the outer flanks of it. Over the
last 6 hours, the potential for observing slightly stronger levels of auroral
activity has been increasing in response to intensifying magnetic fields
within the disturbance. At the present time, the fields have not been

oriented into a favorable direction for producing strong levels of auroral activity. However, the possibility exists for observing periods of sporadically stronger auroral activity sometime over the next 12 to 24 hours. Should stronger activity materialize, observations from dark sky middle latitude sights might be possible. As a result, this watch is being issued to cover the possibility of middle latitude sightings of activity.

This disturbance is expected to subside on 20 June. However, residual activity may continue to produce periods of moderate auroral activity through the early UTC day of 21 June. As a result, this WATCH will remain active until 19:00 UTC on 21 June. It will then be updated or allowed to expire.

PLEASE SUBMIT ANY OBSERVATIONS YOU MAKE OF AURORAL ACTIVITY TO:
http://solar.uleth.ca/solar/www/auroras.html

For realtime information regarding the status of the disturbance, and any other solar flares or terrestrial disturbances, consult:

http://solar.uleth.ca/solar/www/swarm.html

(the only software in the world that can reliably warn of disturbances) and associated auroral activity before they impact the Earth.
On-Sale Only Until 27 June 1998.

** End of Watch **

They certainly TRIED to kill him! Their intent was obvious to anyone who saw the videotape! And yes, they were "arrested", but so what? Nothing ever came of it. Did you hear anything from Janet Reno; anything about "civil rights" or "hate crime" in the Denny case? Of course not. Denny was WHITE and his attackers were BLACK. If this had been reversed, Denny's attempted killers would be sitting on Death Row right now.

The Solar Warning And Realtime Monitor (SWARM) software has been on-sale during the last month at the sale price of $200 USD (33% off the regular price of $300 USD). This sale will end on 27 June 1998.

SWARM is the worlds most advanced real-time space weather early warning system for personal computers. It is used extensively by amateurs and professionals alike. It provides unprecedented real-time information regarding solar activity, solar wind conditions, geomagnetic conditions, near-Earth space environment conditions, and ionospheric conditions. It is ideal for radio communicators, satellite operators, space weather forecasters, scientists, educators, electrical power grid managers, persons reliant upon satellite communications, astronomers, aurora (northern lights, southern lights) enthusiasts, surveyors, navigators (i.e. users of GPS) and many other related fields of interest.

Refer to the web page at: http://solar.uleth.ca/solar/www/swarm.html for complete and detailed information regarding the software.

5217. 6 Meter FM Transverter question

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-19 00:00:00 UTC
From: Michael1998@webtv.net
Message-ID: <6mf43u$1d4$1@newsd-112.bryant.webtv.net>
Source record: 169460

I am thinking about buying the 6 Meter 2-6 transverter that Ten Tec makes and I have some questions for anyone that may have built one of these. First, is the thing worth spending money on, secondly, how hard and what types of material are needed to build the transverter? (i.e. a VOM meter). Also, can you make some decent DX contacts with the thing running only 7 or 8 watts FM into something like a dipole or 5/8 wave whip antenna when 6 Meters open up. Also, what would be a good frequency for me to tune to on my scanner to hear DX contacts on FM whenever the band opens up? Please e-mail if you can answer any of these questions Thanks in advance.

Dean
As awful has it sounds I have to agree with you. Americains are lazy fat and very self centered Look at pig vomit as a example. If this is a example of Amercican fighting man under the volunter milatary, God help us, 14 years suckin' off the U.S.Navy and then tossed for dope pocession. Thats a darn shame. I do belive that every young man should be required to spend at least 2 yrs in the United States milatary. I think that it will help against what I see going on right now. What is going on right now people in America are getting fat and just plain lazy. Look at the no code issue, just for example, people don't want to have to work for anything. Lazy lazy lazy. You know that is why the Romans fell, lazy lazy lazy. Thats just my opinion, Wake up America!

All pieces of equipment grounded using 8-guage stranded wire to an
8-foot grounding rod .
It sounds like a grounding problem to me check these few things out.
Ray Have you got your antennas grounded at the sheild side of the coax
at the antenna? This will also help protect from lightning.
Is your power supply grounded with the same 8 gaug wire? In other words
do you have the case of the power supply grounded to the same 8 gauge
wire.
Is you 8 ft ground rod ground to your electric company ground?
Try these then start looking at the filtering between your
powersupply and your AC line. It sounds like your getting into your AC
then going out to you neighbors AC.
I hope that helps.

Just like this governement so busy worring about the world but not
enough time to take care of its own. All these guys wining about
broadcast stations causing interferance from a Eroupe radio station when
there are so many qrmers here in the states. I'll name one 6/18/1998
KD4CDB came on 3.901 at or around 7 pm est and disrupted all
communications for more than a hour. Here we have a station that has not
reported a change of address with the FCC since his move into Paulding
County a 2 months ago. Those of us that use 3901 can testify to this. So
what is the big deal that the ARRL (witch is going to be the death of
ham radio as we know it anyway) knows how to write a letter, big deal. I
think that it would be a bigger deal if they could take care of its own.

Long-range DF and mobile DF units will be working a malicious interference case in Paulding County, GA today.

Frequency 3901 has been subject to persistent intentional and malicious jamming for the last several weeks from an unidentified station in Paulding County, GA.

Does anyone know the location or identification of this station?

Slow it down to 5 WPM and teach your neighbors Morse Code via blinking lights.
Then they can get in on the fun too.

Seriously, your setup sounds pretty straightforward and clean. Try
experimenting with clamp-on ferrite chokes on a couple of lamps. If you have
any old "Mystery Toroids" laying around, 1" or bigger, try passing as many
windings as will fit through the toroid on the lamp power cord. If you can
correct the worst of them with ferrite chokes, then you got it whipped.

If your output is clean, of course you are not at fault. The fault is with the
lamps. Legally you are in the clear to transmit on any legal frequencies and
any power level. In practice, though, it sure is a lot better to just go ahead
and cure the problem if at all possible. If 20 or 30 bucks worth of ferrite
doodads will solve the problem, I would go for it. The goodwill is worth it.

By the way, the ashole who invented those stupid touch lamps should be
sentenced to live in your attic surrounded by them. Those things are a real
headache.

Dear Burt,
Eventually I hope you will consider checking yourself into a program
which offers the help you need to move your life forward. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you are under care.
Please don't listen to those who talk as if they know you and your family
personally,
as I'm sure none of the things they say about your past is true. You,
with the proper guidance and care, can forgo your preceived necessity
to utter vile and demeaning things toward others.
Hopefully you will take this is the spirit in which it is written and
close this dark chapter of your life and brighten your own and your
loved ones lives as you move to the future.
Wishing you the best.

5229. The ARRL Letter, Vol 17, No 25--Pt 2

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-20 00:00:00 UTC
From: "Lindquist, Rick, N1RL" <elindquist@arrl.org>
Message-ID: <6mha1f$i2b$1@mgate.arrl.org>
Source record: 169330
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

(Resending)

The ARRL Letter
Vol 17, No 25, Part II

TIMEWAVE FILES CHAPTER 11 BANKRUPTCY

Amateur Radio equipement manufacturer Timewave Technology (http://www.timewave.com) of St Paul, Minnesota, has filed for Chapter 11 bankruptcy. Timewave President Randy Gawtry, K0CBH, says Timewave plans to continue normal operations while it prepares to file a reorganization and debt payment plan with the federal bankruptcy court. "The process now is in the early stages," he said. The move comes a little more than a year after Timewave acquired rights to the AEA digital product line after AEA ran into financial trouble. Timewave is best known for its DSP filter accessories, such as the DSP-599zx.

"We're still operating and we're still doing repairs and upgrades for our DSP products," Gawtry said. "Nobody should panic."

Gawtry said the company still expects to have its new DSP-2232zx multimode TNC on the market later this year. But he conceded that under Chapter 11 bankruptcy, "any number of things can happen." The company has 60 days to file its reorganization plan, which must be approved by the court and by the company's creditors.

CHANGES AT CUSHCRAFT

Antenna maker Cushcraft has announced that Ed Hammond, WN1I, will be the company's new Amateur Marketing and Sales Manager. Hammond, who has worked at Cushcraft previously, replaces Amateur Radio Product Manager Art Hambleton, K1ART, who resigned. Cushcraft President Steven Best says Hambleton left Cushcraft "to pursue another career opportunity elsewhere and was not asked to leave the company."

Best said that Hambleton's job had become more sales and customer support-oriented, while Hambleton was more comfortable "in the product development end of the business." Hammond's job, he said, will involve sales and support but not product development.

Earlier this year, Cushcraft hired Adam Alevy, N1FXT, as its engineering vice president. Also now on board are engineering technicians Danny Horvat, T93M, and Pete Jovanovic, T94OF, from Bosnia, and Paul Randazzo, NW1U, as its amateur customer support rep. Amateur and commercial marketing and sales have been combined into a single department, Best said.

Best also took the opportunity to reiterate that Cushcraft does not plan to abandon the amateur market. "We are and will remain fully supportive and committed to the amateur marketplace," Best said, pointing to the company's recent presence at the Dayton Hamvention where Cushcraft introduced its new X7 and X9 beams and the R6000 vertical. The company also has improved the trap design of the R7000 and will debut a new line of HF monobanders.

Best also said Cushcraft will unveil a new Web page within the next few weeks, and that he "definitely" plans to get his ham ticket.

SATELLITE LAUNCH WINDOWS SET

The tentative launch date for the TechSat-1B Amateur Radio satellite has been set for June 23-24. That announcement from Assi Friedman, 4X1KX/KK7KX, of Arizona State University. The Russian Space Agency is providing the ride into space.

TechSat-1B is a digital store-and-forward satellite using 9600-baud frequency-shift keying (FSK), much like UO-22, KO-23 or KO-25. TechSat-1B will feature uplinks on 145 MHz and 1.2 GHz and downlinks in the 70-cm band. Friedman says that a telemetry decoding program for the satellite soon will be available.

Elsewhere, the TMSAT microsatellite is set for a June 23 launch from Russia's Baikonur Cosmodrome in Kazakhstan. It will be placed into a 821-km sun-synchronous orbit. An overview of the TMSAT commissioning plan is available at http://www.ee.surrey.ac.uk/EE/CSER/UOSAT/amateur/tmsat/tmsat_commissioning_plan.html. Further information and updates are to be posted to UO-22. Uplink frequencies will be 145.925 and 145.975 MHz; downlinks will be at 436.925, 436.900, 436.950, and 436.975 MHz.

Meanwhile, word from Alabama is that the SEDSAT-1 Amateur Radio satellite now is scheduled for launch on a Delta II space vehicle sometime in October. The exact launch date has not been confirmed. SEDSAT will fly as a secondary passenger along with the JPL Deep Space One mission.

SEDSAT-1, under construction at the University of Alabama's Huntsville campus under the direction of Dennis Wingo, KD4ETA, now is complete and is in the final stages of testing. It was to have been launched in July, but problems with the primary payload delayed the launch until this fall. SEDSAT-1 will carry a Mode-L digital transponder as well as a Mode A analog transponder.--AMSAT News Service; HaGAL International

SOLAR UPDATE

Solar scribe Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity over the past week was about the same or slightly lower than the week previous. Average sunspot numbers were about the same and average solar flux was down about eight points. Geomagnetic activity was stable, except for June 14 when the planetary K index briefly rose to 5. Planetary A index for the day was 15. Average solar flux for the previous 90 days actually went down one point to 109, and solar flux over the past week was below this value on four out of seven days, indicating a flat trend.

Solar flux is predicted to be about 100 June 19-21, and the Planetary A index is forecast to be 12, 15 and 8. Flux values are expected to drop below 100 after June 21, hit a minimum of 90 on June 26 and 27, and rise above 100 again after July 2 peaking around 106 on July 5 and 6. Unsettled geomagnetic conditions may return around July 1-4 and July 7.

Overall conditions for the next few weeks are predicted to be flat, with no increase in solar activity. This is based on recurring conditions observed as the sun goes through a 27.5 day rotation. Viewing recent solar images on the Web shows few sunspots, and, of the few visible, they seem to be concentrated outside of the central area that would most affect the earth.

Sunspot numbers for June 11 through June 17 were 95, 122, 148, 104, 79, 71, and 94, with a mean of 101.9. The 10.7-cm flux was 112.4, 112.2, 110.5, 101.9, 100.4, 104, and 100.6, with a mean of 106. The estimated planetary A indices were 8, 8, 6, 15, 8, 8, and 5, with a mean of 8.3.

IN BRIEF:

* This weekend on the radio: The Kid's Day Operating Event, the All-Asia DX Contest (CW), the SMIRK (6-meter) QSO Party, and the West Virginia QSO Party all are on tap this weekend. See June QST, page 87, for details. Just ahead: Field Day. See May QST, page 108, for details. (Remember, some rules have changed this year!)

* Correction: ARRL Vice President for International Affairs Larry Price, W4RA, spotted our gaffe in The ARRL Letter, Vol 17, No 24. He writes: "I am amused that David Sumner made the AAA correct their letter in which they called the ARRL the Amateur Radio Relay League, and you call the AAA the Automobile Club of America." Of course, the AAA is the American Automobile Association, more often called "Triple A." (No, it wasn't a matter of turnabout being fair play, and we regret the error--Ed).

* Correction/Amplification: Fred Lehmann, WA0PBL, in Sioux Falls, South Dakota, reports that two hams lived in Spencer, South Dakota, which was devastated by a tornado in late May (see "Hams Weather Storms," The ARRL Letter, Vol 17, No 23). As we reported, the Rev Ward Satterlee, W0MON, lost both his wife and his home. Lehmann reports that the other ham, Leslie Zeller, N3SMR, also lost his home, and Zeller's son--the only one at home when the tornado struck--was injured. Ironically, Lehmann says, Zeller and his family moved to Spencer about a year ago after they lost their home to flooding in Pennsylvania.

* Job opening at HQ: There's a job opening at ARRL Headquarters in Newington, Connecticut, for an Assistant Contest Manager to work with the Contest Manager in administering the ARRL Contest Program. Job-related qualifications include knowledge about, and interest in, the League's varied contest program. The candidate should be familiar with the ARRL DXCC List, ARRL sections and divisions, and current contesting issues. An Amateur Radio license, writing skills, PC familiarity, including DOS, Windows, e-mail, and database management skills are required. Accuracy is a must. Some travel and ability to speak in forums required. Beginning salary, $18,000 to 20,000,

depending upon qualifications. Send resumes to Bill Kennamer, K5FUV, Membership Services, ARRL, 225 Main St. Newington CT 06111. No telephone calls, please. The ARRL is an Equal Opportunity Employer.

* ARRL launches RADIOS On-Line: The League has inaugurated a new on-line classified advertising system, RADIOS On-Line, available through the ARRLWeb page. This system will complement, not replace, the current Ham Ads in QST. Billing can be handled on line via credit card, or users can request to be billed. Items for sale classified system is going up this week. The system lets you place ads, search ads for particular items, view all ads, and check out the current QST Ham Ads. The rate is 50 cents per word for 30 days, $2.50 minimum, 100 words maximum. Advertising must pertain to products and services relating to Amateur Radio. All RADIOS On-Line ads submitted are reviewed by ARRL staff. Ads will appear on-line within 24 hours or by the next business day if submitted on a weekend or holiday. You don't need to be an ARRL member to use this service. Details are on the Web. Check it out at http://www.arrl.org/ads/RadiosOnline/. Contact Robin Micket, N1WAL, at rmicket@arrl.org for further information.

* Court upholds FCC against Free Radio Berkeley: The US District Court for the Northern District of California has issued a permanent injunction against unlicensed broadcaster Stephen Dunifer, operator of Free Radio Berkeley. The 18-page decision reaffirms the FCC's authority to require broadcasters to have a license. The court enjoined Dunifer and "all persons in active concert or participation with him" from broadcasting without a license or causing or enabling unlicensed radio transmissions to occur. Dunifer had claimed the FCC's regulations were unconstitutional. FCC Chairman William Kennard applauded the decision. "The permanent injunction in the Dunifer case, and the FCC's success in the last two years in shutting down over 200 pirate stations, should send a message to all pirate broadcasters: obey the law--and join the FCC in our efforts to expand the legal uses of the public airwaves."--FCC news releases

* $1000 essay contest: Edupage and Educom Review are sponsoring a student contest for previously unpublished essays discussing any educational, organizational, social, or cultural aspect of present or future technology. The best essay wins $1000. Deadline to submit is July 31, 1998. Entries are limited to 1500 words or less and must be sent as an e-mail message in ASCII text and in English to editor@educom.edu. Entries will be evaluated for originality, insight, and clarity of presentation. Decisions will be made by John Gehl and Suzanne Douglas, the editors of Edupage and Educom Review. All decisions will be final. Entrants must be enrolled as fulltime or part-time graduate or undergraduate students in any discipline at an institution of post-secondary education, anywhere in the world. Edupage can be found at http://www.educom.edu/ in the publications section.--thanks to Tom Frenaye, K1KI

* RF safety seminar: ARRL Lab Supervisor Ed Hare, W1RFI, will conduct an RF exposure workshop at the ARRL Southwestern Division Convention, August 14, 1-6 PM. The session defines the new FCC RFX rules, clarifies what is required of ham operators, and even explains the theory behind the

requirements. Want to know what RF does in the near field of an antenna, or how to use software to evaluate RF safety in your own station? Sign up for this five-hour seminar and find out. Space is limited. To register, contact Dan Miller, K3UFG, at ARRL HQ, 225 Main St, Newington CT 06111; tel 860-594-0340, before Aug 4. The fee is $20 for ARRL members and $25 for nonmembers. You'll receive a course workbook, the ARRL RF safety information package, plus five hours of practical information. Participants also might wish to purchase the ARRL's new book, RF Exposure and You. It's item 6621, and it's $15 (plus $4 UPS shipping/handling), available via the ARRLWeb site, http://www.arrl.org, or by calling, toll-free, 888-277-5289. This workshop is sponsored by the ARRL Educational Activities Department. Those who attend the entire session earn 0.5 Continuing Education Units.

* Rockoon II launch set: A group of amateur space enthusiasts plans to launch the first amateur rocket into space June 20. The Huntsville Alabama L5 Society (HAL5) will launch the "rockoon" from a high-altitude balloon as part of its Project High Altitude Lift-Off (HALO). The balloon will be launched from the Gulf of Mexico off Louisiana. HAL5 made amateur rocketry history in May of last year when it successfully performed the first amateur rockoon mission from a high altitude, and made professional rocketry history by launching the first hybrid rocket from a high altitude (see QST, Aug 1997, page 73). The rockoon will carry amateur television (ATV) cameras transmitting on 434.00 MHz (cable ready TV channel 59) and 1255 MHz. The rocket also will transmit telemetry via APRS packet radio on 441.050 MHz. For more information, see http://advicom.net/~hal5/HALO/.

* Alternative power special event: Special event station NW9D will be on the air June 19-21, from the site of the Midwest Renewable Energy Fair at the Portage County Fairgrounds, Amherst, Wisconsin. Operation will be on all HF bands (as propagation allows) on SSB and data modes. Power for station equipment will be supplied by storage batteries, solar panels, and the wind/solar plant that will power the entire fair. Operating hours are expected to be from approximately 9 AM until 4 PM CDT, with some evening hours possible. Home Power magazine will offer a certificate. QSL to Home Power, Box 520, Ashland, OR 97520.--thanks to Richard Perez, N7BCR, and Bill Davidson, KA9SWW

* Exam-a-thon set for FD weekend: The Crystal Radio Club of Rockland County, New York, W2DMC, will host its third annual Exam-a-thon on Field Day weekend, June 27 and 28. The Exam-a-thon is an around-the-clock license exam session at the club's Field Day site. The club's VE team will administer exams from 8 AM Saturday through 12 noon Sunday, no appointment is necessary. Over the past two years, the Crystal Radio Club has tested more than 30 applicants during its Field Day Exam-a-thon. One person was even tested at midnight in the back of an ambulance!--The Hudson Loop

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

The ARRL Letter
Vol 17, No 25, Part II

TIMEWAVE FILES CHAPTER 11 BANKRUPTCY

Amateur Radio equipement manufacturer Timewave Technology (http://www.timewave.com) of St Paul, Minnesota, has filed for Chapter 11 bankruptcy. Timewave President Randy Gawtry, K0CBH, says Timewave plans to continue normal operations while it prepares to file a reorganization and debt payment plan with the federal bankruptcy court. "The process now is in the early stages," he said. The move comes a little more than a year after Timewave acquired rights to the AEA digital product line after AEA ran into financial trouble. Timewave is best known for its DSP filter accessories, such as the DSP-599zx.

"We're still operating and we're still doing repairs and upgrades for our DSP products," Gawtry said. "Nobody should panic."

Gawtry said the company still expects to have its new DSP-2232zx multimode TNC on the market later this year. But he conceded that under Chapter 11 bankruptcy, "any number of things can happen." The company has 60 days to file its reorganization plan, which must be approved by the court and by the company's creditors.

CHANGES AT CUSHCRAFT

Antenna maker Cushcraft has announced that Ed Hammond, WN1I, will be the company's new Amateur Marketing and Sales Manager. Hammond, who has worked at Cushcraft previously, replaces Amateur Radio Product Manager Art Hambleton, K1ART, who resigned. Cushcraft President Steven Best says Hambleton left Cushcraft "to pursue another career opportunity elsewhere and was not asked to leave the company."

Best said that Hambleton's job had become more sales and customer support-oriented, while Hambleton was more comfortable "in the product development end of the business." Hammond's job, he said, will involve sales and support but not product development.

Earlier this year, Cushcraft hired Adam Alevy, N1FXT, as its engineering vice president. Also now on board are engineering technicians Danny Horvat, T93M, and Pete Jovanovic, T94OF, from Bosnia, and Paul Randazzo, NW1U, as its amateur customer support rep. Amateur and commercial marketing and sales have been combined into a single department, Best said.

Best also took the opportunity to reiterate that Cushcraft does not plan to abandon the amateur market. "We are and will remain fully supportive and

committed to the amateur marketplace," Best said, pointing to the company's recent presence at the Dayton Hamvention where Cushcraft introduced its new X7 and X9 beams and the R6000 vertical. The company also has improved the trap design of the R7000 and will debut a new line of HF monobanders.

Best also said Cushcraft will unveil a new Web page within the next few weeks, and that he "definitely" plans to get his ham ticket.

SATELLITE LAUNCH WINDOWS SET

The tentative launch date for the TechSat-1B Amateur Radio satellite has been set for June 23-24. That announcement from Assi Friedman, 4X1KX/KK7KX, of Arizona State University. The Russian Space Agency is providing the ride into space.

TechSat-1B is a digital store-and-forward satellite using 9600-baud frequency-shift keying (FSK), much like UO-22, KO-23 or KO-25. TechSat-1B will feature uplinks on 145 MHz and 1.2 GHz and downlinks in the 70-cm band. Friedman says that a telemetry decoding program for the satellite soon will be available.

Elsewhere, the TMSAT microsatellite is set for a June 23 launch from Russia's Baikonur Cosmodrome in Kazakhstan. It will be placed into a 821-km sun-synchronous orbit. An overview of the TMSAT commissioning plan is available at http://www.ee.surrey.ac.uk/EE/CSER/UOSAT/amateur/tmsat/tmsat_commissioning_plan.html. Further information and updates are to be posted to UO-22. Uplink frequencies will be 145.925 and 145.975 MHz; downlinks will be at 436.925, 436.900, 436.950, and 436.975 MHz.

Meanwhile, word from Alabama is that the SEDSAT-1 Amateur Radio satellite now is scheduled for launch on a Delta II space vehicle sometime in October. The exact launch date has not been confirmed. SEDSAT will fly as a secondary passenger along with the JPL Deep Space One mission.

SEDSAT-1, under construction at the University of Alabama's Huntsville campus under the direction of Dennis Wingo, KD4ETA, now is complete and is in the final stages of testing. It was to have been launched in July, but problems with the primary payload delayed the launch until this fall. SEDSAT-1 will carry a Mode-L digital transponder as well as a Mode A analog transponder.--AMSAT News Service; HaGAL International

SOLAR UPDATE

Solar scribe Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity over the past week was about the same or slightly lower than the week previous. Average sunspot numbers were about the same and average solar flux was down about eight points. Geomagnetic activity was stable, except for June 14 when the planetary K index briefly rose to 5. Planetary A index for the day was 15. Average solar flux for the previous 90 days actually went down one point to 109, and solar flux over the past week was below this value on four out of seven days, indicating a flat trend.

Solar flux is predicted to be about 100 June 19-21, and the Planetary A index is forecast to be 12, 15 and 8. Flux values are expected to drop below 100 after June 21, hit a minimum of 90 on June 26 and 27, and rise above 100 again after July 2 peaking around 106 on July 5 and 6. Unsettled geomagnetic conditions may return around July 1-4 and July 7.

Overall conditions for the next few weeks are predicted to be flat, with no increase in solar activity. This is based on recurring conditions observed as the sun goes through a 27.5 day rotation. Viewing recent solar images on the Web shows few sunspots, and, of the few visible, they seem to be concentrated outside of the central area that would most affect the earth.

Sunspot numbers for June 11 through June 17 were 95, 122, 148, 104, 79, 71, and 94, with a mean of 101.9. The 10.7-cm flux was 112.4, 112.2, 110.5, 101.9, 100.4, 104, and 100.6, with a mean of 106. The estimated planetary A indices were 8, 8, 6, 15, 8, 8, and 5, with a mean of 8.3.

IN BRIEF:

* This weekend on the radio: The Kid's Day Operating Event, the All-Asia DX Contest (CW), the SMIRK (6-meter) QSO Party, and the West Virginia QSO Party all are on tap this weekend. See June QST, page 87, for details. Just ahead: Field Day. See May QST, page 108, for details. (Remember, some rules have changed this year!)

* Correction: ARRL Vice President for International Affairs Larry Price, W4RA, spotted our gaffe in The ARRL Letter, Vol 17, No 24. He writes: "I am amused that David Sumner made the AAA correct their letter in which they called the ARRL the Amateur Radio Relay League, and you call the AAA the Automobile Club of America." Of course, the AAA is the American Automobile Association, more often called "Triple A." (No, it wasn't a matter of turnabout being fair play, and we regret the error--Ed).

* Correction/Amplification: Fred Lehmann, WA0PBL, in Sioux Falls, South Dakota, reports that two hams lived in Spencer, South Dakota, which was devastated by a tornado in late May (see "Hams Weather Storms," The ARRL Letter, Vol 17, No 23). As we reported, the Rev Ward Satterlee, W0MON, lost both his wife and his home. Lehmann reports that the other ham, Leslie Zeller, N3SMR, also lost his home, and Zeller's son--the only one at home when the tornado struck--was injured. Ironically, Lehmann says, Zeller and his family moved to Spencer about a year ago after they lost their home to flooding in Pennsylvania.

* Job opening at HQ: There's a job opening at ARRL Headquarters in Newington, Connecticut, for an Assistant Contest Manager to work with the Contest Manager in administering the ARRL Contest Program. Job-related qualifications include knowledge about, and interest in, the League's varied contest program. The candidate should be familiar with the ARRL DXCC List, ARRL sections and divisions, and current contesting issues. An Amateur Radio license, writing skills, PC familiarity, including DOS, Windows, e-mail, and database management skills are required. Accuracy is a must. Some travel and ability to speak in forums required. Beginning salary, $18,000 to 20,000,

depending upon qualifications. Send resumes to Bill Kennamer, K5FUV, Membership Services, ARRL, 225 Main St. Newington CT 06111. No telephone calls, please. The ARRL is an Equal Opportunity Employer.

* ARRL launches RADIOS On-Line: The League has inaugurated a new on-line classified advertising system, RADIOS On-Line, available through the ARRLWeb page. This system will complement, not replace, the current Ham Ads in QST. Billing can be handled on line via credit card, or users can request to be billed. Items for sale classified system is going up this week. The system lets you place ads, search ads for particular items, view all ads, and check out the current QST Ham Ads. The rate is 50 cents per word for 30 days, $2.50 minimum, 100 words maximum. Advertising must pertain to products and services relating to Amateur Radio. All RADIOS On-Line ads submitted are reviewed by ARRL staff. Ads will appear on-line within 24 hours or by the next business day if submitted on a weekend or holiday. You don't need to be an ARRL member to use this service. Details are on the Web. Check it out at http://www.arrl.org/ads/RadiosOnline/. Contact Robin Micket, N1WAL, at rmicket@arrl.org for further information.

* Court upholds FCC against Free Radio Berkeley: The US District Court for the Northern District of California has issued a permanent injunction against unlicensed broadcaster Stephen Dunifer, operator of Free Radio Berkeley. The 18-page decision reaffirms the FCC's authority to require broadcasters to have a license. The court enjoined Dunifer and "all persons in active concert or participation with him" from broadcasting without a license or causing or enabling unlicensed radio transmissions to occur. Dunifer had claimed the FCC's regulations were unconstitutional. FCC Chairman William Kennard applauded the decision. "The permanent injunction in the Dunifer case, and the FCC's success in the last two years in shutting down over 200 pirate stations, should send a message to all pirate broadcasters: obey the law--and join the FCC in our efforts to expand the legal uses of the public airwaves."--FCC news releases

* $1000 essay contest: Edupage and Educom Review are sponsoring a student contest for previously unpublished essays discussing any educational, organizational, social, or cultural aspect of present or future technology. The best essay wins $1000. Deadline to submit is July 31, 1998. Entries are limited to 1500 words or less and must be sent as an e-mail message in ASCII text and in English to editor@educom.edu. Entries will be evaluated for originality, insight, and clarity of presentation. Decisions will be made by John Gehl and Suzanne Douglas, the editors of Edupage and Educom Review. All decisions will be final. Entrants must be enrolled as fulltime or part-time graduate or undergraduate students in any discipline at an institution of post-secondary education, anywhere in the world. Edupage can be found at http://www.educom.edu/ in the publications section.--thanks to Tom Frenaye, K1KI

* RF safety seminar: ARRL Lab Supervisor Ed Hare, W1RFI, will conduct an RF exposure workshop at the ARRL Southwestern Division Convention, August 14, 1-6 PM. The session defines the new FCC RFX rules, clarifies what is required of ham operators, and even explains the theory behind the

requirements. Want to know what RF does in the near field of an antenna, or how to use software to evaluate RF safety in your own station? Sign up for this five-hour seminar and find out. Space is limited. To register, contact Dan Miller, K3UFG, at ARRL HQ, 225 Main St, Newington CT 06111; tel 860-594-0340, before Aug 4. The fee is $20 for ARRL members and $25 for nonmembers. You'll receive a course workbook, the ARRL RF safety information package, plus five hours of practical information. Participants also might wish to purchase the ARRL's new book, RF Exposure and You. It's item 6621, and it's $15 (plus $4 UPS shipping/handling), available via the ARRLWeb site, http://www.arrl.org, or by calling, toll-free, 888-277-5289. This workshop is sponsored by the ARRL Educational Activities Department. Those who attend the entire session earn 0.5 Continuing Education Units.

* Rockoon II launch set: A group of amateur space enthusiasts plans to launch the first amateur rocket into space June 20. The Huntsville Alabama L5 Society (HAL5) will launch the "rockoon" from a high-altitude balloon as part of its Project High Altitude Lift-Off (HALO). The balloon will be launched from the Gulf of Mexico off Louisiana. HAL5 made amateur rocketry history in May of last year when it successfully performed the first amateur rockoon mission from a high altitude, and made professional rocketry history by launching the first hybrid rocket from a high altitude (see QST, Aug 1997, page 73). The rockoon will carry amateur television (ATV) cameras transmitting on 434.00 MHz (cable ready TV channel 59) and 1255 MHz. The rocket also will transmit telemetry via APRS packet radio on 441.050 MHz. For more information, see http://advicom.net/~hal5/HALO/.

* Alternative power special event: Special event station NW9D will be on the air June 19-21, from the site of the Midwest Renewable Energy Fair at the Portage County Fairgrounds, Amherst, Wisconsin. Operation will be on all HF bands (as propagation allows) on SSB and data modes. Power for station equipment will be supplied by storage batteries, solar panels, and the wind/solar plant that will power the entire fair. Operating hours are expected to be from approximately 9 AM until 4 PM CDT, with some evening hours possible. Home Power magazine will offer a certificate. QSL to Home Power, Box 520, Ashland, OR 97520.--thanks to Richard Perez, N7BCR, and Bill Davidson, KA9SWW

* Exam-a-thon set for FD weekend: The Crystal Radio Club of Rockland County, New York, W2DMC, will host its third annual Exam-a-thon on Field Day weekend, June 27 and 28. The Exam-a-thon is an around-the-clock license exam session at the club's Field Day site. The club's VE team will administer exams from 8 AM Saturday through 12 noon Sunday, no appointment is necessary. Over the past two years, the Crystal Radio Club has tested more than 30 applicants during its Field Day Exam-a-thon. One person was even tested at midnight in the back of an ambulance!--The Hudson Loop

PHASE 3D WON'T FLY THIS YEAR

Phase 3D will not fly this year. AMSAT says the Phase 3D Amateur Radio
satellite will not be aboard when the Ariane 503 launch vehicle goes into
space this October. In addition to the Atmospheric Reentry Demonstrator, the
European Space Agency will launch a dummy Eutelsat payload instead of Phase
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

3D, according to a joint ESA/CNES/Arianespace news release. Arianespace is a commercial company that markets Ariane launches.

"Essentially we were bought out by strategic and commercial interests," said a glum AMSAT-NA Vice Executive President Keith Baker, KB1SF.

AMSAT-DL President Karl Meinzer, DJ4ZC, says it's clear to him that Arianespace wants to retain the option of swapping a real Eutelsat payload for the dummy right before launch. "We simply could not compete with this by our offer of $1 million and some moral justification of not flying ballast," he said. "So we wept some, and, that done, let us now look forward."

In January, ESA agreed to carry Phase 3D as a backup on Ariane 503, if it could not find a paying customer, or to use its "best efforts" to get Phase 3D on another flight if a paying customer came along. As it turned out, however, Arianespace agreed--in a surprise move--to cover $40 million in Ariane 5 development funds resulting from the failure of the Ariane 501 test launch. In return, Arianespace asked to be allowed to pick the secondary payload for Ariane 503, the last in a series of qualification flights.

"This is obviously very disappointing news," said AMSAT-NA President Bill Tynan, W3XO. "We must, however, persevere and continue our present course to get the satellite tested and ready for a launch. And we pledge to do so."

Baker said AMSAT is continuing to look for a suitable launch opportunity and now is looking at "other agencies" instead of limiting itself to ESA's Ariane program. "We're standby passengers," he said. Baker said he's often asked why the space shuttle couldn't launch Phase 3D. He says that's because the shuttle can't put the satellite into the proper orbit.

Meinzer said he thinks the chances "are not bad" that Phase 3D will get aboard an Ariane 5 flight next year. "But also in parallel we should and will pursue other launch options," he advised the Phase 3D team. "Although in the short term we have a problem, in the medium term I am reasonably optimistic. So keep your fingers crossed."

Meinzer said Arianespace put a $10 million price tag on a launch, a figure he called "clearly out of reach." But he also held out the hope that ESA would negotiate further and that the German government might be willing to help with funding.

For the immediate future, Baker said, AMSAT plans now to continue preparations to make Phase 3D flight ready. The satellite is undergoing final construction and testing at the Phase 3D Integration Lab in Orlando, Florida. "Obviously, we will have to evaluate our options on how best to place the satellite in temporary storage," he said.

The Ariane 503 announcement is the latest setback for Phase 3D. AMSAT has been trying to find a ride for Phase 3D for the past couple of years and, until now, had pinned its hopes on the Ariane program. AMSAT-NA was forced to restart its Phase 3D fundraising effort late last year after determining that it still needed at least another $270,000 to meet its share of the Phase 3D costs. More recently, AMSAT-NA has been offering hams--for a $25

minimum donation--the opportunity to fly their QSL cards into space aboard Phase 3D. Participants' QSL cards will be scanned and put on a CD-ROM aboard the satellite.

Baker says it's too soon to tell how the latest turn of events will affect fundraising.

Phase 3D came closest to a launch aboard Ariane 502 last year but was bumped after it could not complete necessary structural modifications in time to meet the launch schedule. The changes became necessary at the eleventh hour after ESA imposed more stringent vibration and stress standards on Ariane 5 payloads.

NEW VANITY FEE SET

The vanity call sign application fee will drop to $13 effective September 14, 1998. That's the word from the FCC's Terry Johnson in the Office of Managing Director. The new fee will be for the ten-year term, payable at the time of application for a new, renewed, or reinstated license. The current vanity call sign application fee is $50. Earlier this year, the FCC had proposed dropping the fee to $12.90. The actual fee was "rounded up," Johnson said.

The FCC says it has no plans to refund the difference between the current fee and the new fee for applicants who submit applications before the new fee schedule goes into effect in September.

The FCC released its revised schedule of regulatory fees for all services for fiscal year 1998 this week, and it's soon expected to be available on the FCC's Web site. The Commission is required to collect almost $163 million during FY 1998.

The FCC calculated the new fee based on an expected 10,000 applicants during FY 1998.

HAMS EAT SMOKE IN FLORIDA

Florida ARES and RACES teams--usually prepared to focus on the annual hurricane season that began June 1--have found themselves dealing instead with tornadoes, floods, sink holes, drought, and, most recently, devastating wild fires in several parts of the Sunshine State.

On June 6, several wildfires spawned by a 100-day drought broke out almost simultaneously in Florida's Flagler, Seminole, Brevard, and Lake counties. The Flagler fire consumed nearly 1700 acres, destroyed 19 homes, and damaged others. As a result, part of I-95 was shut down and the Red Cross set up a shelter with Amateur Radio Support. The Lake and Brevard fire consumed a large area but only minimal damage to homes.

Seminole County Emergency Management declared a state of emergency the evening of June 6. Seminole County EC Dick Fess, K4FUY, activated an ARES-RACES net, and the Red Cross opened a shelter close to the fire zone. Bob Wendoth, KS4CI, and Seminole County ARRL PIO Norm Lauterette, WA4HYJ, set up at the shelter in contact with the county EOC. "Our ARES/RACES direct

communication link to the EOC was very valuable," Lauterette said.

Nearly 300 residents were evacuated from the 1800-acre Geneva fire zone, and nearly 60 took refuge in the shelter. "Shifting winds caused the tree-top-high fire to leapfrog in several directions, forcing residents to flee with just the clothes on their backs," said Lauterette. "Families were split up, some missing, others known to have stayed behind."

In addition to tracking the flames, ham radio operators helped to check up on the whereabouts of individuals, handle medical needs, and report the condition of homes, pets and property. Rescue dog handler Allen Wilson, WB7BCI, also stood by at the shelter with his partner, Duke, if needed. All told, 17 hams volunteered their services in Seminole County. Most evacuees were allowed to return to their homes later the next day. In all, Lauterette and Mike Welch, KF4HFC, report, 54 homes and structures were destroyed in the four Central Florida fires.

Ironically, South Florida conducted its Simulated Emergency Test (SET) the same weekend. Lauterette says the fire duty provided solid exercise for the other emergencies that he's sure lie ahead.

Ten days later, on June 16, Alachua County ARES/RACES responded to a call for communication assistance from the county's emergency management office after brush fires broke out in an approximately 16-square mile area. As of week's end, the fires burned more than 11 square miles and ultimately forced evacuation of the entire town of Waldo, some 1100 people in all. Hams assisted at shelters, in the EOC, and on the scene. At one point, Red Cross had to move a shelter and hams helped coordinate supplies and count heads. In all, at least a dozen hams have participated in the fire emergency.

Jeff Capehart, KE4NIV, an ARES and SKYWARN member as well as a volunteer firefighter, said severe thunderstorms passed through the area in the midst of the fire and evacuation. "Two severe thunderstorm warnings were issued for Alachua County," he said. "Since hams were already at the EOC, a SKYWARN net was activated on top of the ARES net." Capehart says the rain brought some relief and helped to control the fires.--thanks to Norm Lauterette, WA4HYJ; Mike Welch, KF4HFC; Carla Sikorsky, KF4FRE; and Jeff Capehart, KE4NIV

FCC PROPOSES 5.9 GHZ ALLOCATION

The FCC has proposed allocating 5.850 to 5.925 GHz for use by intelligent transportation systems (ITS). The Amateur Service has a secondary allocation at 5.650 to 5.925 GHz with government radar systems and nongovernment fixed satellite service uplinks. Under the proposal, dedicated short range communications (DSRC) highway safety systems would share the band as coprimary users.

The FCC seeks comments on the need for nationwide operational standards and channelization and on the potential for DSRC operations to share with other services.

The June 11 NPRM was in response to a rulemaking petition from the Intelligent Transportation Society of America (ITS America) requesting the allocation on a coprimary basis. Proponents said the band is optimal for DSRC on the basis of propagation, consistency with international allocations, and compatibility with existing users.

ITS America, a nonprofit organization dedicated to promoting ITS, has worked with the ARRL and others to develop a sharing plan. The League has said it is prepared to work with ITS entities to resolve spectrum sharing issues.

In its comments, the ARRL questioned whether the 5.9 GHz band was appropriate for DSRC and urged the FCC to look into frequencies above 40 GHz, where DSRC systems could avoid interference from other users. The League said the ITS proposal and the FCC decision to deploy unlicensed National Information Infrastructure (U-NII) devices in the band could render 175 MHz of spectrum in the 5.8 GHz range significantly less useful to hams.

3M, a DSRC proponent, argued that hams could be displaced from the band because they already have plenty of spectrum between 50 MHz and 50 GHz and make only light use of 5.9 GHz. 3M suggested a powerful amateur station could "swamp out" DSRC services.

The FCC said interference problems that might crop up could be resolved by changing the frequency of the amateur operation, by power reduction, or by using directional antennas.

Possible ITS applications include what's known as automated roadside safety inspection. This would permit transmission of vehicle safety and other data between roadside inspection stations and commercial trucks moving at highway speeds, the FCC said. Another potential application, incident management operations, would use roadway sensors and DSRC-equipped vehicles to more quickly detect traffic congestion and dispatch any emergency personnel or take other action. Other emerging DSRC applications include traffic control and en-route driver information systems.

ITS DSRC transmissions would be "narrowly focused and rapidly dissipating signals," according to ITS America. The FCC proposes a maximum of 30 W EIRP for DSRC systems.

Comments on ET Docket 98-95 are due 75 days after publication in the Federal Register. The complete NPRM is available on the FCC Web site at http://www.fcc.gov.

FCC ASKS GERMANY TO SILENCE BROADCASTER ON 3945 KHZ

Sometimes it helps to complain. The FCC's High Frequency Direction Finding Group has asked German authorities for their help in eliminating a broadcast station in Germany that's operating on 3945 kHz. Members of the ARRL Monitoring System (MONSYS) and other US hams had complained to the FCC and to the ARRL about the station's presence. Those complaints were forwarded to the FCC. The frequency is not allocated for broadcasting in Europe, which is in ITU Region 1. In Region 1, the 3900 to 3950 kHz band is authorized for aeronautical mobile operation. In the US, in Region 2, the band is allocated to amateur, fixed and mobile.

"Since this station is a source of daily harmful interference to the Amateur Service, we would appreciate any assistance you could provide in eliminating the interference," said Chief Watch Officer/HFDF Group David Larrabee, K1BZ, in a fax June 11 to the Bundesamt fuer Post und Telekommunikation (BAPT), Germany's equivalent of our FCC.

The station on 3945 kHz, identified as The Overcomer Ministry, has been monitored at several East Coast locations as well as by the FCC in Columbia, Maryland. It broadcasts on AM from Juelich, Germany.

K1TWF APPOINTED NEW ENGLAND VICE DIRECTOR

ARRL President Rod Stafford, W6ROD, has appointed Michael N. Raisbeck, K1TWF, of Chelmsford, Massachusetts, as New England Division Vice Director. The appointment is effective immediately. Raisbeck will complete the term of former Vice Director Don Haney, W9WW (ex-KA1T), who resigned when he moved out of the division earlier this year. The term expires January 1, 1999.

Raisbeck is vice president of Ready-to-Run Software Inc, with duties in corporate management and as general counsel. His wife, Susan, is WN1V. Raisbeck graduated from Northeastern University in 1976 with a bachelors degree in electrical engineering, from Suffolk University Law School in 1981 with a JD (cum laude), and from the University of Massachusetts in 1989 with a masters in engineering management.

Raisbeck is fluent in Italian and has a working knowledge of Spanish. He'll attend his first ARRL Board meeting in July.

Members may contact Raisbeck at 85 High St, Chelmsford, MA 01824; e-mail k1twf@arrl.org.

Required for club repeater project. :-

Would someone be kind enough to supply me with
a simple circuit for a regulator suitable for battery charging
a 12v battery system powered by a solar array of up to 6 amps.

Thanks

Alan gilly@camtech.net.au

I agree with Gary, something needs to be done to nip this nascent problem in the bud. In my area (Phoenix, AZ) there are a number of 2 meter nets that regularly re-broadcast W1AW bulletins, and other matters germane to amateur radio, notably (until it went under) Len Winkler's program. All that is fine by me, though the gate may be swinging wide for all sorts of nonsense and chaos. Can someone enlighten me as to the recent history of variances and laxity, viz. spectrum auctions, FCC-non-enforcement, FRS, etc. Which administration(s) are responsible, and what Sentors and Representatives are to blame. I understand that John McCain is a committee chairman of a Senate committee that oversees matters of interest to the amateur community. What do you all think of his tenure where ham affairs are concerned. I must say, speaking as the Noam Chomsky liberal that I am, I find McCain's brand of conservatism intellectually stimulating, respectful, and pragmatic. Refreshing. I even voted for him last outing(gasp! a Republican?!!!)

Dear Burt,
Eventually I hope you will consider checking yourself into a program
which offers the help you need to move your life forward. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you are under care.
Please don't listen to those who talk as if they know you and your family
personally,
as I'm sure none of the things they say about your past is true. You,
with the proper guidance and care, can forgo your preceived necessity
to utter vile and demeaning things toward others.
Hopefully you will take this is the spirit in which it is written and
close this dark chapter of your life and brighten your own and your
loved ones lives as you move to the future.
Wishing you the best.

Congratulations !!!

I hope you'll visit and join a Ham Radio Club near you.
Please check out the ARRL WEB pages to find a club near you:

http://www.arrl.org/field/club/clubsearch.phtml

Every club is different; you may find some clubs are warm and
open, while others may seem cold to newcomers. Some clubs
may be really into HF and others may be into other things.
If there are several clubs in your area, check several out
before you join one (or more). Clubs can be a good source
of information for new hams.

Remember in ANY large group of people, there are good people
and then there are the STUPID JERKS. Seek out the the first
kind and ignore the jerks.

The 2 meter band is very active; a repeater handbook will tell
you the frequency, positive/negative offset, and PL tone (if used).
However, what the book won't be able to tell you is what the
group of users for that repeater are like. I can point to
repeaters in my are that receive heavy usage, yet some other
repeaters receive very little use. Those that receive a
lot of usage have a style in which the group interacts.
I stongly suggest that you listen to a given repeater a lot
to get to know the feel of the group before you come on the
air with that repeater.

Many new hams think that one shoud call "CQ CQ CQ, this is ..."
on a repeater. DO NOT DO THAT. We are never that formal
on VHF or UHF. You could say, "This is <call sign> listening."
However unless people know you, odds are that you won't get
an answer. If you listen to the repeater for a while,
you'll hear someone say, "This is <KZ6ZZZ> ..." - BINGO -

Call him or her back, "<KZ6ZZZ> this is <your call sign >
the name here is ..." Few hams will ignore you when you
call them. Don't expect a long conversation, but you will
have a chance to introduce yourself and ask how you signal is.

You may want to keep a record of you contacts on that repeater;
just to remember names and call signs. It may take a bit, but
after a while others will get to know you. After a while,
you can say, "This is <your call sign> ..." and others who
have talked to you several times before may answer.

Many ham clubs have nets on the repeaters. This might be on
a given day of the week at a given time. You'll need to ask
the hams in your area about 2 meter nets. There are many different
kinds of nets. With some you may get several chances to talk
and with others you may just get one shot to say, "HI." Still,
some Ham Nets can be a lot of fun.

Many Ham Clubs support Public Non-Profit Events. If a club in
your area is going to work an event, I suggest you sign up
for a few. Providing communication at an event can be both
fun and a learning experience.

Well, I could go on and on, but I should get going.
I hope you find my list of tips helpful.

73,

Bob
KQ6WQ

5242. Stevensons Mulatto Slaves

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-20 00:00:00 UTC
From: TheTechTeacher@my-dejanews.com
Message-ID: <6mf15i$b7u$1@nnrp1.dejanews.com>
Source record: 169465

Dear Sirs,

While traveling the American countryside, I have unearthed documents of the sale of one Ujimbwaya to one Jedidiah Stevenson of Manassas, Virginia. Said female slave later gave birth, records, to a baby mulatto boy, now presumed to be the grandfather of our own Karl. Stevenson. Surely Mr. Stevenson should not, pardon kettle black. One would think he would be more sensitive to the plight of his fellow persons of colour and perhaps endeavour to aid their social, political and economic advancement. This is the opinion of one ardent abolitionist, who despises the pernicious institution of chattel slavery in the 20th century. Perhaps being a lighter shade of pigment, Karl seeks to own others ? This gentlemen, will my America. How can a man of color embrace the wizardry and pagentry of the KKK in Jasper ? The same contorted way in which Hitler, an admiitted Jew, slaughtered helpless thousands. Shame on you, Stevenson.

I am deeply outraged this Virginia night,

Raul Bloodworth, esq.

I may not measure up to the intelligence scale Mike, but I will be
glad to answer your question. Springbok and Chesapeake Bay are 10-10
chapters where members not only exchange 10x numbers but their
chapter numbers as well. There are dozens of different chapters all
over the world. This activity is sometimes referred to as "paper
chasing".

Technically, but as a plain old SWLer (who is studying the Morse for a General class license), I rather enjoy them. They are ham-related, informative, and beat the heck out of "Well, I'm running a dipole at the required 6/8ths wavelength above the north end of my property even though the south end of the antenna bends downward slightly."

You STILL have not established that Dan is not disabled. I am STILL NOT "on record as supporting government handouts for those ble to work for a living". Far from it. A disability pension is NOT a handout. If you have a problem with that, too bad. If you think it is a bogus pension, and that Dan is not disabled, please share your reasoning with us. I assume that since the VA doctors declared him disabled, that he is disabled. A reasonable assumption unless I see a compelling argument otherwise. You have not presented one. You will not present one. You have had your chance. I am out of this thread.

You lose again, Drew.

Remember... propogation to points west will be open later than to points east, where it has been dark longer. Also we can expect higher freqs to be open later as the sunspot cycle progresses. Simply assuming that 10 is, was, and always will be dead after sundown is not quite correct. I haven't listened to 10 or 12 meters in a couple of years, but 15 has been open fairly late. I just might give 10 a listen tonight....

I find I agree with some of your observations, Drew. There is in fact a lot of reverse discrimination in this country. I find it only vaguely troubling myself, and not something to become preoccupied with. You are very outspoken on this issue... I suppose that is admirable. Since you are such a vigorous spokesman against this outrage, is it safe to assume that you are DOING something about the problem, and not merely inciting people with it?

I think this will be my last word on THIS subject too.

Source record: 169478

So if you have the July issue of QST, you saw that Hygain has joined Mosley in going "factory direct" with their products. Their advert sayes they will offer "A significant cost savings..."

Well, I visited their web-site tonight, as I need to replace my 25yr old HAM-M. The model I selected was the HAM-IV, which has specs similar to the old rotator. The price? $409.00, or about 10% below AES!

I my book 10% is not significant. And this was less than 10%; $30 on $400 its less than 8%.

Nice try, Hygain. Now get serious.

5256. Reducing RF interference

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-20 00:00:00 UTC
From: rsirois@stny.lrun.com
Message-ID: <358b206c.5142509@news-server>
Source record: 169479

Folks, have a minor problem that I was hoping I could get some advice on. The problem is RF interference that my station causes to my neighbors. This RFI affects only one item - touch sensitive lamps. My setup is as follows:

Swan 350, feeding two co-fed inverted vees, one cut for 80 meters and the other cut for 40. The feedline is approx 50 feet of RG-8x. All pieces of equipment grounded using 8-guage stranded wire to an 8-foot grounding rod .

The interference occurs only when I'm working on 80/75 meters, anywhere within the band on CW and SSB, whenever my power exceeds an estimated threshold value of slightly less than 120 watts.

I would like to be able to use the full 300+ watts that this radio is rated at, but am forced to reduce power on 80/75 meters to less than 1/3 of that. Whenever I exceed the threshold RF power level the lamps in houses near me cycle up in brightness just as if someone had touched the lamp. This causes quite a light show when working CW by the way.

Has anyone else experienced this situation, and if so, how the heck did you solve the problem? I'm really curious to know, as I'd like to get out and play...

Thanks!

Ray - KC2DCG

Gentlemen,

The learned Direktor Stevenson has shown him self to be, once again, a true gentleman. I admittedly was remiss in that I do not have eating, bathing or relief facilities at my tablet and thus do not sit on the web all day long, 7 days a week, waiting for web pages to change. Thus, I hope that the apology above will be accepted by all, as I here accept Direktor Stevenson's admonition of pandering for members, then staging a superb cover up via the NCI site. Surely a man of his cunning should run for the House if not the Senate ?

My travels take me next to Manassas at first light, and so I bid you all a excellent evening,

Raul Bloodworth, esq.

FCC ASKS GERMANS (WHO LAUGHED SO HARD BEER CAME OU THEIR NOSES) TO SILENCE BROADCASTER ON 3945 KHZ

Sometimes it helps to complain and God knows hams do. The FCC's High Frequency Direction Finding Group has asked German authorities for their help in eliminating a broadcast station in Germany that's operating on 3945 kHz. Members of the ARRL Snitch System (NARCSYS) and other US hams with nothing better to do but bitch about 75 meters when 40 is in shambles, had complained to the FCC (which laughed) as usual and to the ARRL about the station's presence.

Those complaints were forwarded to the FCC, which was described as "so thrilled, what with our big budget and all". The frequency is not allocated for broadcasting in Europe, which is in ITU Region 1, but soon will be. In Region 1, 3900 is authorized for aeronautical mobile operation, which doen't sound like one big long belch contest. In the US, in Region 2, the band is allocated to amateur, fixed and mobile.

"Since this station is a source of daily harmful interference to the Amateur Service, we will kick in our DSP and 2 or 3 filters and eliminate it- those of us who aren't cheap jackasses running rigs from 1978," said Chief Watch Officer/HFDF Group David Busybee, K1BZZZZ, in a fax June 11 to the Reichamt fuer Post und Telekommunikation (RAPT), Germany's equivalent of our FCC, only more fascist, omnipotent and better at harboring wanted Nazis.

The station on 3945 kHz, identified as The Obercomer der Juden Ministry, has been monitored at several East Coast locations as well as by the FCC in Columbia, Maryland. It broadcasts on AM from Achtung Nine Juden, in Germany.

5266. What is Ham Radio ? Part I

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-20 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6mfbd2$o6i$1@nnrp1.dejanews.com>
Source record: 169489

A retired military officer in North Carolina threatens, over the radio, a "Commie" ham in Lithuania. An Ohio teenager uses her computer to slowly upload a chess move to an orbiting space satellite, where it's lost due to a software crash. An aircraft engineer in Florida participating in a "DX contest" swaps call signs and not much else with hams in 330 countries (ending his ham radio adventure) during a single weekend. In California, volunteers lives are saved as part of their involvement in an emergency communications net. And at the scene of a traffic accident on a Chicago freeway, a ham calls for help by screaming frantically.

This unique mix of boredom, selfishness and convenience is the distinguishing characteristic of Amateur Radio. Although hams get involved in the hobby for many reasons, most don't have a basic knowledge of radio technology, regulations or operating principles, as demonstrated by guessing on an examination for a license to operate on radio frequencies known as the "Big Boys' CB Bands." These are reserved by the Federal Communications Commission (FCC) for use by real services one day at intervals from just above the profitless AM broadcast band all the way up into extremely high microwave frequencies, where the biggest technogeeks go to see if they can give themselves cancer.

Who's the Typical Ham?

Amateur Radio operators come from all walks of life -- home movie stars, Christian Scienntologists and Hare Krishna, Branch Davidians, Klansmen, Neo-Nazis, unlicensed doctors, odd students, crooked politicians, unemployed truck drivers and just plain volk. They are all ages (but most are about to drop dead), sexes (although lollipops love LAMBDA), income levels (most have money to burn- lots of it) and nationalities (most are lilly white).
But whether they prefer Morse code sent really crappily on a old brass telegraph key through a low-power transmitter that chirps like a freakin' canary, listening on a hand-held radio to the daily gastrointestinal update from old farts driving around or computer messages transmitted through satellites with 1/16th the reliability and twice the cost of INMARSAT, they all have an interest in what's happening in town and who bought what radio, and they use radio to reach out and bore us to tears.

Even though it is popular to blame everything on Komrade Klinton, this one isn't his fault. The ARRL weaseled rule changes to allow W1AW to broadcast on amateur spectrum many years ago, and K1MAN is simply following the same rules to the letter. *That's* why he hasn't been busted. If the FCC were to bust him, they'd have to bust W1AW too. The ARRL won't stand for that, so K1MAN is safe.

What *both* of them are doing *is* broadcasting under the Parts 2, 3 and 73 definitions of broadcasting. Several others now do it too. The ARRL opened the door with the rule changes to accomodate W1AW's broadcasting activities, and the others followed.

Now I appreciate the information provided by W1AW's broadcasts, and by K1MAN's broadcasts too. But I'm not so happy with some of the others. And if this broadcasting in the amateur bands trend grows, it could make for a nasty mess. I think it is past time to move broadcasting out of the amateur bands. W1AW, K1MAN, and the others should get regular SW broadcast licenses and operate in the shortwave broadcast bands, not in amateur radio service bands.

With today's wide frequency coverage SW receivers and HF transceivers, that should pose no burden on their intended audiences. W1AW is already using Harris commerical broadcast transmitters, so Type Acceptance isn't an issue either. K1MAN and the others may need to upgrade their transmitters, but K1MAN at least certainly has the resources to do so.

Moving to regular SW broadcasting would also legalize a defacto practice of both stations, IE broadcasting content intended for non-amateurs. Both do it now, and it is technically illegal under the Part 97 rules, but it is defacto impossible to prevent since the overlap of interests of amateurs and other SW listeners is often broad, so as a practical matter the FCC turns a blind eye to it.

It sure beats being asked to join a club that you can vote in - but your vote just doesn't matter. Or given a survey that was nearly impossible to answer because the questions and answers were so incredibly poorly written (or engineered to be that way).

pig vomit you are a loser. What a loser got to pick on a innocent 9 yr old little girl. That shows us all what kind of man you truly are. Better hope I don't find your address. I'm warning you now I'm going to post it all over the web. Oh don't give your phone number out on the air LOL ;-) I'm going to post it too. Remeber once its put out over the air its public property. I'm watching and listening for you. My work has me making regular trips to Atlanta in the next few weeks. So watch where you talk and for how long I may just show up in Paulding county. I know alot of people that would pay me for your address. So please be careful. You know your scrapping the bottom of the barrel when you pick on a innocent 9 yr old little girl. Does child abuse run in your family? You seem to bring it up all the time.

If this is unlisted (non-public) information and you purposely make it public in an attempt to cause harm to someone, you may well be guilty of a crime under your state's "anti-stalking" or "anti-harrassment" laws. Personally, I wouldn't risk it.

In light of the obvious need for Karl to be recognized and in light in the fact he is a racially biased inDUHvidual, I have taken the liberty of submitting his webpage

http:///www.users.fast.net/~wa6vse

to several places where he will feel right at home.

The first compilation of groups is established by a group that monitors hate groups. The second (and by far the groups that Carl belongs with) includes such heavy hitters as a variety of KKK subgroups, various white supremacists groups, neo-nazis, military separatists and of course, those that feel that they, by virtue
of their own warped sense of purpose (like being a 225 yr old tech+ with RF background), are far superior to all subhumans
on the planet.

Once his URL is published in these groups, I will let everyone have the addresses so that they too can congratulate the pompous putz on finally making the grade.

Best of luck Stevenson, you ARE somebody!!!

BTW, to think, NCI will be there right along there with him. Too bad. Carl wants to play games??!!! WELL THEN...LET THE GAMES BEGIN!!!

Heil to NCI members! Achtung ! Another "NCI"
Announcement

NCI's secrecy, increasing paranoia, and recent filing of its bitches with the FCC in RM-9259 and RM-9267 have apparently incited the wrath of an anonymous normal person looking to make trouble for the organization and spread truth amongst its cult following.

Yesterday, an unknown number of hams received an e-mail from

"Piss and Moan Net Manager [W2DNE@JUNO.COM]"

claiming to advise them of the establishment of "the NCI trailing list."

THIS MESSAGE IS NOT FROM NCI AND MEMBERS ARE ADVISED TO
"SUBSCRIBE."

"W2DNE" is a random alphanumeric string which has been used before on usenet newsgroups to represent the identity of the person posting messages there attacking no-code advocates, but since we aren't on the radio most people would think it was a random alphanumeric string.

NCI is too stupid to figure out how to establish an "e-mail mailing list" type of information service for its members. NCI members already receive fradulent e-mail bulletins from the Board of Dictators and are free to (and encouraged to) e-mail the board members with their questions, comments, or concerns. These will be summarily dismissed and possibly mocked.

While this hoax appears to be the work of an anonymous pro-coder, there is also a possibility is that this just more NCI paranoia. Again, members are advised to leave NCI in fact, it's a good practice to always be paranoid about unnecessarily providing e-mail addresses or other personal information to upstart terrorist groups on the phone, via the mail, or on the internet.

10-4 ? from the NCI Board of Directors

John,

Any of the current rigs (from 1980 on) should work fine for Pactor. I've used a Yaesu 101, Icom 730 and Icom 735 with excellent results. Nice thing about the Icoms is their auxiliary audio jacks in back so you're not always having to unplug your mike.

You should be able to run any TNC with Linux as long as you have a standard terminal communications program. I don't know if the proprietary software, designed for TNCs, will work with it though.

Good Luck.

Radio Randy

5288. Intro to Ham Radio-Why a License?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-20 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6mh2hvgaf1@nnrp1.dejanews.com>
Source record: 169511

Why a License?

Although the main purpose of Amateur Radio is stupid, it is called the"Amateur Radio Service" because it also has a boring side. The FCC created this "Service" to fill the need for a pool of geeks who didn't care about females or family. In addition, the FCC acknowledged the inability of the hobby to advance the communication and technical skills of radio, and to enhance international goodwill, but allows it anyway. This philosophy has not paid off.

What's the Right License for Me?

Over the years, five basic license classes have devolved into chaos. The higher the class license you have, the better at guessing on a multiple choice test you get. But each higher class license requires progressively more expensive radios, more steel and concrete, as well as bigger amps. So, you can learn the basics or you can become an expert and still know nothing either way.

Today, the "entry level" license for radio amateurs is the 4 year old level "code free" or Technician class license, seen in July QST which requires guessing examinations on radio theory, regulations and operations. Hey, if you can't pass, so what ? We'll just get a doctor to sign a waiver ! The Technician class license gives access to frequencies in the VHF and UHF bands, exciting thrilling medical and family updates on FM, and access to Amateur Radio Orbiting Satellites (OSCARS which usually don't work right due to damage at launch) which opens up communication world-wide and beyond. Many hams have publicly claimed to have QSO'd aliens ! We at ARRL are investigating !

The General class license requires passing around a 25-question exam and a 13 words-per-minute code test, both with the answer key. The Advanced class license adds another 50 question open book examination, and the highest class license, the Amateur Extra, attracts some of the lowest class people ! Radio amateurs carry their licenses with them so they can have proof of their dork status wherever they go in the U.S. Typically, they also keep a radio shack on their belts.

ARRL Bulletin 45 ARLB045
From ARRL Headquarters
Newington CT June 19, 1998
To all radio amateurs

SB QST ARL ARLB045
ARLB045 Hams eat smoke in Florida

Florida ARES and RACES teams--usually focusing on the annual hurricane season that began June 1--have instead found themselves dealing with tornadoes, floods, sink holes, drought, and, most recently, devastating wild fires.

On June 6, several wildfires spawned drought broke out almost simultaneously in Flagler, Seminole, Brevard, and Lake counties. The Flagler fire consumed nearly 1700 acres, destroyed 19 homes, and damaged others. As a result, part of I-95 was shut down and the Red Cross set up a shelter with Amateur Radio Support. The Lake and Brevard fires consumed a large area but only minimal damage to homes.

In Seminole County an ARES-RACES net was activated, and the Red Cross opened a shelter close to the fire zone. Seminole County ARRL PIO Norm Lauterette, WA4HYJ, reports that nearly 300 residents were evacuated from the 1800-acre Geneva fire zone, and nearly 60 others took refuge in the shelter. In addition to tracking the flames, hams helped to check on the whereabouts of individuals, handle medical needs, and report the condition of homes and property. Most evacuees were allowed to return to their homes June 7. In all, 54 homes and structures were destroyed in the four Central Florida fires.

On June 16, Alachua County ARES/RACES responded to a call for help from the county's emergency management office after brush fires broke out in an approximately 16-square mile area. As of June 19, the fires had burned more than 11 square miles and forced evacuation of the entire town of Waldo--some 1100 people in all. Hams assisted at shelters, in the EOC, and on the scene. At least a dozen hams have participated in the fire emergency in Alachua County.

Jeff Capehart, KE4NIV, an ARES and SKYWARN member as well as a volunteer firefighter, said severe thunderstorms passed through the area in the midst of the fire and evacuation, so a SKYWARN net was activated on top of the ARES net. Capehart says the rain brought some relief and helped to control the fires.

PHASE 3D WON'T FLY THIS YEAR

Phase 3D will not fly this year. AMSAT says the Phase 3D Amateur Radio satellite will not be aboard when the Ariane 503 launch vehicle goes into space this October. In addition to the Atmospheric Reentry Demonstrator, the European Space Agency will launch a dummy Eutelsat payload instead of Phase 3D, according to a joint ESA/CNES/Arianespace news release. Arianespace is a commercial company that markets Ariane launches.

"Essentially we were bought out by strategic and commercial interests," said a glum AMSAT-NA Vice Executive President Keith Baker, KB1SF.

AMSAT-DL President Karl Meinzer, DJ4ZC, says it's clear to him that Arianespace wants to retain the option of swapping a real Eutelsat payload for the dummy right before launch. "We simply could not compete with this by our offer of $1 million and some moral justification of not flying ballast," he said. "So we wept some, and, that done, let us now look forward."

In January, ESA agreed to carry Phase 3D as a backup on Ariane 503, if it could not find a paying customer, or to use its "best efforts" to get Phase 3D on another flight if a paying customer came along. As it turned out, however, Arianespace agreed--in a surprise move--to cover $40 million in Ariane 5 development funds resulting from the failure of the Ariane 501 test launch. In return, Arianespace asked to be allowed to pick the secondary payload for Ariane 503, the last in a series of qualification flights.

"This is obviously very disappointing news," said AMSAT-NA President Bill Tynan, W3XO. "We must, however, persevere and continue our present course to get the satellite tested and ready for a launch. And we pledge to do so."

Baker said AMSAT is continuing to look for a suitable launch opportunity and now is looking at "other agencies" instead of limiting itself to ESA's Ariane program. "We're standby passengers," he said. Baker said he's often asked why the space shuttle couldn't launch Phase 3D. He says that's because the shuttle can't put the satellite into the proper orbit.

Meinzer said he thinks the chances "are not bad" that Phase 3D will get aboard an Ariane 5 flight next year. "But also in parallel we should and will pursue other launch options," he advised the Phase 3D team. "Although in the short term we have a problem, in the medium term I am reasonably optimistic. So keep your fingers crossed."

Meinzer said Arianespace put a $10 million price tag on a launch, a figure he called "clearly out of reach." But he also held out the hope that ESA would negotiate further and that the German government might be willing to help with funding.

For the immediate future, Baker said, AMSAT plans now to continue preparations to make Phase 3D flight ready. The satellite is undergoing final construction and testing at the Phase 3D Integration Lab in Orlando, Florida. "Obviously, we will have to evaluate our options on how best to place the satellite in temporary storage," he said.

The Ariane 503 announcement is the latest setback for Phase 3D. AMSAT has been trying to find a ride for Phase 3D for the past couple of years and, until now, had pinned its hopes on the Ariane program. AMSAT-NA was forced to restart its Phase 3D fundraising effort late last year after determining that it still needed at least another $270,000 to meet its share of the Phase 3D costs. More recently, AMSAT-NA has been offering hams--for a $25 minimum donation--the opportunity to fly their QSL cards into space aboard Phase 3D. Participants' QSL cards will be scanned and put on a CD-ROM aboard the satellite.

Baker says it's too soon to tell how the latest turn of events will affect fundraising.

Phase 3D came closest to a launch aboard Ariane 502 last year but was bumped after it could not complete necessary structural modifications in time to meet the launch schedule. The changes became necessary at the eleventh hour after ESA imposed more stringent vibration and stress standards on Ariane 5 payloads.

NEW VANITY FEE SET

The vanity call sign application fee will drop to $13 effective September 14, 1998. That's the word from the FCC's Terry Johnson in the Office of Managing Director. The new fee will be for the ten-year term, payable at the time of application for a new, renewed, or reinstated license. The current vanity call sign application fee is $50. Earlier this year, the FCC had proposed dropping the fee to $12.90. The actual fee was "rounded up," Johnson said.

The FCC says it has no plans to refund the difference between the current fee and the new fee for applicants who submit applications before the new fee schedule goes into effect in September.

The FCC released its revised schedule of regulatory fees for all services for fiscal year 1998 this week, and it's soon expected to be available on the FCC's Web site. The Commission is required to collect almost $163 million during FY 1998.

The FCC calculated the new fee based on an expected 10,000 applicants during FY 1998.

HAMS EAT SMOKE IN FLORIDA

Florida ARES and RACES teams--usually prepared to focus on the annual hurricane season that began June 1--have found themselves dealing instead with tornadoes, floods, sink holes, drought, and, most recently, devastating wild fires in several parts of the Sunshine State.

On June 6, several wildfires spawned by a 100-day drought broke out almost simultaneously in Florida's Flagler, Seminole, Brevard, and Lake counties. The Flagler fire consumed nearly 1700 acres, destroyed 19 homes, and damaged others. As a result, part of I-95 was shut down and the Red Cross set up a shelter with Amateur Radio Support. The Lake and Brevard fire consumed a large area but only minimal damage to homes.

Seminole County Emergency Management declared a state of emergency the evening of June 6. Seminole County EC Dick Fess, K4FUY, activated an ARES-RACES net, and the Red Cross opened a shelter close to the fire zone. Bob Wendoth, KS4CI, and Seminole County ARRL PIO Norm Lauterette, WA4HYJ, set up at the shelter in contact with the county EOC. "Our ARES/RACES direct communication link to the EOC was very valuable," Lauterette said.

Nearly 300 residents were evacuated from the 1800-acre Geneva fire zone, and nearly 60 took refuge in the shelter. "Shifting winds caused the tree-top-high fire to leapfrog in several directions, forcing residents to

flee with just the clothes on their backs," said Lauterette. "Families were split up, some missing, others known to have stayed behind."

In addition to tracking the flames, ham radio operators helped to check up on the whereabouts of individuals, handle medical needs, and report the condition of homes, pets and property. Rescue dog handler Allen Wilson, WB7BCI, also stood by at the shelter with his partner, Duke, if needed. All told, 17 hams volunteered their services in Seminole County. Most evacuees were allowed to return to their homes later the next day. In all, Lauterette and Mike Welch, KF4HFC, report, 54 homes and structures were destroyed in the four Central Florida fires.

Ironically, South Florida conducted its Simulated Emergency Test (SET) the same weekend. Lauterette says the fire duty provided solid exercise for the other emergencies that he's sure lie ahead.

Ten days later, on June 16, Alachua County ARES/RACES responded to a call for communication assistance from the county's emergency management office after brush fires broke out in an approximately 16-square mile area. As of week's end, the fires burned more than 11 square miles and ultimately forced evacuation of the entire town of Waldo, some 1100 people in all. Hams assisted at shelters, in the EOC, and on the scene. At one point, Red Cross had to move a shelter and hams helped coordinate supplies and count heads. In all, at least a dozen hams have participated in the fire emergency.

Jeff Capehart, KE4NIV, an ARES and SKYWARN member as well as a volunteer firefighter, said severe thunderstorms passed through the area in the midst of the fire and evacuation. "Two severe thunderstorm warnings were issued for Alachua County," he said. "Since hams were already at the EOC, a SKYWARN net was activated on top of the ARES net." Capehart says the rain brought some relief and helped to control the fires.--thanks to Norm Lauterette, WA4HYJ; Mike Welch, KF4HFC; Carla Sikorsky, KF4FRE; and Jeff Capehart, KE4NIV

FCC PROPOSES 5.9 GHZ ALLOCATION

The FCC has proposed allocating 5.850 to 5.925 GHz for use by intelligent transportation systems (ITS). The Amateur Service has a secondary allocation at 5.650 to 5.925 GHz with government radar systems and nongovernment fixed satellite service uplinks. Under the proposal, dedicated short range communications (DSRC) highway safety systems would share the band as coprimary users.

The FCC seeks comments on the need for nationwide operational standards and channelization and on the potential for DSRC operations to share with other services.

The June 11 NPRM was in response to a rulemaking petition from the Intelligent Transportation Society of America (ITS America) requesting the allocation on a coprimary basis. Proponents said the band is optimal for DSRC on the basis of propagation, consistency with international allocations, and compatibility with existing users.

ITS America, a nonprofit organization dedicated to promoting ITS, has worked with the ARRL and others to develop a sharing plan. The League has said it is prepared to work with ITS entities to resolve spectrum sharing issues.

In its comments, the ARRL questioned whether the 5.9 GHz band was appropriate for DSRC and urged the FCC to look into frequencies above 40 GHz, where DSRC systems could avoid interference from other users. The League said the ITS proposal and the FCC decision to deploy unlicensed National Information Infrastructure (U-NII) devices in the band could render 175 MHz of spectrum in the 5.8 GHz range significantly less useful to hams.

3M, a DSRC proponent, argued that hams could be displaced from the band because they already have plenty of spectrum between 50 MHz and 50 GHz and make only light use of 5.9 GHz. 3M suggested a powerful amateur station could "swamp out" DSRC services.

The FCC said interference problems that might crop up could be resolved by changing the frequency of the amateur operation, by power reduction, or by using directional antennas.

Possible ITS applications include what's known as automated roadside safety inspection. This would permit transmission of vehicle safety and other data between roadside inspection stations and commercial trucks moving at highway speeds, the FCC said. Another potential application, incident management operations, would use roadway sensors and DSRC-equipped vehicles to more quickly detect traffic congestion and dispatch any emergency personnel or take other action. Other emerging DSRC applications include traffic control and en-route driver information systems.

ITS DSRC transmissions would be "narrowly focused and rapidly dissipating signals," according to ITS America. The FCC proposes a maximum of 30 W EIRP for DSRC systems.

Comments on ET Docket 98-95 are due 75 days after publication in the Federal Register. The complete NPRM is available on the FCC Web site at http://www.fcc.gov.

FCC ASKS GERMANY TO SILENCE BROADCASTER ON 3945 KHZ

Sometimes it helps to complain. The FCC's High Frequency Direction Finding Group has asked German authorities for their help in eliminating a broadcast station in Germany that's operating on 3945 kHz. Members of the ARRL Monitoring System (MONSYS) and other US hams had complained to the FCC and to the ARRL about the station's presence. Those complaints were forwarded to the FCC. The frequency is not allocated for broadcasting in Europe, which is in ITU Region 1. In Region 1, the 3900 to 3950 kHz band is authorized for aeronautical mobile operation. In the US, in Region 2, the band is allocated to amateur, fixed and mobile.

"Since this station is a source of daily harmful interference to the Amateur Service, we would appreciate any assistance you could provide in eliminating the interference," said Chief Watch Officer/HFDF Group David Larrabee, K1BZ, in a fax June 11 to the Bundesamt fuer Post und Telekommunikation (BAPT), Germany's equivalent of our FCC.

The station on 3945 kHz, identified as The Overcomer Ministry, has been monitored at several East Coast locations as well as by the FCC in Columbia, Maryland. It broadcasts on AM from Juelich, Germany.

K1TWF APPOINTED NEW ENGLAND VICE DIRECTOR

ARRL President Rod Stafford, W6ROD, has appointed Michael N. Raisbeck, K1TWF, of Chelmsford, Massachusetts, as New England Division Vice Director. The appointment is effective immediately. Raisbeck will complete the term of former Vice Director Don Haney, W9WW (ex-KA1T), who resigned when he moved out of the division earlier this year. The term expires January 1, 1999.

Raisbeck is vice president of Ready-to-Run Software Inc, with duties in corporate management and as general counsel. His wife, Susan, is WN1V. Raisbeck graduated from Northeastern University in 1976 with a bachelors degree in electrical engineering, from Suffolk University Law School in 1981 with a JD (cum laude), and from the University of Massachusetts in 1989 with a masters in engineering management.

Raisbeck is fluent in Italian and has a working knowledge of Spanish. He'll attend his first ARRL Board meeting in July.

Members may contact Raisbeck at 85 High St, Chelmsford, MA 01824; e-mail k1twf@arrl.org.

I have been thinking that the regulatory power over guns should be
given to the Department of Defense. Treasury just does not seem
to care about the need to defend the country. If we are to remain a
free people, we must be trained and disciplined.

Too many of those entering the military and law enforcement can not
shoot. I have female officers that have problems yearly trying to qualify.
There just is not a broad enough base of knowledge among the population
of how to shoot.

And, as amateur radio operators have seen in their own ranks, the American
population is very undisciplined, self focused, self rightous and very
childish.
From a military view, these two factors are going get some young folks
killed.

We need to bring back the Draft.

pig vomit is a real loser. Listing domains is the only thing that he can do or say. That truly is the great sign of a true loser. Like posting domain info is going to do anything. The only its going to do is allow us all to see what kind of idiot pig vomit really is. I firmly belive that this idoit needs to stick a gun in his mouth and pull the trigger! He is mentally unstable. He needs one of those rubber room doctors. I think that pig vomit needs to be on Thorizean, and Xanax instead of beer, pot, and cocaine (crack a cheap form of freebase cocaine). I truly think that there is no help for this poor fat beer sucking drug abusing slob. What pig vomit really needs is the assidance from that Dr death dude from Michigain, but thats just my opinion.
I do belive that this person is so lost that in his own house he would need a map to find the bedroom. Mind you the bedroom and the front room are in the same room. He might need a map to find the bathroom since his trailer has no indoor pluming and the out house shared by three other trailer dewlers in the same trailer park. A true sign that one is a loser. I guess he can sell more dope in Paulding County GA, that way

he can get a new car and go back to see Bubba. I geuss then the bowling pin will be driving a new car, and pig vomit will be in jail with Bubba. Aw the another happy ending. What if the state invokes the Rico act. All is not lost pig vomit will still have Bubba.

WHat NoCoDe???!
God that will be the end of ham radio. Soon we will be hearing 10-4
their good buddy and instead of calling CQ we are going to hear how bout
it skipland. OH BOY A GREAT BIG CB BAND and I geuss channel 6 will be
3.894.5 and 19 will be 14.313. A signal report will be hey your given me
7 pounds. Heck pig vomit all ready talks like he is on channel 6, when
he is on 75 meters. I geuss its just a matter of time before the hobby
self destructs. It will be your fault ARRL!

I've got several items for sale.

I'm located in Houston, near the summit, but
I will deliver anywhere around town.

Wilson 1000 10 meter/CB antenna with trunk lip mount - $40.00

Motorola 60 watt 2 meter amp - $50.00

Mag-mount CB antenna - $5.00

Mag-mount 2m/440 antenna $10.00

Email me if you want any or all of the above.

As I noted, this problem isn't a result of a political initative. It was brought about
by ARRL petition. That's the way most amateur rules changes occur. So rather
than watching the politicians in Washington, you'd do better watching those in
Newington.

On the subject of McCain, I find his brand of do-gooderism just as obnoxious
as that of Ted Kennedy. McCain tries to use the tax laws as a way of enforcing
his ideas of morality rather than using more direct federal bureaucratic meddling,
but the effect is the same. The power to tax is the power to destroy. The end runs
around the Bill of Rights are almost always couched in terms of taxes. That's
why the end run on the Second Amendment is administered by Treasury. It is
done in the guise of the transfer tax stamp. Ditto alcohol and tobacco. Spectrum
auctions are just another way to tax. Bad policy, bad law.

Yea, I'll explain it pea brain, 1000 miles away the sun is still shining,
ever notice that you get propagation to the west during the evening on 10m,
by that time propagation to Europe is all but gone, ya see boy, that's cause
the sun aint shinin no more in Europe. Didn't they teach you that in your
Freebander Class, Lesson 4 "How to talk skipland" You must have missed it.Now
go run some power down on 11m so you can 'tighten up' your Lamberts. heee
heee what an idiot.

5304. FS: TekTronix O Scopes

Newsgroup: rec.radio.amateur.misc

5305. Burt is actually HAPPY!!!!! re: something ridiculous...

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-21 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6mimav$ab3$1@w3eax.umd.edu>

I now understand Burt's agenda!

I feel SOOOO valuable now that I, in enjoying ham radio, have taken
away Burt's enjoyment...

or, on the other hand, I've succeeded him in allowing him to enjoy himself
more by increasing his displeasure with ham radio!

Why? Burt likes to be upset and discontented!

Either way, most hams have enjoyed themselves, and have apparently
allowed Burt to enjoy doing what he does most and best, which is
feeling miserable, demeaning people, and complaining about everything!

Well done, fellow amateurs!

Carry on! By all means, exercise the privileges granted you with
reckless abandon, with full knowledge that everything you say further
increases Burt's discontentedness...which makes him happier! Cool!
